>
>In other word, is the code requirement a band requirement or licensee
>requirement?

It's a service requirement.

The treaty says that anyone who is licensed to operate an amateur radio station
must pass the code test if the license grants any privileges below 30 MHz.
Nothing about power level, mode, etc.

>Why would a person need CW proficiency to use a band the bars the use of >CW?
>
It's only needed if the station is an amateur radio station.

Consider this: Why do hams have to take written tests on radio theory in order
to use manufactured, certified equipment? Many other users of the spectrum
don't have to. No test or license required to run low-power AM or SSB on 11
meters, but to use the power SSB on 10 meters requires at least a Tech written,
and to use AM anywhere on amateur HF/MF requires at least a General written.

If/when the code test goes away, those writtens will still be in place.

Actually, you can make a nice corner reflector for it from a cardboard box and some aluminum file. Much more portable than a 12 foot dish. Given time, they'll likely put something into the rules (I believe they outlawed a passive reflector type device - essentially an antenna which would re-radiate police radar frequencies much more effectively than an untuned body - which had a diode which had an audio signal fed to it. This modulated signal would be recovered by the radar set and see the modulation much more strongly than the Doppler effect so you could set the speed the cop would see). The radar fooling apparatus is *not* a transmitter, but they did cover that. As of now, the antenna is not removable; therefore the device (unmodified) is legal. What can they say about a cardboard box with aluminum foil in it? They probably never will, since the slight increase in forward coverage is more than made up for by the total lack of coverage behind the corner reflector (your total area coverage would most likely be much less - but it would be further in the forward direction, but not by much. Line of sight pretty well limits that).

CB is not amateur radio. CB as we know it was a big mistake that
the FCC didn't want to admit making and couldn't undo because it was
too late. IIRC the Dutch undid CB my making examples out of those
who refused to stop operating after it was banned in the early 1970s.

>In other word, is the code requirement a band requirement or licensee
>requirement? Why would a person need CW proficiency to use a band the
>bars the use of CW?

It's a licensee requirement. Perhaps the FCC feels that non-code
folks are not qualified to operate there. Perhaps the moon is made
of green cheese.

In regulatory law, one does not ask "why", one asks "how". This is
reality.

Sure there is. When you did that you just drastically modified the antenna and made it a high gain array. VERY illegal.

>It may FRONT as a "legitimate" business, but if it's processing "unrecorded
>acsh", it's NOT "legitimate".

Let me try to explain it to you. Its a legitamate business that sells a
product. The customer pays cash or credit card, usually cash. The worker
doesn't record the transaction and keeps the cash. This makes it unrecorded
cash. Thats stealing from the company.

>One
>>way
>>is they could charge the customer more, and record a lower amount, and keep
>>the
>>difference.
>
> ...and is still just as illegal.

This particular example is NOT illegal. This happens, for example, in a
restaurant. If you pay the waiter a tip, it is extra money for that person, not
to the restaurant.

However, this type of business is not the type of business where one receives
tips. Also, the difference is that the customer did not give a tip - the person
charged the customer more.

>>The current manager warned me that this is a risky job. My pay will be tied
>>to
>>how well I keep track of and control the transactions.
>
> ...and how well you manage to evade "the silver bullet".

What's "the silver bullet"?

It seems to be a new thing. Well actually it's just an extension of the
old thing " If you can't be as good as they are, demean everything they
can do".

I thing it is a pop culture thing, and the celebration of failure.
Funny, because that is exactly what it produces... failure.

>Yeah, Vipul. To a guy like you, life is full of inequities.

I obtained good grades in difficult rf specific courses. Unfortunately, the courses were not of good quality. I saw some good rf courses, with a lab, at Ohio State.

>> Yes, code is worthless.
>
>You have no way of knowing if it is worthless or not.

It may be useful for some people. It doesn't deserve to be in between a license class.

>How do you know you'll never use them again? You haven't lived your
>life yet.

Several years later, I've never used them. It's common sense that some topics are not useful. I know I'll never run across the situation where I do need to use that subject.

Also, the topics that I wrote down before I started college, I seem to run across those often.

>You can start by demanding a refund for those EE classes. That story
>about fluorescent lighting in automobiles indicates that you didn't get
>your money's worth.

Its part of building a Ham station. That could be useful to some people.

>> Also, courses should be evaluated on their
>> usefulness.
>
>...as determined by you?

Well, politicians should not determine it. One example is some courses to improve MCAS scores, as recommended by a politician. Also, just school administrators should not evaluate them. I believe teachers that know their

subject material, and are allowed to use non-traditional method (as long as it helps understand the subject), would help.

Also, don't exclude certain experts, for example people that worked in that subject for many years, and may know more than Profs that never worked in their field, just because they couldn't get a teaching certificate.

>Many
>universities are, in reality, private educational companies.

Once you are enrolled in that college, you cannot take a private education course that competes with the school's course, and get college credit for it. I've seen private companies offer C classes for lower cost than what universities charge, probably at the same or higher quality. But because the school was not accredited, you received no college credit for that course.

Schools get accredited, not courses. A school with all bad courses CAN get accredited. It has happened. You won't receive credit for a good quality course if the school is not accredited.

>.not in a theatre full of people expecting to see "Othello" and who
>instead are treated to the sight of a guy changing a tire.

If you have seen some recent plays, you would be surprise that some have "common" people stuff. You may see a person changing a tire. But, that's another subject.

>> Tires do not listen to Shakespeare.
>
>Apparently neither do you. You and tires have something in common.

That's a good one!

>Who the hell takes a camping course?

I wanted to learn some of the stuff traditional education does not teach. It was a private company. Unfortunately, they were very school-like and taught by lectures, more than experiences. The experience way is better.

The DXpedition I went on last month with some Hams turned out to be much better learning experience for the camping skills I was trying to learn. They should have DXpeditions, operating radios on several modes, for the camping course.

>> It takes a village...
>
>...and in the village, you'll find a school. Let your children go there
>and interact with other children. They'll be much better for it.

You may find a set of traditions, culture, and real purpose. Something that you can't learn in school. Something that school takes away from you.

But why am I going to buy a 6 meter rig to talk local. I think one of
the reasons we have 6 meters in the first place is that it is such an
unrelaible band. That may be the fun of it for some hams, but for
business use, they would have to use it for local use, then put up with
occasional major intereference from everyone else on that frequency.

> And I probably will be the first to say, "I told ya so!"

Sure enough. Problem is, the really high band's utility for most
amateur type work are pretty limited. I enjoy the articles about how so
and so conjured up some rig to talk to his buddy across town, and the
gargantuan efforts to set distance record between a few hams, but that's
about the extent of the people there. It is a fertile ground for short
distance comms, how many do we need? If we were on the air in droves

there, I would take up a "my cold dead fingers" approach. But we're not, and I'm not going to become an experimenter at those freq's just to camp out there.

>rate. So which way is it?

You are right. In general one does not unlearn things.

This is a special case where one unlearns something as a result of learning something else (actually the same thing at a faster speed). This occurs when one tries to memorize a real-time sequence. A teacher (not a Morse code teacher), told me that this can occur. It has happened to me, on occasion.

>>They were unable to do that because they were not taught that in school.

>are adolescents, and do not have enough life experience to realize that
>what may not be of any use now, might be a real lifesaver later.

I can ask a very old person whether certain subjects are useful and that person
probably will agree with me.

>And what is better, to learn something that you
>may never use, or to miss learning something that becomes of critical
>importance just because at one time, you KNEW it was of no usful purpose?

How about something I knew that <would> be useful, but I could not learn
because it did not fit into the required courses according to traditional
educational criteria?

2305. Respect For Freebanders

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-10 03:25:39 UTC

I am posting here because of some of the nasty things I have read in this group and in QRZ discussions regarding freebanders. We who use the frequencies from 27.405 to 28.000 have more in common with hams than you might think. We are good operators and have knowledge of propagation and skip conditions. We use Yasus, Kenwoods and Icomm radios just like you do, so we know technical issues as well or better. However, the attitude of some hams toward us is rude and condescending. We are treated like 2nd class citizens. This should not be. We have the same rights under the constitution as legal hams do. For those that do not wish to be under Uncle Sam's thumb, freebanding is a viable alternative to getting a ham radio license. What I am saying is that maybe the next time you meet a freebander it might be wise to talk with him before you condemn him.

This article ought to clarify things, as I am the author:

By the experiences they have had. In the aggregate, experienced people can have a good idea of wwhat is needed.

And your response to me indicates that logic wasn't used at all.

But then again, maybe your new best friend understands what you are talking about! ;^)

Some of that is not even a "celebration of failure". Some of the music has no message at all! One sentense has no relationship to another. They just use a bunch of rhyming words with music.

Similarly, many movies are becoming that way. Seems like some of the dumbest movies often have high box office sales, while meaningful movies sometimes don't. They will keep getting that way if the public keeps buying that way.

I think he's desperate to attract one, "preety" or not so he can get
started on producing those children he intends to home school in only
worthwhile (to him) subjects. I envision a pack of mini-Vipuls, able to
change tires and tie knots but who won't have an inkling of Huxley or
Steinbeck.

I learned that in High school. We had a course in which we were taught
that. Took about one class and a quiz. You can learn the same by talking
to your stockbroker.

>>I've never heard of a high school or university course in the handling
>>of travelers checks.
>

> That's right. They don't. They should.

We had a course in that when I went to high school too. Took me about
ten minutes to learn. Having a specific course in it would put me to sleep.

As I recall, you haven't met the right "preety fem" yet either. You'll
have plenty of time after finding someone who agrees to marry you and to
bear your children for both the kids and you to grow.

You have no way of determining that.

> > >How do you know you'll never use them again? You haven't lived your
> > >life yet.
> >
> > Several years later, I've never used them.

Life is a long road. I never used geometry for years then--BANG! I
needed to calculate the length of some guy wires. I never thought I'd
need Joseph Conrad again until some "preety fem" sitting next to me at a
dinner asked what I thought of "Heart of Darkness".

> It's common sense that some topics are not useful.

Not YOUR common sense, it isn't.

> I know I'll never run across the situation where I do need to
> use that subject.

I just KNOW that you're incorrect.

> Also, the topics that I wrote down before I started college, I seem to run
> across those often.

That seems right. If you write down "pop music" and then proceed to
listen to nothing but pop music, you've got yourself a self-fulfilling
prophecy.

Why couldn't they get a teaching certificate?

> >Many
> >universities are, in reality, private educational companies.
>
> Once you are enrolled in that college, you cannot take a private education
> course that competes with the school's course, and get college credit for it.

Got some news for you. If you enroll at Joe's Computer School, Joe
isn't going to give you credit for anybody else's courses either.
You can, however, transfer credits between accredited schools.

> I've seen private companies offer C classes for lower cost than what
> universities charge, probably at the same or higher quality. But because the
> school was not accredited, you received no college credit for that course.

Lower cost and maybe better quality (but you don't know)...Why not just
take the courses and skip the credit if superior (maybe) quality and
saving a few bucks is what is important to you?

> Schools get accredited, not courses. A school with all bad courses CAN get
> accredited. It has happened.

Please provide an example. Show your work.

> You won't receive credit for a good quality
> course if the school is not accredited.

No kidding? That still seems okay if the school teaches broadcasting
and all I'm interested in doing is learning the necessary skills to work
in broadcasting. I'd likely seek an accredited school if I wanted to
teach broadcasting.

> >.not in a theatre full of people expecting to see "Othello" and who

Ask an old, coherent person who has been successful in life and I
believe you'll find a person who does not agree with you. That person,
after speaking at length with you, may even grow fearful. Try not to
alarm the old people you encounter, Vipul.

> How about something I knew that <would> be useful, but I could not > learn because it did not fit into the required courses according to > traditional educational criteria?

I've learned a number of things which I've found useful but which were
not taught in school. I learned about them on my own. Can't you do the
same? Your education doesn't stop after class or after you've completed
school.

Using a radio made for radio amateurs does not prove that you know
anything about technical issues at all. By the way, it is "Yaesu" and
"Icom".

> However, the attitude of some hams toward us is
> rude and condescending. We are treated like 2nd class citizens. This > should not be.

You are second class citizens. You are lawbreakers. You have not taken
and passed any license exam.

> We have the same rights under the constitution as legal hams do.

Sure you do. If licensed hams broke the law as you do, they'd face
similar penalties.

> For those that do not wish to be under Uncle Sam's thumb, freebanding > is a viable
alternative to getting a ham radio license.

I don't know of any U.S. hams who feel that they are "under Uncle Sam's
thumb". I don't know why anyone would rather operate illegal equipment
on illegal frequencies when it would be a simple matter to pass a
licensing exam for those of you familiar with "technical issues".

> What I am saying is

Hmmm...I thought the FCC is headquartered in DC.
A few at the FCC do have amateur radio licenses;
Riley Hollingsworth is one of those.

>> YOU are welcomed to explain why you keep stalking licensed Amateur
Radio
>> operators online and making such obviously and patently false accusations
about
>> them.

I don't have to answer any baseless charges made by some
PCTAs who refuse to accept the fact that there are differing
opinions on the code test issue...and insist that all such
differing opinions are "insults."

As to "stalking," I'm not the one stalking any posting I
make. That's a licensed amateur.

I've made no "false accusations" as to the stubbornness of
some PCTAs' refusal to accept any viewpoint other than
their own. It's on public view.

The existing arguments in favor of code test retention are
NOT valid.

The only "validity" is that the already-licensed extras had to
take such a test and they seem to insist that everyone else
must do so, too.

That's just emotional self-righteousness of a very personal
kind, not at all applicable to the US agency that grants such
amateur licenses.

You'll excuse me while I laugh out loud at the idea of your making such
a judgement call. After all, you aren't involved in amateur radio.

> The only "validity" is that the already-licensed extras had to
> take such a test and they seem to insist that everyone else

I haven't seen that as a reason for retention of morse testing. I note
that YOU trot it out periodically.

> That's just emotional self-righteousness of a very personal
> kind, not at all applicable to the US agency that grants such
> amateur licenses.

How do you deal with the your appearance of emotional self-righteousness
in promoting your views as a non-participant in amateur radio?

Your opinions have not been held to be insults. You've frequently inserted the insults along with your opinions on morse testing. On occasion, you hurl insults at amateur radio in general, at the ARRL or at individual radio amateurs who disagree with you.

> I've made no "false accusations" as to the stubbornness of
> some PCTAs' refusal to accept any viewpoint other than

The problem is that few in the academic world ARE experienced
in the field that they teach. The vast majority of the electronics
instructors in college is that they are way behind on electronics
technology used in industry or found in the marketplace.

Few instructors of political science have actually run for any
government-level elective office. Few instructors of economics
have used their "knowledge" to advance their own finances.
Few instructors of history have ever set any history. :-)

Students have to sit politely in classrooms and do their
assignments obediently in order to secure the grades that will
allow them to eventually graduate. They also are required to
respect their instructors no matter what...without that they
get tossed out of class with loss of credits.

I once took an extension course in digital logic at a large
junior college here in Los Angeles. The instructor had about
a tenth of the work experience I had at the time and his "industry
examples" were at least 20 years old. Some of his class rules
were quite strict such as never, ever thinking of an Exclusive-OR
gate as a gate. Ex-ORs had to always be drawn made up out of
ANDs and ORs and Inverters. He refused to unbend from that
militant ruling despite being shown a Texas Instrument TTL
package long on the market containing 4 Exclusive-ORs. All of
us students had to work according to His rules on that. This
instructor had a control-freak personality but one had to be nice
to him or risk loss of credits. No real learning in such classes,
none that couldn't be had from 20 year old textbooks carrying
the same information.

Extension courses don't normally count for degree credits but
they should be taught to the same standards as in all classes
and with reasonably up-to-date curricula.

> And your response to me indicates that logic wasn't used at all.

Your response indicates that you are just another hopping on
the Hate bandwagon of Bwahahah and the Colonel, stalking
all who don't conform to their idea of an amateur. <shrug>

> But then again, maybe your new best friend understands what you are
>talking about! ;^)

Who would that be? I have several good friends and one was
Best Man at my wedding...W6MJN.

One problem with US amateur radio is its demographics indicating an overwhelming majority being white males of Judeo-Christian religious beliefs. Such hams will have great fun putting down anyone not of Anglo-Saxon ancestry or "western" ethnics.

No "western" given name? Oh, wow, great opportunity for calling such all sorts of depreciatory names, making fun of them for not fitting in with "being American." That's getting more typical every day in US amateur radio.

FM to
>distract the consumer from his baby television. Monday morning quarterbacking
>would suggest that if Armstrong mentioned that FM would make an awesome
soundtrack
>for television to Sarnoff, maybe the confrontations and such might not have
happened ....
>Sure.....

The black-and-white TV standards in the US were developed before
WW2 by an industry group. It specified FM for the sound carrier.
The FCC accepted that. Neither Armstrong nor Sarnoff had much to
say about it. US radio-electronics industry said it and specified it.

After WW2 and after the CBS-RCA technical fight over color TV
standards (both were bad for the market), industry again did their
thing on standards. The NTSC came up with the compatible color
system that allowed old B&W receivers to get color TV images in
black and white. Sound carrier remained FM just as the prewar
US TV standard.

RCA Corporation's huge color TV campaign for the NTSC system
meant RCA corporate income in everything from TV receivers to
broadcast equipment (they "owned" the market on TV studio

cameras in the 50s and 60s). Sound-only broadcasting was a
much smaller economic environment in the post-WW2 period.
The USA already had thousands of AM BC stations and the
quality music through FM BC was limited to those involved in
"high fidelity sound." The market wasn't as large for only sound
but picture-and-sound had mass appeal.

>> If it is any consolation, remember that Sarnoff was a morseman
>> and that RCA Corporation was a creation from part of General
>> Electric...the same corporation that bought RCA in the 1980s.
>> :-)
>>
>You mean raped and pillaged. I was there. Wasn't a pretty sight :(

I was employed by RCA Corporation 8 years and RCA's only
West Coast division split up and sold before the GE acquisition.
It was just another hiccup in local aerospace, not the "rape or
pillage." Stuff happens.

The assumption is always that Ed Armstrong was a wonderful guy
sort of genius. He wasn't. He was a mover and shaker himself
and had a sizeable ego and temperament. He wasn't all that easy
to get along with if you didn't go along with him, according to many
who did go along with him. Genius, I would say, but not the sort
to be any sort of saint. Armstrong could never have gotten his FM
network started without those qualities of his.

David Sarnoff was a businessman first and foremost. He had the
knack of recognizing good potentials for investment and profit
in the future. [that didn't get passed to his son Robert...]
In the post-WW2 period, Armstrong had traded his superregen
patent rights for a big block of RCA stock (Westinghouse had
already bought rights to Armstrong's other patents before WW2).
By 1960 there wasn't much chance of a superregenerative
receiver having great profit potential for RCA...conventional
superheterodyne receivers were already working well at VHF for
FM BC reception. Armstrong's superheterodyne patents were
already losing ground on licensing due to expiration (superhet
patent was granted 1920 and renewable once, would expire in
1954). All Armstrong had going for him was his fledgling FM
network and he was up against other networks besides NBC.

Sometimes the "heroes" wind up with all sorts of clay things.

Maybe some of the condemnation is directed at the activity (which
happens to not be legal) instead of the person doing it.

You may be a nice guy, understand radio theory, be a good operator,
etc., but you are still breaking the law.

And if you'd disregard one law, chances are you might just disregard
many. So how do you expect to gain any respect from people when
you openly admit to being a criminal ?

The ARRL requested the 60M band allocation for domestic use only.

For domestic use only, the code requirement does not apply. See: Japan.

Freebanders operate traffic nets and emergency service nets.
They also use data modes. They are good at what they do,
maybe better than hams. Now, hams may not like this, and
this activity may not be legal, but that doesn't change the fact
that it is happening and has been happening for decades.
Freeband activity, in fact, is on the rise. They are moving into
ten meters in ever increasing numbers. Now if you think the
FCC or anyone is going to stop that trend, I've got a bridge you
can buy and some waterfront property in Nevada.

(This space reserved for hams to foam at the mouth and jump
up & down while having a fit and throwing a tantrum.)

Slim,
standing by on 27880 khz
Mountain States Traffic Net

Sounds like you don't want anyone to read it, Len.
>
> >Seems to me there are two threats to amateur radio here:
>
> The article had NO "threats to amateur radio" since amateur radio wasn't even mentioned.

Faulty logic on your part, Len. The mere fact that a radio service isn't mentioned doesn't mean there's no threat.

> Only three specific user groups were cited: Cellular telephony, military radio, and public safety users (police, fire). The World Radio Conference beginning shortly in Geneva was briefly mentioned in the LA Times AP article printing.

From W hisself:

"We must unlock the economic value and entrepreneurial potential of U.S.
spectrum assets while ensuring that sufficient spectrum is available to
support critical government functions."

"unlock the economic value and entrepreneurial potential" can mean anything from some minor rules changes to wholesale reallocation.
"U.S. spectrum assets"
doesn't exclude the ham bands.

The threats are there, for anyone unbiased and realistic enough to see it.

But then again, you're not involved, Len.

Absolutely! Mountain States Net is just one of several regional
public service nets where many local government entities check
in on a daily basis.

>
> > They are good at what they do,

This county has many bad laws on the books which remain
on the books and are simply not enforced. Nothing is done in
the shadows. Stations check in using valid names and locations,
and other valid identification.

>
>

>

> You wish. Most of them have gone to the Internet.

No, I don't wish. Do you? And internet will not
work to provide the service and emergency applications
being accomplished by nets. Hams argue that point
every day. Don't they?

>
>
> > They are moving into
> > ten meters in ever increasing numbers.
>
> And that may well be their Waterloo....look it up.

Where? In a phone book? Anyway, most of the
nets operate in Freeband, which is why other stations
are taking over the ten meter band. Guess if the hams
don't use it, they'll lose it.

>
>
> > Now if you think the

The man has a good point Brian. I dont think all...but I think a large
percentage of 'previous occupants' would continue to use the band. And the
FCC catching them would be nill. Just like the zoo of 11 meters.

Only way to shut em down would be to hunt em down and do it that way.

DX> Net and stop your whining and complaining. Hams are the ones who
DX> are always saying we need to perform "public service." Right?

If it's illegal to transmit on those frequencies in those modes with
that equipment without an amateur radio license, then it's illegal.
It may be condoned by some of the authorities, but it's still illegal.

I confess ignorance to the proper definition of the term "freeband",
but I'm going to go out on a limb and say it's "citizen's band" based
on the frequencies I saw mentioned. I haven't studied the approved
modes for those frequencies, but I'm almost positive that voice (or
phone, this nickel Extra always gets those confused) is the only
permitted mode, and that packet is not permitted. Also, I'm pretty
sure that only equipment that is type-certified for CB is allowed to
be used for CB. Is that the case, or am I mistaken?

If you've got the hardware and the skills, why not just make your
operations perfectly legitimate and get your amateur radio license?
It's obvious that you've made a commitment to operate and you have an
interest in operating well with others and in public service. The
added effort is minimal, and it opens up many other avenues for you to
explore. If your main reason is that you will no longer be able to
operate with your peers, the obvious response is to have all of you
take your tests together.

I suspect the FCC would prefer to have a dozen new hams working
together pursuing goodwill and public service than complaints about
people using the wrong equipment on the wrong frequencies in the wrong
modes. Heck, you might even have a net positive impact on the people
in this newsgroup, and that alone would be pretty impressive to me.

>
>For domestic use only, the code requirement does not apply. See: Japan.

Actually, the code TEST requirement applies to administrative
license granting, does not apply to any specific bands other
than "operating privileges below 30 MHz.".

The FCC could have allocated use of the five 60m frequencies
to all US amateur classes without upsetting anything in S25 as
it is written now. There are no ITU-R recommendations specifically
forbidding amateur "classes" anything. There are NO ITU-R
statements concerning "classes" of amateur licenses.

License regulations and allocation of use are disparate subjects.

>inserted the insults along with your opinions on morse testing.

No. Your own self-righteous opinions forbid any opposing
viewpoints from being anything other than "insults."

You continue to stand in Judgement over others of differing
viewpoints. That is the mark of the self-righteous.

>On
>occasion, you hurl insults at amateur radio in general, at the ARRL or
>at individual radio amateurs who disagree with you.

I've not "hurled insults at amateur radio in general." Some
individuals in here self-righteously identify all of US amateur
radio as having the same opinions as theirs. That is obviously
not true but those poor, thin-skinned righteous defenders of
their faith cannot be convinced otherwise.

>> I've made no "false accusations" as to the stubbornness of

>You'll excuse me while I laugh out loud at the idea of your making such
>a judgement call. After all, you aren't involved in amateur radio.

That doesn't answer the question, despite trying to masquerade
as "Jim, N2EY."

The FCC is NOT INVOLVED in operating amateur radios. They
just regulate it along with every other US civil radio service.

The demand to BE INVOLVED or shut up is a bogus one, just
another excuse to attempt winning message points. The BE
INVOLVED argument, if a requirement for determining new
amateur radio regulations, would itself be unconstitutional as it
applied to free speech guarantees under the constitution.

The BE INVOLVED criterion is bogus self-righteousness that
pretends that only those already licensed be allowed to discuss
anything concerning getting into US amateur radio.

Your amateur radio license does not convey any special
conditions that only you or any other already-licensed citizen
are the only ones permitted to discuss getting into amateur
radio.

You do NOT run the FCC, do not have any censorship powers
on who may discuss what in regards to federal regulations.

>> The only "validity" is that the already-licensed extras had to
>> take such a test and they seem to insist that everyone else
>> must do so, too.
>
>I haven't seen that as a reason for retention of morse testing. I note
>that YOU trot it out periodically.

It is inherent in nearly all of the comments made on NPRM 98-
143 in favor of the code test retention. It is "turf," the Territorial
Imperative, "squatter's rights" sort of idea that having been
licensed a long time gives you some special rights over and
above others.

Few long-time radio amateurs will admit such an opinion openly,
yet so many insist that all newcomers meet THEIR criteria in
what a "ham" should be. THAT is your continuing self-
righteous opinion.

>> That's just emotional self-righteousness of a very personal
>> kind, not at all applicable to the US agency that grants such
>> amateur licenses.
>
>How do you deal with the your appearance of emotional self-righteousness
>in promoting your views as a non-participant in amateur radio?

I'm simply stating an opinion on the morse code test necessity,
that it should be abolished. It would seem that such an opinion
grates mightily on your own self-righteous opinion that all should
do the same as you did because you had to do it. That's not a
valid reason for retention of antiquated regulations.

The bogusness of the BE INVOLVED criterion shines above. You
took a morse code test long ago and passed. You are unlikely
to ever have to surrender your amateur radio license grant and the
grandfathering clauses will insure that you never have to take any
test again, provided you keep renewing your amateur license. Yet,
you keep insisting that all newcomers do the same as you did and
attempt forbidding others from talking differently about such test
regulations.

You are NOT with the FCC, you have NO power to override the
Constitution of the USA despite your license. It's fairly obvious
to everyone else that all you are doing is simple dictatorial
controlling - by whatever method, unethical, immoral or
otherwise - in short, to be some kind of self-proclaimed Boss.

No, emergency power generation is part of building a Ham station. Please pay attention.

>> Schools get accredited, not courses. A school with all bad courses CAN get
>> accredited. It has happened.
>
>Please provide an example.

Several schools have an insufficient number of graduate courses for each major, and they do have full time programs.

I don't like to name names, but Brooklyn Polytechnic, is one example. Their program of graduate full-time EE courses is particularly bad. You must take several UNRELATED courses together to graduate. Remember, in graduate school, the purpose is to specialize, not take BSEE courses again.

And the courses are located on three different campuses that you have to travel to get to. Someone didn't figure out that it makes more sense to group the same specialization at the same campus.

And the quality of the individual courses there is bad too. And yes, surprisingly, they are accedited.

>The experience way is better.

>
>The ARRL requested the 60M band allocation for domestic use only.

Sure - but is there any domestic-use limitation in the R&O?
>
>For domestic use only, the code requirement does not apply.

Incorrect!

The requirement has to do with the license, not domestic use. It also
specifically requires a General or higher license for hams to use 60 meters.

> See: Japan.

Incorrect! Japanese amateurs are not limited to domestic use only.

Here's how the Japanese sytem works (reposted many times). This is Japan's
argument, not mine:

Japan issues ham licenses with HF privileges but with no code test. These are
"4th class" licenses, and Japan uses the following argument to justify not
having a code test for them:

1) The purpose of the ITU treaty is to avoid harmful interference and to
promote orderly use of the radio spectrum.

2) In regards to Japanese amateur radio, two kinds of harmful interference need
to be dealt with: interference to non-amateur radio services of all countries,
and interference to non-Japanese radio amateurs.

3) 4th class Japanese hams' HF privileges are only on frequencies that are
worldwide exclusive amateur, so interference to nonamateur sevices is
prevented.

4) 4th class Japanese hams are only allowed to use very low power on HF (10 watts PEP, as I recall), and Japan is an island nation, so harmful interference to amateurs of other countries is avoided.

Thus, Japan says it is not in violation of the treaty, because its measures re 4th class licenses meet the goals of the treaty. You may not agree with Japan's reasoning, but to my knowledge no other country has challenged Japan on it in at least the past 35 years.

Note that the other three classes of Japanese amateur radio license DO require a code test.

Note also that Japanese 4th classers only have privs on freqs that are worldwide exclusive amateur. (See 3), above). That leaves out 60 meters.

If/when the code test is eliminated, a General class or higher license will still be required to access 60 meters unless the rules change.

It is interesting to note that the idea of a 60 meter band was actually supported by the NTIA. When ARRL formally proposed it, FCC unanimously agreed to give US amateurs a band at least 150 kHz wide, and use of lots of modes. Only after the comment period was over did NTIA register opposition to the idea.

Why should a high school or university offer a course in handling traveler's checks? Anyone that is dumb enough to need such a course is too dumb to learn the material anyway.

then if you have the backing of your local government you shouldn't mind identifying with a real name and email address??? how about giving us a few specific references of 'local government entities' that check into your net??

not going to do it?? why not? you don't seem to think that the fcc cares about you. how about the hams operating on illegal frequencies that have been contacted recently... since you can't seem to figure out where to look it up, start here:
http://www.arrl.org/news/enforcement_logs/
and the new fcc/arrl push... see:
http://www.arrl.org/FandES/field/regulations/news/0103WASHBOX.pdf

now, how about more details on your "net"??? real names of net controls?? 'local government entities' that check in?? if you are so sure of yourself lets name some names!

Oh? Does S25.5 say "except for domestic use only" ?

Because Japan is in violation of S25.5 and no one has made a stink
about it doesn't make it OK for the US to do it.

You are starting to see where problems about amateur radio rank in
today's REAL international communications regulation scheme, where
money talks and big money talks loudest.

We are lucky to get to keep what we have.

Oh! You reached so far for that snappy comeback that you
must have hurt yourself!

Have you been in some far galaxy the last half decade or so?
Have you overlooked the many documents at the FCC site
on WRC, spectrum realignment, release of government radio
bands to civil radio use (also at NTIA website), and freeing of
the former top TV channel spaces? Strange that you didn't
notice any of that. Many, many others did.

David Ho's article was little more than "filler" material, going
over what has already happened, had no real substance or
anything new other than mentioning the present administration.

>> >Seems to me there are two threats to amateur radio here:

The NTIA has said words of the same general meaning for years.
So has the Pentagon. Both for years.

>"unlock the economic value and entrepreneurial potential" can mean
>anything from some minor rules changes to wholesale reallocation.
>"U.S. spectrum assets" doesn't exclude the ham bands.

Neither does it exclude CB, mass media radio, Part 95 R/C,
PLMRS, public safety radio services, etc., etc., etc.

One of the Big topics under rules formation right now is UWB.
There's over 250 MHz of UHF bandspace been released and
now under discussion for domestic US radio use, none of it
involving precious ham bands.

>The threats are there, for anyone unbiased and realistic enough to see
>it.

Just as listening to RF noise too long will make you think there's
CW in there somewhere...the imagining of black helicopters of
paranoid imagination will bring them forth en masse to terrify you!

Spectrum planning and utilization has been the subject of joint
FCC and NTIA surveys for over a dozen years. That has included
the precious HF ham bands (your only "involvement"). You've
refused to acknowledge those mentioned before, now you are
running scared, terrified of the unknown. Why?

Says Jimmie: "Well, just because nothing is mentioned, there's
a great danger out there from loss of ham bands!" Okay, what
is in all that danger? Since 1979 US amateurs have GAINED
bandspace, not lost it, will gain a bit more on 3 July.

>But then again, you're not involved, Len.

Sorry, Jimmie, I AM involved in UHF and above. Pity that you
aren't involved. Enjoy old-fashioned working DX on HF with CW.
:-)

I doubt it and I'd be very surprised if the FCC allowed Techs to use
any of the 60M freqs, Alaska, here and otherwise. I expect that all
the usual Part 97 rules apply to all freqs below 30 mHz or we would
have heard about any exceptions by now.

Part 97 clearly states that domestic nocodes cannot operate below the
bottom edge of 6M. Period. Have you seen any exceptions to this rule
published?

Kindly notes that what Japanese hams can do in Japan means squat to
the FCC.

But according to others, Japan argues that they are not in violation.
Apparent the FCC must have agreed or they simple did not care enough
to complain.

But that is not the point of my question. Since 5mhz is not amateur band,
the FCC could have create a new 5mhz emergency service license. New
written exam, no use of amateur frequencies, and no S25.5 violation.

All the FCC did was to expand a non-conforming use (5 USC 706)
by extending the Morse code requirement to a non-amateur band,
SSB mode only, no CW mode, and domestic use. (unnecessary)

> You are starting to see where problems about amateur radio rank in

But likely it would depend on the status of the frequency. These
new 5MHz channels are now allocated to amateur radio in the US,
where any type of hobby use is permitted.

From the vague details I've seen, I gather the Alaska channel is
for emergency use only. Is it an "amateur channel", or a channel
for emergency that also allows someone licensed in another service
to use their existing radios to help in emergencies?

CAP and MARS could be considered a similar situation. They aren't
amateur frequencies (well, not the out of ham band ones), and while
a requirement is a ham license, it isn't really hobby operation and
there are restrictions place on the use of those frequencies.

The treaty about a CW test for hams is specific to amateur radio.
Any other service, there is no such requirement (and beyond international
treaties, there is ample room for each country to decide how to use
radio). So for these non-amateur and non-hobby frequencies, I don't see why
the treaty applies.

Of course, those auxiliary services may want a certain level of
skill, that incorrectly or correctly they judge based on the license
level, and that may keep some hams from participating.

The latter. The Part 97 Rule covering that state "Any station...."
and stations in Parts 80 (Maritime), 87 (Aviation), and 90 (Land
Mobile) have similar paragraphs authorizing such use.

CBers are not so authorized.......

However, I think the FCC could have allowed all hams, including
novice and techs, to use the 5 channels without disturbing or
violating the int'l treay.

> prevented.

In the 5 MHz case, the FCC has already taken into account the
possible interference to non-amateurs.

> 4) 4th class Japanese hams are only allowed to use very low power on HF
(10
> watts PEP, as I recall), and Japan is an island nation, so harmful
interference
> to amateurs of other countries is avoided.

So how does the US and Canada mitigate interference between non-hams
on various non-ham bands/frequencies?

> Thus, Japan says it is not in violation of the treaty, because its
measures re

With but minor modification, the same arguments could fit the
5 MHz channels...IF the FCC were to be so inclined.

Nobody is telling you to shut up, Len. Even though you have told others to do so.

We're simply pointing out that except for your newsgroup postings, and perhaps your lengthy and anti-child reply comments to the FCC three years ago, you're not involved in amateur radio at all.

Even though there's been an amateur radio license with no code test available in the USA for more than 13 years, you haven't bothered to get one.

Even though the code test requirement was reduced to 5 wpm more than 3 years ago, you haven't bothered to obtain any class of amateur radio license.

Even though you told us almost 3-1/2 years ago you were going for Extra right out of the box, you haven't even attempted any amateur radio license exams. (btw, in the context of the 2000 restructuring, 'right out of the box' obviously meant as soon as the rules changed back on April 15, 2000.)

You're just not involved in any meaningful way, Len. You can rant and rave here all you want, but why should anyone take you seriously?

I sure don't.

And what are these "message points", anyway? Can they be traded for valuable prizes?

Yes, Len. Your logic that there are no threats to amateur radio because amateur radio isn't specifically mentioned is faulty. Mistaken. In error. Falt out wrong.

>>From W hisself:
>>
>>"We must unlock the economic value and entrepreneurial potential of U.S.

So? This is not a cb newsgroup, not a mass media radio newsgroup, nor a Part 95 newsgroup, nor a public radio services newsgroup. It's an amateur radio newsgroup, dealing with amateur radio.

But you're not involved in amateur radio, Len, other than your numerous lengthy and generally pointless posts to amateur radio newsgroups..

That's true.
>
> The FCC could have allocated use of the five 60m frequencies
> to all US amateur classes without upsetting anything in S25 as
> it is written now.

No, that's not true.

The treaty, as FCC interporets it, requires a code test for any license that allows the licensee to operate an amateur radio station on any allocated frequency below 30 MHz. Since 5 MHz is below 30 MHz, the tests for a license that allows the licensee to operate an amateur radio station on those 5 channels must include a code test.

That is, until the treaty changes, or the FCC decides to violate the treaty.

> There are no ITU-R recommendations specifically
> forbidding amateur "classes" anything. There are NO ITU-R
> statements concerning "classes" of amateur licenses.

You're just repeating your mistake, Len. 5 MHz < 30 MHz.
>
> License regulations and allocation of use are disparate subjects.

Not in this case.

But why does it matter to you, Len? You're not involved.

Michael Black wrote:

>The treaty about a CW test for hams is specific to amateur radio.

And the new 5mhz allocations are for amateur radio licensees to use. In short, in the US they are amateur
radio allocations on a secondary basis. Hams must yield to the primary users of the allocations. Trying to
make the code requirement disappear on this basis won't fly.

> Any other service, there is no such requirement (and beyond international
> treaties, there is ample room for each country to decide how to use
> radio). So for these non-amateur and non-hobby frequencies, I don't see why
> the treaty applies.

In simple terms, because it applies to amateur radio operators and this allocation is, again, an amateur
radio allocaton. Nothing says that it has to be a worldwide allocation for international treaties to apply,
except those who are creatively trying to avoid reality.

I'll excuse your gaffe. I didn't attempt masquerading as anyone. My
post was signed with my name and call. Perhaps you're disoriented.

> The FCC is NOT INVOLVED in operating amateur radios. They
> just regulate it along with every other US civil radio service.

Yes, you are disoriented. You aren't working for the FCC and you have
nothing whatever to do with amateur radio.

> The demand to BE INVOLVED or shut up is a bogus one, just
> another excuse to attempt winning message points. The BE
> INVOLVED argument, if a requirement for determining new
> amateur radio regulations, would itself be unconstitutional as it
> applied to free speech guarantees under the constitution.

I've not told you to shut up, Len. I make light of you. Like Carl Stevenson, you are your own worst enemy. You've commented to the FCC. The FCC is obligated to accept your comments. I'm not so obligated. The FCC recognizes that you are not involved in amateur radio and so do I. The only message points I recognize are for amateur radio traffic handling. You can't mean those since you aren't a radio amateur.

> The BE INVOLVED criterion is bogus self-righteousness that
> pretends that only those already licensed be allowed to discuss
> anything concerning getting into US amateur radio.

You aren't getting into amateur radio. You've made not one feeble attempt in all the years you've posted here. You've only gotten to the discussing part.

> Your amateur radio license does not convey any special
> conditions that only you or any other already-licensed citizen
> are the only ones permitted to discuss getting into amateur
> radio.

You aren't getting into amateur radio, Len. You've declared a decades-long interest in amateur radio but that interest never extended to actually making an attempt at obtaining a license. You've posted here for seven or so years without so much as getting even a code-free ticket. Your talk of "Extra right out of the box" was more vapor.

> You do NOT run the FCC, do not have any censorship powers
> on who may discuss what in regards to federal regulations.

You're right on all counts. Then again, I was quite aware of those realities. Here's some reality for you: You haven't anything to do with amateur radio.

> >> The only "validity" is that the already-licensed extras had to

> licensed a long time gives you some special rights over and
> above others.

That's not correct though radio amateurs do possess special rights over and above others. They are authorized to operate radio stations under Part 97 of the FCC regs as they choose. The only people who may do so are those who pass an amateur radio license exam. You've not done so.

> Few long-time radio amateurs will admit such an opinion openly,
> yet so many insist that all newcomers meet THEIR criteria in
> what a "ham" should be. THAT is your continuing self-

> righteous opinion.

Under current regs, it is simply impossible for newcomers to do what I
did to obtain a license. The criteria are not mine, they are those of
the FCC. One must meet the qualifications a specific class of amateur
radio license. There is no other way in. If you want it, you'll do it.
Otherwise, you're simply irrelevant to amateur radio.

> >> That's just emotional self-righteousness of a very personal
> >> kind, not at all applicable to the US agency that grants such
> >> amateur licenses.
> >
> >How do you deal with the your appearance of emotional self-righteousness

> that it should be abolished. It would seem that such an opinion
> grates mightily on your own self-righteous opinion that all should
> do the same as you did because you had to do it. That's not a
> valid reason for retention of antiquated regulations.

Others are simply stating an opinion on the morse code test necessity
which differs with yours. You label their views "self-righteous
opinions". Yet others differ with your view on a minimum age for
licensing. You label their views as "self-righteous opinions".
You continue to bring up this straw man of someone doing something
because I had to do it. No one must do as I did under current licensing
regs because the tests are not the same. There is no more 13 wpm morse
test. There is no more 20 wpm more test. Your statements are simply
wrong.

> The bogusness of the BE INVOLVED criterion shines above. You
> took a morse code test long ago and passed. You are unlikely
> to ever have to surrender your amateur radio license grant and the

> regulations.

There's that old false claim again. None who take a test today can do
as I did. Why are you worried about it? You aren't part of amateur
radio. You haven't even tried to be part of amateur radio. You're
simply a guy with an amateur radio newsgroup fetish.

> You are NOT with the FCC, you have NO power to override the
> Constitution of the USA despite your license. It's fairly obvious
> to everyone else that all you are doing is simple dictatorial
> controlling - by whatever method, unethical, immoral or
> otherwise - in short, to be some kind of self-proclaimed Boss.

Darn, Len. You are NOT with the FCC and you have NO power to override the Constitution. You have nothing to do with amateur radio in any way yet you post to an amateur radio newsgroup in an effort to convince us that you have the answers for amateur radio. You know best what the licensing criteria for radio amateurs should be. On what would this knowledge of yours be based? After all, you aren't involved in any way with amateur radio. What are you--some kind of geezer with a control obsession?

Go back and reread what I said, and especially the bit I was responding to.
Someone wondered if the no-code technicians were allowed to use the
Alaska emergency frequency. Someone else said likely not.

I was trying to point out that the Alaska frequency, like CAP and MARS,
is actually another service, so code requirements would not apply.

>
Those frequencies aren't just empty bandwidth. They are allocated to
various services.
Forest ranger comms and such. You might not hear them (they use low
power) but
they certainly hear freebanders screwing up their channels. Also
there's some military
channels in there as well. Can you say "homeland security"? Oh, they
don't do any
classified comms there, but they still do lots of routine unclassified
stuff.

What can you do in the "freeband" that you can't do legally on ten
meters as a properly
licensed ham? And if you get the ham license you can use other bands
like 20 or
40 or 80m when the sunspots are down. Oh, you need to pass a morse code
test,
but that's at 5 words per minute nowadays. It ain't that hard, I did it
and I'm not that
good at brain reflex tasks.

As for being under the government's thumb, the FCC doesn't really bug
most hams
at all. Only if you make a habit of doing annoying illegal things do
they do anything.
Rules about "no business traffic" are really to protect our frequencies
from getting
hijacked by companies looking for comm channels.

>We are good operators and have knowledge of propagation and skip conditions.
>
You'd then know that the "freeband" goes dead between sunspot cycles.
Other HF ham bands
have decent propagation between cycles.

>We use Yasus, Kenwoods and Icomm radios just like you do, so we know technical
>issues as well or better. However, the attitude of some hams toward us is
>rude and condescending. We are treated like 2nd class citizens. This should
>not be. We have the same rights under the constitution as legal hams do.

>
>
You have the same rights to take the ham radio tests as hams have had.
So study up and
take the damn tests and if you pass you can be legal on the ham bands.

You're still confused, Mike. If an amateur radio license of General class or higher is required for *hams* to
access that frequency, a code requirement currently does apply, within the USA. YMMV in Canada.

Dick

One of those new "channels" is the same as one in the UK, and so far as
I know, the FCC
didn't say that we were not allowed to have QSOs with the UK hams there.
Thus I'd think
it would fall under the treaty rules for coded hams only.

>
>The FCC already is allowing citizens without licenses to operate below 30
>mhz on
>40 channels using upper and lower side band, and AM modes.
>
The CBers are not supposed to talk to anyone in other countries. Thus
it is an "internal"
service. And it's not ham radio. The treaty talks about code for
hams below 30MHz.

>
>In other word, is the code requirement a band requirement or licensee
>requirement?
>Why would a person need CW proficiency to use a band the bars the use of CW?
>
>
There's a rule that mentions "generally accepted ham practices" and that
it is bad ham procedure
to operate modes outside the generally accepted band plans. Which means
don't use CW in the
middle of SSB country. Also don't use LSB on 20m. Or go simplex in 2m
on a frequency that
happens to be the input frequency of the local repeater. This would
effectively "bar" the use of
CW on certain portions of HF ham bands. But you need to be coded to get
on the HF bands.

Sorry, Jimmie, the Colonel and the Bwahahaha have both told me
to "shut up." The Colonel called me a "horse's ass" in public and
Bwahahaha has called me several kinds of nasty names. You can
find all that in Google. :-)

>We're simply pointing out that except for your newsgroup postings, and perhaps
>your lengthy and anti-child reply comments to the FCC three years ago, you're
>not involved in amateur radio at all.

You have NO real idea of my "involvement." :-)

Further, you cannot control my involvement, cannot control what
I am involved in. All you do is erect fragile strawbeings and
demand obediance to your wishes.

>Even though there's been an amateur radio license with no code test available
>in the USA for more than 13 years, you haven't bothered to get one.

Why is that necessary? It would make no difference to you
in any event...you would still claim "superiority" from having
taken and passed a morse code test. :-)

I was legally communicating on HF a half century ago and
passed a commercial test (first class) 47 years ago.

I don't need any "licenses" to discuss any federal regulations.
The First Amendment of the US Constitution grants me that
right. I defended that Constitution as a US military member
for 8 years, remember? You've never served in the US military,
remember?

>Even though the code test requirement was reduced to 5 wpm more than 3 years
>ago, you haven't bothered to obtain any class of amateur radio license.

Why is that necessary? It would make no difference to you
in any event...you would still claim "superiority" from having

taken and passed a high-rate morse code test. :-)

I was legally communicating on HF a half century ago and
passed a commercial test (first class) 47 years ago.

I don't need any "licenses" to discuss any federal regulations.
The First Amendment of the US Constitution grants me that
right. I defended that Constitution as a US military member
for 8 years, remember? You've never served in the US military,
remember?

>Even though you told us almost 3-1/2 years ago you were going for Extra right
>out of the box, you haven't even attempted any amateur radio license exams.

Tsk, tsk, tsk, I never said WHEN I would. :-)

You have NO real idea of anything "I attempted." Nada. Zip.

>(btw, in the context of the 2000 restructuring, 'right out of the box'
>obviously meant as soon as the rules changed back on April 15, 2000.)

No, Jimmie, you can't redefine older colloquialisms. "Out of the
box" refers to taking all test elements at once, just one test
session instead of coming up through all the classes like good
little boys and girls of US amateur radio do.

>You're just not involved in any meaningful way, Len. You can rant and rave
here
>all you want, but why should anyone take you seriously?

Why are you so concerned, then? Are you in pre-med, studying
for a psychiatric specialty or trying for a psychology PhD? :-)

>I sure don't.

Sure you do. You can't help but make all kinds of nastygrams
against those who don't believe in your self-righteous opinions.

>And what are these "message points", anyway? Can they be traded for valuable
>prizes?

For your own EGO, Jimmie. :-)

The agendas for amateur radio at WRC-03 are numbered 1.7.1, 1.7.2, 1.7.3. You can find the US administration positions on those at the FCC website, www.fcc.gov. Click on International Bureau, then click on World Radio Conference on the IB page. From there you can select from a large number of administration documents. There are even links to CITEL and the IARU web pages.

>
>The treaty, as FCC interporets it, requires a code test for any license that
>allows the licensee to operate an amateur radio station on any allocated
>frequency below 30 MHz.

Oh? The FCC sat down with you to "interporets" it? :-)

Did the FCC interpret the ITU-R amateur regulations...or didn't
it just make regulations which US citizens must obey directly?

Is the FCC supposed to make all its interpretations known to
the public? Last I knew, the FCC simply made civil radio
regulations. The FCC is not a supreme court of radio, just a
regulator.

You are attempting to split hairs or perhaps have hair of the dog.
ITU-R regulation S25.5 calls for a code test given by any
administration for an amateur radio license having below-30-MHz
privileges. Further, S25.5 clearly states that code test as having
BOTH sending and receiving tests. The US administration quit
requiring the code sending test years ago...thereby putting itself
in violation of that precious treaty.

>Since 5 MHz is below 30 MHz, the tests for a license
>that allows the licensee to operate an amateur radio station on those 5
>channels must include a code test.

You haven't made the connection between ITU-R regulations
yet. There are NO ITU-R amateur regulations that absolutely

require any test proficiency on any amateur band anywhere in
the spectrum. That's up to the individual national administration.
In the case of the USA, the FCC is the regulating body for the US
administration. The FCC specified which class of licensee can
operate in the amateur-as-secondary 5 frequencies.

ITU-R regulations AND recommendations are very silent on
classes of amateur radio licenses. In fact, they don't make any
distinction at all in class, grade, proficiency...that is determined
by individual national administrations.

FCC 03-105 specified the ONLY mode on the 5 frequencies as
voice. No on-off keying morse code modes at all.

>That is, until the treaty changes, or the FCC decides to violate the treaty.

The FCC long since "violated the treaty" on the optional
elimination of the morse code sending test for a license exam.
:-)

So, expert on geopolitics, economics, and choo-choo trains,
what will happen if the FCC "violates a treaty" on amateur radio?
Will there be WAR? Will the International Radio Police invade
Washington and occupy the FCC building? Will there be "angry
letters of protest" filed with the United Nations? Will the UN
Security Council hold a special session to debate that thorny
problem? :-)

>> There are no ITU-R recommendations specifically
>> forbidding amateur "classes" anything. There are NO ITU-R
>> statements concerning "classes" of amateur licenses.
>
>You're just repeating your mistake, Len. 5 MHz < 30 MHz.

No mistake, Jimmie. There are NO ITU-R regulations or
recommendations on any administration's license classes,
grades, or other distinctions. You can't find them because
they aren't there.

All you can do is make a vague inference between S25.5's
requirement for a code test for any administration's amateur
license having privileges of operation below 30 MHz.

>> License regulations and allocation of use are disparate subjects.
>
>Not in this case.

Sorry, but they are separate. You've had it explained to you but
you still don't understand what any part of S25 says now.

>But why does it matter to you, Len? You're not involved.

Jimmie, you are NOT involved in US amateur radio above the
2m band, are you? That's where the overwhelming EM

spectrum bandspace exists for US radio amateurs.

You are NOT involved in US national politics, so why do you
mention US political parties and at least three US Presidents?
That has nothing to do with amateur radio.

Unless there has been some secret laws passed recently,
there is nothing at all preventing any US citizen from discussing
anything about US federal law. You seem to be one of those
dictatorial types who want to bar US citizens from talking about
US amateur radio law unless they have an amateur radio license.
Why do you insist on violating the First Amendment of our
Constitution?

>
>Yes, Len. Your logic that there are no threats to amateur radio because
amateur
>radio isn't specifically mentioned is faulty. Mistaken. In error. Falt out
wrong.

Neither flat out wrong nor "falt out wrong," Jimmie. :-)

The Ho article didn't mention US amateur radio or any amateur
radio. Why do you insist there is some sinister intent in the
words not written? :-)

>>>From W hisself:
>>>
>>>"We must unlock the economic value and entrepreneurial potential of U.S.
>>>spectrum assets while ensuring that sufficient spectrum is available to
>>>support critical government functions."
>>
>> The NTIA has said words of the same general meaning for years.
>> So has the Pentagon. Both for years.
>
>So? This time it's the president himself. Who faces reelection in a little
over
>16 months, while the economy is stalled.

Why the expansion to national politics? Does your amateur license
now give you great powers in politics and economics? :-)

That the government agencies were all vying for their pieces
of the EM spectrum pie were known two administrations ago.
None of that is new.

Don't you remember the EM spectrum surveys mentioned in here?
I'll bet you didn't look them up or find out what they said. :-)

The Ho article came out on the eve of WRC-03 now in progress
in Geneva. WRC-03 has already started, the US administration
has all their ducks in a row and even has a special ambassador
to the WRC. You could have found all that out on the FCC web
site before Ho wrote that article.

>A president whose father's success in Gulf War 1 was overshadowed by a stalled
>economy, resulting in eight years of Mr. Clinton in the White House

Sounds like you aren't in favor of either party or any President.

Can you do better? :-)

>>>"unlock the economic value and entrepreneurial potential" can mean
>>>anything from some minor rules changes to wholesale reallocation.
>>>"U.S. spectrum assets" doesn't exclude the ham bands.
>>
>> Neither does it exclude CB, mass media radio, Part 95 R/C,

>newsgroup, dealing with amateur radio.

No kidding? Gosh, old-timer, from the Cries of Alarum and fingers
pointing to unseen black helicopters, I thought the thread was
about UFOs...Unseen Falt Out remarks. :-)

Amateur radio is NOT about American Presidents, choo-choo
trains, or a couple dozen other assorted items definitely not in
the amateur arena. Google will demonstrate that if you don't
have your AOL message settings at maximum. :-)

>But you're not involved in amateur radio, Len, other than your numerous
lengthy
>and generally pointless posts to amateur radio newsgroups..

Awww...you go back to talking about your amateur radio
choo-choo trains or national politics, then. Sorry I disturbed you.

:-)

>> One of the Big topics under rules formation right now is UWB.
>> There's over 250 MHz of UHF bandspace been released and
>> now under discussion for domestic US radio use, none of it
>> involving precious ham bands.

>portion of crow?

Colonel, you could copy over the entirety of Google's archive on
this newsgroup. That would serve no purpose other than making
you happy to put down another person you don't like...and you DO
like to put down certain people any which way you can...which
includes name-calling to the level of using "horse's ass."

You feel your amateur extra gives you some kind of "right" to do or
say anything you want, to act a "superior" any time you need your
ego boosted. That's been demonstrated time and again by yourself
in here.

You really ought to think hard about running for office, like being
executive president of ARRL for life. That would make you VERY
important. You could lord it over everyone once a month in QST
editorial pages and tell everyone how You KNOW How Hams
Should Be. No problem. :-)

Now go back to Living In The Past in Google. Be as vindictive as
you want to be...you are certainly "superior" in that regard.

It's not going to make a lot of other hams love you, Colonel. That
IS what you are after, isn't it? :-)

Tsk, tsk, tsk.

> to "shut up."

Who are "the Colonel" and "the Bwahahaha"? I don't recall anyone identifying themselves that way here.

Where did anyone in this newsgroup tell you to shut up? Show us the postings where that happened.

Disagreeing with your faulty logic and pointing out your mistakes is not the same as telling you to shut up. Exposing your biased opinions and pointing out you non-involvement in amateur radio is not the same as telling you to shut up.

> The Colonel called me a "horse's ass" in public

Did he say you WERE a horse's ass, or that you behave like a horse's ass?

In what way is such a description inaccurate?

Show us the postings where all this allegedly happened.

> and
> Bwahahaha has called me several kinds of nasty names.

Really? And you never called anyone a nasty name first, huh? You've been a paragon of civil behavior here, right?

Perhaps we should make lists of all the names you've called various posters here, Len.

Let's see, I recall you calling me "Jimmie", "boy", "pedantic parson", and "minus j", just for starters.

>Which would apply in the "low power" 5 MHz channels if the FCC wanted to.

Perhaps - but it's clear the FCC doesn't want to. FCC hasn't adopted Japan's
rationalizations for any other amateur band or license, so why should they do
so for 5 MHz?

>> 2) In regards to Japanese amateur radio, two kinds of harmful interference
>> need to be dealt with: interference to non-amateur radio services of all
>> countries, and interference to non-Japanese radio amateurs.
>
>Would be the same for the 5 MHz channels also.

Not really. The USA isn't an island nation. The 5 5 MHz channels are not
worldwide exclusive amateur.
>
>> 3) 4th class Japanese hams' HF privileges are only on frequencies that are
>> worldwide exclusive amateur, so interference to nonamateur sevices is
>> prevented.
>
>In the 5 MHz case, the FCC has already taken into account the

>possible interference to non-amateurs.

That's the rationale for channelization, USB only and the power limit. Note that we do not know how well that scheme will actually work.

>> 4) 4th class Japanese hams are only allowed to use very low power on HF
>> (10 watts PEP, as I recall), and Japan is an island nation, so harmful
>> interference to amateurs of other countries is avoided.
>
>So how does the US and Canada mitigate interference between non-hams
>on various non-ham bands/frequencies?

All sorts of ways that don't apply to amateur radio.
>
>> Thus, Japan says it is not in violation of the treaty, because its
>> measures re 4th class licenses meet the goals of the treaty. You may not
>> agree with Japan's
>> reasoning, but to my knowledge no other country has challenged Japan on it
>> in at least the past 35 years.
>
>With but minor modification, the same arguments could fit the
>5 MHz channels...

I don't think so, Bill. The 5 MHz situation is different in at least three ways (more power, not exclusive amateur, USA not an island). There's also the issue of the written test.

Note that FCC did not authorize Novices or code-tested Techs to operate on the new channels, even though those hams have some HF 'phone privileges and a power level well above that allowed on 5 MHz.

>IF the FCC were to be so inclined.

And that's the real kicker. FCC is in the middle on this one. They were unanimous in approving the ARRL proposal for a new 150 kHz wide "traditional" ham band open to lots of modes and higher power. Then, AFTER comments had closed, NTIA sent a letter opposing the whole idea. What was FCC to do? The answer is the R&O.

Also, even if/when S25.5 goes away and FCC drops Element 1, there will still be the matter of a written test.

Sorry, Robert, or what ever your name is (since you didn't sign the post with a name, callsign, etc), but the FACTS are that the Federal Communications Commission, a panel of politically appointed civilians, makes/enforces the radio regulations by which we all must adhere.

That there are opinions that do not reflect that is obvious. Your quotes from Google are valid OPINIONS, no doubt, but carry no force of law.

>Well, enough of that.

Yep...enough of that. Unless you can show me a point of law which refutes it.

> taken and passed a morse code test. :-)

You've long disliked that there are others who have more experience in
something than you. In any endeavor, there are going to be people with
more experience than you, Leonard, old bean. In amateur radio, there
are a number of children with more experience than you. :-)

> I was legally communicating on HF a half century ago and
> passed a commercial test (first class) 47 years ago.

You weren't communicating on HF as a radio amateur and your commercial
test is irrelevant to amateur radio. If you want to be a radio amateur,

you'll have to start at the beginning.

> I don't need any "licenses" to discuss any federal regulations.

No, you don't. You need a license to be a part of amateur radio.
You aren't a part of amateur radio.

> The First Amendment of the US Constitution grants me that
> right. I defended that Constitution as a US military member
> for 8 years, remember? You've never served in the US military,

That's my name and I've been using this e-mail for years. As to my
callsign, I'm not going to get into a debate about the wisdom of putting
one's name and address all over the 'net.

but the FACTS are that the Federal Communications
> Commission, a panel of politically appointed civilians, makes/enforces the
> radio regulations by which we all must adhere.

Yes, but that's not the point, is it? If the opinions of members of
the ARS and/or the public at large were irrelevant, there wouldn't be a time
period during which one submits those opinions on regulatory matters.

> That there are opinions that do not reflect that is obvious. Your
quotes
> from Google are valid OPINIONS, no doubt, but carry no force of law.

I seriously doubt the logic of a lot of 'em.

> includes name-calling to the level of using "horse's ass."

Sure it would serve a purpose, *Foghorn. It would show that your
conveniently snipped statement is a false one. That means that you
simply aren't telling the truth.

You were called a **horse's ass because being a horse's ass is your
demonstrated pattern of behavior here. You don't play well with others.

> You feel your amateur extra gives you some kind of "right" to do or
> say anything you want, to act a "superior" any time you need your
> ego boosted. That's been demonstrated time and again by yourself
> in here.

Incorrect, Leonard. The same Constitution you often quote gives me the
right to state my views here. Further, since I am involved and have
been actively involved in amateur radio for forty years, my views
reflect experience. That, if nothing else, sets them apart from yours.

> You really ought to think hard about running for office, like being
> executive president of ARRL for life. That would make you VERY
> important. You could lord it over everyone once a month in QST
> editorial pages and tell everyone how You KNOW How Hams
> Should Be. No problem. :-)

See how little you know? League presidents don't even have regular QST
space. They don't attempt to "lord it over" anyone. What is any of
that to you? You aren't a ham and you aren't a League member.

> Now go back to Living In The Past in Google. Be as vindictive as
> you want to be...you are certainly "superior" in that regard.

Ahh! I think I see the source of your confusion. Google isn't some sort
of time warp. It is only an archive in which can be found almost all of
your posts to this newsgroup. Do you view seeing your current claims

compared to your previous statements as vindictive, Len? The words I'd quote would be accurate accounts of things you've actually stated here. Are you ashamed of them? Why else would you consider seeing them again as "vindictive"?

> It's not going to make a lot of other hams love you, Colonel. That
> IS what you are after, isn't it? :-)

Love me? What a peculiar thing to think, Foghorn*

*Foghorn: One of the nicknames Len receives when he resorts to names like "The Colonel" or "Jimmie". Foghorn Lenhorn is based on the loud know-it-all cartoon rooster from the Warner Brothers cartoons.

**Horse's Ass: The end of the horse farthest removed from the head. It is the portion producing road apples.

Dave K8MN

But, Foghorn, just a few lines ago you commented that Jim isn't involved in "UHF and above" frequencies. Your latest statement is certainly reciprocal. It would mean that you have NO idea of his involvement in "UHF and above" frequencies. It would mean that you have NO need to know and NO authority to know. One thing is for certain: Whatever your involvement, it certainly isn't happening under Part 97. You have nothing to do with that.

> Go to bed, Colonel. Be sure to take off your jackboots first.

> than are available to any US amateur.

I didn't see anything indicating that you have any experience in amateur
radio whatever during your half century. You don't sound like a very
good judge of what's best for amateur radio.

> >After all, you aren't involved in any way with amateur radio.
>
> Still using that schtick, ey Colonel? :-)

It is still as true today as ever, Foghorn.

> >What are you--some kind of geezer with a control obsession?
>
> No, you are. You need someone to Hit on to satisfy your
> curious personality...especially since long ago when you were
> criticized for poor procedure in US government radio
> communications.

These words seem to be a contradiction to your denial of a control obsession. You weren't any more involved in my government communications job than you are in amateur radio. It hasn't stopped you from trying to be an expert in either area. You're irrelevant to either subject; not involved; an onlooker.

> You just can't take negative criticsm, Colonel.

I needn't take it from someone who hasn't the qualifications for it, O Prince of Pontification, Guru of Gigaherz, Maharishi of Modulation.

> Now go to bed...and don't forget to remove your jackboots first.

See? An obsession with control...and nazi paraphenalia.

There's a major difference. The NRA does NOT demand that freedom of speech, etc., be abridged nor any other constitutional right be denied anyone; but ACLU *does* demand the the right to keep and bear arms be infringed.

Quick history of hams on 11:

US hams got access to a band at 11 meters after WW2. It was shared with "ISM" (industrial-scientific-medical) users, which meant there were sometimes some really odd noises on the band. It was popular with some hams because it was less crowded than 10 meters, and was another "Class B" phone band. The actual band edges changed a few times in its history as a ham allocation. It was never as popular as 10 meters, though.

In the late 1950s it was reallocated to the new "Class D" citizens radio service, despite opposition from hams. FCC could do this because 11 was never a ham band by treaty agreement. FCC's counter argument to the loss of 11 was that since hams had gotten 15 meters worldwide exclusive amateur in 1954 as a result of the 1947 Atlantic City conference, 11 wasn't needed as much by hams.

> And long before that look what happened when hams had it all above 200
> meters.

Actually hams never really had it all above 200 meters in the USA. Instead, after 1912, amateurs were limited to wavelengths not greater than 200 meters. Those pioneering hams who opened the short-waves in 1923 had to get special station licenses to operate on the shorter wavelengths. All it took was a specific request. The first transatlantic QSO took place on about 110 meters, but the participants could have requested almost any wavelength shorter than 200.

Shortly after pioneering amateurs proved the usefulness of short-waves 80 years ago, others rushed to use them, and amateurs were herded into specific bands of frequencies.

> The pattern is clear. The ham bands are a sort of FCC "land bank".

Check out what the 1927 conference did to the amateur allocations.
It's not pretty.
>
> We'll deal with it. As usual.
>
Yup. The question to think about is "why aren't the bands used more?"

You're looking at part of the answer.

What bothers me is that lying to suspects and altering evidence is standard police behavior. Neither police nor courts consider it wrong, let alone illegal, to offer a suspect a plea bargain then tell him/her that they have witnesses that don't exist, that he failed a lie detector test he actually passed, or even show him doctored pictures to convince him to plead guilty, whether he is or not; never mind the real perp escapes. But if you lie it's obstruction of justice.

Abolition of s25.5 was supposed to have been on the WARC agenda in 1992.
That conference was posponed to 1995, and then the item was taken off the
agenda. It would have passed in 1992, so that's why s25.5 is on borrowed
time.

What makes that a problem, Leonard? Amateur radio is open to all races
and any of the several sexes. Hams tend to concentrate on their common
ground, not upon what makes them different from each other. But you
wouldn't know about that. You aren't involved.

> Such hams will have great fun putting down
> anyone not of Anglo-Saxon ancestry or "western" ethnics.

Build your own premise and you're sure to come up with your own
conclusion. Vipul isn't running into problems because of his ethnicity.
His difficulties come from faulty thinking.

> No "western" given name? Oh, wow, great opportunity for calling
> such all sorts of depreciatory names, making fun of them for not
> fitting in with "being American." That's getting more typical every
> day in US amateur radio.

I don't know if that's the case in amateur radio. I have acquaintances
the world over with non-western given names and surnames. They don't
get called depreciatory names. None of them are made fun of. Then
again, none of them attempt to argue things such as "amateur radio" and
"ham radio" being two separate things.

Things outside of amateur radio might be different. Let's take your situation as an example. While I've never observed you calling non-westerners depreciatory names, I've see you do quite a number of things with names like "Steve", "Jim", "Dave", "Larry", "Dick" and "Brian" among others. That must be a special reverse of the circumstance you described--maybe because you feel that YOU don't fit in or because you don't feel that we're sitting quietly at our desks, respecting you.

Nobody knows if it would have passed in 1992. Remember that back then the
maritime services were still using Morse code on both HF and MF.

The postponements improved the chances that S25.5 would be totally eliminated
rather than modified or rewritten.

WRC 2003 opened on Monday.

>Do the smiley faces cover your embarrassment over not having walked the
>walk after talking the talk?

Leonard, the Rear Area Radio Clerk War Hero is too cowardly and too prideful to place himself among mere mortals. He won't do it because he CAN'T do it on so many levels.

Yet Another LennieRant stated:

>> The First Amendment of the US Constitution grants me that
>> right. I defended that Constitution as a US military member
>> for 8 years, remember? You've never served in the US military,
>> remember?

I am so sick and tired of seeing crap like this from some of my fellow Veterans because patriotism and selflessness in service to America can be found at so many levels.

Patriotism and devotion to country do NOT start at Boot Camp nor manifest itself in a DD214.

This is yet another example of Lennie's two-facedness. On the one hand he scorns and scolds anyone who dares to say that HE has no place commenting about Amateur Radio despite having zero-point-zero days experience in it, yet he'll do the exact same thing to anyone who dares to express an opinion that even remotely demonstrates knowledge about the Armed Forces...

Of course Lennie also hopes no one notices the Armed Forces HE served in was over 46 years ago......Hardly "current events". His only "exposure" to current policy and procedures of the Armed Forces are the exact same websites and general media sources that any other mere mortal citizen has access to....Which means that other than offering "war stories" on Korean-era technology, he's no more knowledgeable than his mouse can make him.

Yet the snotty, "I Know Better Than You" rants go on, and he wastes his waning days trying to make a moot point in a newsgroup dedicated to an avocation he absolutely hates...

What a PUTZ.

Those of us who know better have been deluged with LennieRants asserting that Amateur Radio has no role in disaster preparedness in Southern California, and that Amateur Radio is "irrelevant" in the light of "professional" disaster relief providers therein.

Thankfully, The Ham God rolls us a bit of help once in a while in deflating yet another of Lennie's self-serving lies and demeaning rhetoric. In this case, word of yet another award bestowed on Amateur Radio volunteers who have once again proven that the trust given to us under Part 97.1 was not wasted.

From the ARRL Website:

QUOTE

California RACES team wins award for excellence: The Huntington Beach, California, Radio Amateur Civil Emergency Service (RACES) a team has received an award for excellence in disaster preparedness from the Orange County chapter of the American Red Cross. The award recognizes companies and organizations for their superior emergency preparedness plans. The Huntington Beach RACES team works under the aegis of the Huntington Beach Fire Department. An award ceremony was held June 4 during the Orange County Red Cross' 19th annual Disaster Preparedness Academy at California State University--Fullerton. The Huntington Beach RACES group's emergency preparedness plan--incorporated into the city's emergency operations plan--includes contingency plans and procedures in the event of a public safety radio system failure. Huntington Beach Fire Department Emergency Services Coordinator Glorria Morrison, KE6ATG, called the RACES team "a model emergency response Amateur Radio group with outstanding leaders and membership." Last year, she said, RACES members volunteered thousands of hours to better prepare the community for emergencies. The plan and manual were created originally by Mel Goldberg, N6MEL. RACES members train for City emergencies on a regular basis and provide support for community events such as the annual Huntington Beach Fourth of July Parade, marathons and fund-raising activities. More information about the Huntington Beach RACES organization is available on its Web site.--Wayne Yoshida, KH6WZ

UNQUOTE

I can't wait to see how Lennie spins his way past the opinions of the American Red Cross, the Huntington Beach Fire Department and the City of Huntington Beach government... ! ! ! ! !

>You're still confused, Mike. If an amateur radio license of General
>class or higher is required for *hams* to access that frequency, a
>code requirement currently does apply, within the USA. YMMV in Canada.

But the Rule (Sect 97.401(d)) says in its totality:

(d) A station in, or within 92.6 km of, Alaska may transmit
emissions J3E and R3E on the channel at 5.1675 MHz for
emergency communications. The channel must be shared with
stations licensed in the Alaska-private fixed service. The
transmitter power must not exceed 150 W.

That's the only mention of that frequency/channel in the Rules
Governing the Amateur Service. There is no mention elsewhere in
Part 97 of class of operator license authorized to do that.

If ya' REALLY want me to file a Petition for Declaratory Ruling and
get an "officia;" answer, I gotta charge by the word... <ggg>

For serious emergencies, say Bye-Bye to the Internet - it won't be
usable.

The American Red Cross and major public safety entities use internet
for day-to-day administrative traffic, but when it comes to disaster
response and recovery, they do not rely on it. Every exercise that
my public safety and hospital radio clients do assumes that all
telephone and internet comms are not available. Ditto for cell-phones
(traffic jamming if not tower damage) as was proved in the 1989 San
Francisco earthquake.

IIRC maritime CW was already on the way out - US vessels over 1600
gross tons which were making coastwise voyages in the open sea and
were therefore required by statute to have radiotelegraph stations
(and operators) were waivered by regulation if they were equipped
with all the gear that is now the requirement for the GMDSS. IIRC
the setup was even called the Future GMDSS. I may be off a year or
so on the date, but new vessels over 1600 gross tons whose keel-laid
date was after 1992 were required to have the full GMDSS setup, and
shortly after that, the waiver on the radiotelegraph installation
was extended to all US vessels over 1600 gross tons making
international voyages in the open sea if they were equipped with
GMDSS gear. The USCG stopped keeping watch on 500 kHz in the
mid-1990s.

Maritime CW is still extensively used in the open seas. I was in the Philippines last year and everyone seemed to use it. It seems that the new equipment is too expensive and the Lines either cannot afford it or they don't want to waste their money. CW works fine for them.

>I don't believe you.

Whether or not they know, they certainly don't teach the full perspective of a subject matter. Whether that is because of the educational system does not allow that, or because the teachers cannot give that perspective is another issue.

>> Few instructors of economics
>> have used their "knowledge" to advance their own finances.
>
>Really? How can we gain access to these spiffy facts? Where'd they
>come from?

How would you suggest an unbiased source find out this information? I would say that school administrators are a biased source. They would tend to endorse the end result. One example is those TV commercials claiming all they need is more funding and education will not suffer.

Even if you can find an unbiased source, it is still one's opinion on whether or not one should include non-traditional methods.

>As fascinating as all this has been, did you know that almost every
>instructor of amateur radio licensing courses is a radio amateur?

Every VE session must be hosted by a radio amateur of a higher class than what that test is for. For example, an Extra can teach the General class, but a Technician cannot teach the General class.

This is unfair since a Technician may have been an EE that just not wanted to learn code. So, the Extra, that just memorized the questions and answers and knows less than the EE, teaches the class.

>Why should a high school or university offer a course in handling traveler's
>checks? Anyone that is dumb enough to need such a course is too dumb to
>learn the material anyway.

Traveler's checks is just one of the topics in a Banking course. CDs and credit cards could be other topics. Some people do not have this knowledge, and they are not dumb, but they had not experienced that before. They should offer such a course for people than need such information. Others may be able to test out of the course. This allows people to be more productive in society.

You don't seem to believe in the concept of the "whole person". It is possible to put these types of courses in a program and still end of with higher level "traditional" academic results also. I believe others want these types of skills also. Competition in schools would more likely result in those types of opportunities. Don't deny others that do want those skills that opportunity.

CW at sea was officially phased out beginning in 1987 and ending in 2000.
Now, if shipping lines still want to use it, there's nothing stopping
them. However, coastal stations don't have to have anyone able to read CW
or maintain any watch on any CW frequencies, not even the 500 kHz distress
frequency, and other ships don't have to have operators capable of reading
CW. I'm not sure if GMDSS is now the only distress system, or if a watch
must still be kept at quarter to and quarter past the hour on 2182 kHz
USB. Does anyone know if that is gone too?

There was a gentleman in Austin who was with some folks who had this idea last yr.

Not sure what happened however.

Seems to me.....to be "legal" a group of folks could simply transmit at the legal limit of 1/0 watt on am and have a coordinated system (maybe a website feed from each site?) to transmit several 1/10 signals spaced throughout the town and at the same AM frequency to cover the whole area!!!!!!!!.....legally!!!!!!!!!!

One would need a coordinated network of buddies to pull this off though ;-/.

peace!....."jay" ;-).

This seems good for a bet. Who wants to make a bet on where (and when) Amateur Radio (and CW) capabilities will be used?

Also, you sure are brave. You just incriminated yourself in this post. Hopefully, noone will see your post.

>But according to others, Japan argues that they are not in violation.

Sure. Doesn't mean Japan is right or that the USA must do the same thing.

Besides - would you be happy with a US version of Japan's fourth-class license?
QRP power level, access to only those band segments which are worldwide
exclusive amateur, and distinctive callsigns?

>Apparent the FCC must have agreed or they simple did not care enough
>to complain.

Not the FCC's job to deal with other countries' violations of the treaty.

Bill, your post rings with resentment and I don't understand why. I was merely adding to the discussion, my point being that, lest we forget, other countries are not as affluent as the USA and not all are rushing to dump the CW mode. That's all.

Since CW is a part of the rich tradition of Ham radio, I am somewhat perplexed as to why a fellow ham would be so ready to "attack" a somewhat positive reference to the CW mode. Care to explain?

Many items get on the agenda but never make it to the floor for a debate or vote. So just because an item is on the agenda doesn't mean anything is going to happen.

You can learn all this by working directly with your financial advisor at the bank. It doesn't take that long. Having an entire course in this stuff that you can learn in 1/2 an hour is a huge waste of time.

I definitely believe in the concept of the "whole person". Baring significant handicaps, there are many things that go into becoming a "whole person," most of which you have previously stated that you consider worthless. Such a person needs to be widely read in the great literature of the world, including Shakespeare and many others . Such a person should have learned to play a musical instrument. A "whole person" should be able to change their own flat tire. They should have the basics in physics, biology, chemistry, math, and a whole slew of topics that you consider worthless.

It is up to the person to develop themselves as a "whole person." It takes time and effort. Schools can't cover everything. It's simply impossible. All they can do is provide a few basics and point the way.

You are getting teaching mixed up with testing. Anyone can teach it but only a person of the appropriate license class can administer the tests. Teaching and giving tests are totally separate items.

> This is unfair since a Technician may have been an EE that just not wanted to
> learn code. So, the Extra, that just memorized the questions and answers and

I repeat there is no requirement on who can teach only on who can administer the tests. Admittedly it would be hard to convince people, including the students that a Tech would be qualified to teach an Extra class but there is no rule prohibiting it.

I noticed that, too. The seller prolly doesn't know just what he has.

Story... A few years ago I was visiting relatives in Fresno, Ca and asked a friend of theirs who dropped in if he happened to know of any old telegraph "bugs". He looked at me a little odd and said " I threw out a box of them a year ago when I was cleaning out the garage, thinking surely no one would ever need them again. My uncle was a railroad telegrapher. There were several of his old "'wobble keys' in that box".

AAARGGGHHHH! No telling what he tossed!
And what frosted me was that I had become acqainted with that fellow before he did that, just hadn't thought of asking him such a question earlier.

Ah, so. The old global rule about "anything goes in an emergency" applies here, I see. So all you need is a radio station capable of transmitting on the frequency ---- and an emergency! And be ready to explain why you had the radio station so long before the emergency, like the kid in San Diego who transmitted on the Sheriff's channel.

Is the above what passes for "know-code, know-ham" logic? Ever heard
of an on-off switch? The simplistic principle of binary code _ought_ to be
thoroughly burned into your brain by now, so I'd _expect_ you to be able to
deal with light switches in your home, but apparently not.
In addition, if the concept really _is_ the brain-child of a no-code
tech, how is it a brain-fart? Unless he's also an SWL'r, it's not likely to
have much effect on _his_ gear, is it? But, since it's most likely not a
suitable accoutrement for _your_ shack, _he's_ having a "typical nocode
brainfart"?
You're a great spokesman for the hobby. Typical, too.

What ever happened to Dick Bash? He was without a
doubt a gentleman and a scholar. Also the finest ham radio
operator ever to key a microphone.

73 de
Mark McLisson, M.B.A., Ph.D. P.E.
McLisson Consulting Partners

Premeditated emergency preparedness. What was once a virtue is now a
crime? You should read Orwell.

like the kid in San Diego
> who transmitted on the Sheriff's channel.

Is the San Diego Sheriff using J3E and R3E on 5.1675 MHz? Did the kid
use J3E and R3E on 5.1675 MHz? If not, then its nothing like it.

> > If ya' REALLY want me to file a Petition for Declaratory Ruling and

> Check with the guys who want to make sure they can use it codefree. :-)

It is code-free. Don't you know what J3E and R3E are?

Good grief. Yet another case of a elderly, jealous, and vindictive ham PO'd at the next generation and how unworthy they might be to share in HIS hobby. If they can't hobble a radio together out of a foil chewing gum wrapper and a double edged razor blade then the hell with 'em. Now where did I put my microphone?

For domestic use, as the ARRL requested, S25 need not apply. See: Japan.

Phil, concerning other FCC rules violations where there is "no stink"
about it, I have been lead to believe that where there is no stink,
there is no violation. Re: Farnsworth Vs Morse Codes.

FWIW the little (FCC type accepted) FT-817 ham xcvr has been able to
transmit on 5.1675 out of the box ever since it was introduced. It's
the only ham xcvr which has incorporated the ability to make use of
the provisions of Sect 97.401(d) that I know about so far. And any
dweeb can walk into any HRO and buy an FT-817.

>callsign, I'm not going to get into a debate about the wisdom of putting
>one's name and address all over the 'net.

I'm sorry then. I have a hard time taking anyone seriously who can't put thier name, call, etc behind thier posts. Most of the "regular" posters here have been doing that very same thing and have never had one second's worth of trouble, myself included. Such excuses are just that...excuses for not standing up 100% behind one's opinions.

> but the FACTS are that the Federal Communications
>> Commission, a panel of politically appointed civilians, makes/enforces the
>> radio regulations by which we all must adhere.
>
> Yes, but that's not the point, is it?

That's EXACTLY the point. Lennie the Lame insists that "we" ae keeping the Code tests. The Commission has clearly stated that they would drop it today if not for International treaties that require it.

>If the opinions of members of
>the ARS and/or the public at large were irrelevant, there wouldn't be a time
>period during which one submits those opinions on regulatory matters.

Those opinions have been expressed. The FCC has determined that the move is away from Morse Code testing. There are those who don;t like it, myself included, however the time for deciding has passed, ergo it's time to move on.

>> That there are opinions that do not reflect that is obvious. Your
>quotes
>> from Google are valid OPINIONS, no doubt, but carry no force of law.
>
> I seriously doubt the logic of a lot of 'em.

I seriously doubt logic has anything to do with it.

>> Yep...enough of that. Unless you can show me a point of law which
>refutes
>> it.
>
> Aren't they required by law to hold public hearings and consider
>public _opinion_?

Yep. And as pointed out by one man in here who worked with the FCC for years, after they hold such "hearing", they can do what they see fit.

> It's not pretty.

Even within my time on the bands I remember the days when the spectrum
above some freq (3 gHz?) was unallocated and open for "experimental
use". Now look at that space. A predictable replay of 1927, only the
location of the decimal points changed.

> >
> > We'll deal with it. As usual.

> Yup. The question to think about is "why aren't the bands used more?"
>
> You're looking at part of the answer.

I wuz also there when hams got kicked off 11M. The ARRL sponsored an
11M contest to promote activity on the band as a shot at "saving it".
Nobody showed up for the party.

There are still a number of people that think it is illegal to own a piece
of
radio gear.

As far as I know, there are only two exceptions (one being cell stuff).

There is NO requirement for permits, licenses, visas, whatever, to
POSSESS equipment for receiving or transmitting in the US.

I see the BS about you 'MUST' have a HAM license to purchase. But
that is a seller policy. It is NOT law.

Oh, the other exception? Technically... If you have a CB set with
'expanded' capabilities, possession is considered proof of use.
UNLESS you have a HAM ticket AND the equipment is only hooked
up as HAM equipment. Like using a modified CB set as the core of
a 2M transverter to get on 2M SSB. But then, once you do that,
the CB set isn't really a CB set anymore, is it? It's just 'parts' that are
now 'rebuilt' into a 2M SSB setup. (Which is how I have an old
TRC-457 hooked up to a homebuilt Hamtronics transverter setup.)
Although technically just having it could still get you in trouble I
suppose...

2471. QCWA Sell-Out!

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-12 15:02:31 UTC
From: John Sielke <w2agnNOSPAM@w2agn.net>
Message-ID: <5g5hevgubuesbpjqgvbtvrlvt37jumremp@4ax.com>
Source record: 68622

It is getting increasingly frustrating, trying to at least limit SPAM. For example, for those of you members of QCWA, in the Summer newsletter, it shows the QCWA BoD voted in October to SELL the member's database to a bulk email outfit! I contacted the GM and President, as I have been a Life Member for 20+ years. Sure enough, it was true, but they cancelled the plan...not because of concern for member's privacy, but because it turned out "they didn't need the money." Needless to say I told them to expunge my records and cancel my membership. Probably useless, but it's bad enough having spammers gathering our data with robots, but having a trusted organization SELLING it was too much.

Actually, Phil wrote that, not me.

The date March 31, 1995 comes to mind as to when the USCG ended Morse
operations. December 31, 1997 was the last day of the requirement for
ships of any size. Oddly enough, on that last day, the freighter MV
Oak sent an SOS and a rescue effected.

Cost of labor vs. cost of capital is the big factor. What the maritime
operators really wanted is to eliminate the radio operators on board
ship. As long as there was a requirement for Morse capability, they
were required to have qualified crewpersons aboard dedicated primarily
(if not solely) to radio communications. GMDRSS eliminated all that,
for the cost of the new equipment.
Depending on the balance sheet, that may or may not be a savings.

On the other hand, use of Morse/CW by radio amateurs continues all
over the world. Participation by hams in contests is increasing, as
evidenced by more logs being received - but only for CW contests.

>
> The existing arguments in favor of code test retention are
> NOT valid.

Sure they are. Here's one:

"Code tests must continue because FCC's interpretation of the ITU-R
treaty requires them".

Until the treaty or FCC's interpretation of it changes, that's a valid
argument.

Here's another:

"Since Morse code is widely and extensivley used by radio amateurs,
particularly on the HF/MF amateur bands, it makes complete sense to
require at least a basic Morse code test for an amateur license that
permits operation on those bands".
>
> The only "validity" is that the already-licensed extras

"Already-licensed extras"? Isn't that redundant? Anyone with an Extra
license is, by definition, already licensed. Same for any other
license class. You, Len, are not licensed, and never have been.

There are radio amateurs of all license classes, as well as unlicensed
persons, who support code testing. And there are radio amateurs of all
license classes, as well as unlicensed persons, who oppose code
testing. You're not a radio amateur. You're Not Involved.

> had to
> take such a test and they seem to insist that everyone else
> must do so, too.

Not at all. Only those who want an amateur license with certain
privileges are required to PASS such a test.

You, Len, are not licensed, and have never passed such a test.
>
> That's just emotional self-righteousness of a very personal
> kind, not at all applicable to the US agency that grants such
> amateur licenses.

Typical ad hominem from you, Len. Try listening instead of judging.

The only "emotional self-righteousness of a very personal kind" going
on emanates from someone who is Not Involved with amateur radio in any
meaningful way....

Here's a tip, Len: Try being positive in your postings here, instead
of negative. You project an extremely negative persona and energy. The
headshrinkers have a term for it: 'toxic personality'.

You're always talking about what's wrong, what has to be eliminated,
how bad others are, how awful Morse code and its tests are, making
accusations of fraud, getting all worked up over typos, defending the
"honor" of worthless, thieving, lying long-dead robber-barons, name
calling, insulting, ridiculing, yada, yada, yada. What a sourpuss!

The negative kharma you've acquired must be staggering...

You never talk about how much FUN amateur radio is, how great a lot of
hams are as people, how many accomplishments hams have made...

oh wait - you're Not Involved with amateur radio in any meaningful
way....

Exactly right, Phil. Immediately following 9-11, I could no longer access the internet via AT&T. It was a week before I was back up on a new (temporary) number provided by AT&T. The destruction of the twin towers severely impacted AT&T and the Rochester, NY, area felt that impact for a number of weeks. I think the key here is 'backup'. A single band HT won't do it. A single HF rig might, given a backup generator (or mobile installation). What will do it is a lot of amateurs with many ways of communicating (and many various sources of power). Same can be said of computers; backing up to another partition on a hard drive is very close to not having a back up. You back up on a separate drive *plus* CD rom (and other techniques, depending upon how critical the data are). The CD rom works for me with only home applications (I've got all the installation disks; only need to protect some data and digital photographs). No one simple answer.

Day before yesterday (10 June) we had a line of thunderstorms roll through here in the late afternoon. On my way to work I heard a "thump-thump-thump" on the local EMS channel of 155.340. This is also known as the HEAR frequency for "Hospital Ambulance Emergency Radio" channel.

Late Tuesday night it was apparent that it wasn't going away. It was irregular and without modulation and was recycling at a 1-2 pulse-per-second rate. When I got off shift at 0700 Wednesday morning, it was still there. I got some initial bearings using my FT-2600 and a hand held yagi, but due to the valley we are in, it was difficult to avoid the ghosting. I finally got a decent steer from a prominent local "scenic view" site below Sewanee, TN. But having been up all night overtook me and I headed for the barn.

At the 0200Z ARES net that evening, NCS gave me the net for a while, and stations from around the area were asked to check 155.340 and report thier findings. After 15 minutes on the net we'd narrowed this down from a 125 square-mile area to a 30 mile area just west of Shelbyville, TN.

I hit the road around 1400Z and started north from Winchester towards Tullahoma, TN and took bearings from the airport. Sure enough, northwest was the plan. I stopped at the Motlow Fire Tower and took a bering from the tower which confirmed my findings from the airport. I continued west until the signal started to drop and then would find the next northbound highway. Eventually I made my way to Lewisburg, TN.

The signal to this point had never been more than half scale on the s-meter, even with the RF squelch off and the AF squelch wide open. Within minutes it was full scale with the RF squelch at "FULL ON" and nothing but a paper clip in the SO-239. Sure enough, I wound up at the door of Marshall County Medical Center. I had thought earlier that it proably was a hospital, but it could have just as easily been an EMS station or a VFD department so I tried to not let myself be swayed by the blue "H" signs, although every time a turn was dictated, there was a sign!

I ID'd myself to the ER staff, first as a fellow nurse then explained why I was there. Sure enough, they said they'd not been able to use the radio for two days and had "griped" it to thier maint department, but they were not aware it was latched in transmit! The maint department man and I walked up the hill to the shed at the base of the tower, and as he opened the door I could hear the "click-click-click" of a ratcheting relay. He pulled the plug and the thumping in my HT went silent!

In retrospect, I would have got this done a lot faster had I had a good step-attenuator at my disposal. Also, the "Lil-Elper" DF unit we use in CAP was not capable of using alternate RF sources, so that was of no use. I think I'll look into the "Vectronics" unit.

Just thought I'd share. It was a really beautiful day to be driving in Middle Tennessee.

In respect to UN/ITU treaties, it does. However it STILL has nothing to
do with US policy or regulations.

Japan is a soverign nation. It will do as it sees fit for it's own
purposes. Nothing it does in regards to Amateur Radio affects US policy or
regulation. Japan does not have a representitve on the FCC, nor does a member
of the FCC have a say in Japan's Post's Ministry.

<snip>

Actually, that is the rationale used by the people who do not "win" the issue. Whe I was running an association, the board often took input from interested people. I was up front that we may make a decision that was contrary to what they wanted. But being (at least) two sides to every issue, some people are just not going to have things go their way.

That's a nice story. I like DFing too. We do a lot of transmitter hunts in my area(recreational). We haven't had to use our DFing skills for real yet, but we'll be ready when called on.

As a "matter-of-fact" statement, then that's
fine. Your intent in the posting was not clear
to me until your response above.

> Since CW is a part of the rich tradition of Ham radio, I am somewhat
> perplexed as to why a fellow ham would be so ready to "attack" a somewhat
> positive reference to the CW mode. Care to explain?

Because I see no need to require CW knowledge for
hams anymore. Other's in the newsgroup are quite aware
of my position on code testing. I care not a bit as to
USE of CW. Use it all one likes, just let's end the
test requirement. Once code testing ends as a requirement,
then folks that want CW to continue as a mode will
have to champion its use and recruit newcomers to
learn. I have no problem with that.

Cheers,
Bill K2UNK

> (temporary) number provided by AT&T.

OK, I'll buy that, but did you _try_ to get on the 'net (not just
ATT) as if your life depended on it? (And how long were you without phone
service? If you've got a phone, you can access the 'net. It might burn up
your credit card to do it, but "expensive" doesn't equal "impossible".)
Anyway, the loss of a node like that isn't supposed to effect the 'net
itself. I used to lurk a _lot_ on some of the *.abuse* groups, and one
subject I remember being debated is, what would happen if you _effectively_
UDP'd a major ISP? (Done properly, which was what the discussion was about,
this effectively nukes that system, it's effectively non-existent as far as
the internet is concerned.)
The bottom line (reached by people who seemed to know what they were
talking about), is that there would be no effect as far as the net goes. An
old expression may apply, regarding why censorship won't work on the 'net:
"The internet interprets censorship as damage and simply routes around it."
Anyway, the whole backup concept applies here, just as it does to
power sources. If you only use one ISP, and it vanishes for whatever reason,
you're off-line.

Where in the treaty does it say that?

How can anyone guarantee that the 5 MHz signals will not leave the
USA?

> See: Japan.

Has Japan allowed its hams on 5 MHz?

The requirement has to do with the license, not domestic use. It also specifically requires a General or higher license for hams to use 60 meters.

Japanese amateurs are not limited to domestic use only.

Here's how the Japanese sytem works (reposted many times). This is Japan's
argument, not mine:

Japan issues ham licenses with HF privileges but with no code test. These are
"4th class" licenses, and Japan uses the following argument to justify not
having a code test for them:

1) The purpose of the ITU treaty is to avoid harmful interference and to
promote orderly use of the radio spectrum.

2) In regards to Japanese amateur radio, two kinds of harmful interference need
to be dealt with: interference to non-amateur radio services of all countries,
and interference to non-Japanese radio amateurs.

3) 4th class Japanese hams' HF privileges are only on frequencies that are
worldwide exclusive amateur, so interference to nonamateur sevices is prevented.

4) 4th class Japanese hams are only allowed to use very low power on HF (10
watts PEP, as I recall), and Japan is an island nation, so harmful interference
to amateurs of other countries is avoided.

Thus, Japan says it is not in violation of the treaty, because its measures re
4th class licenses meet the goals of the treaty. You may not agree with Japan's
reasoning, but to my knowledge no other country has challenged Japan on it in
at least the past 35 years.

Note that the other three classes of Japanese amateur radio license DO require
a code test.

Note also that Japanese 4th classers only have privs on freqs that are
worldwide exclusive amateur. (See 3), above). That leaves out 60 meters.

If/when the code test is eliminated, a General class or higher license will

still be required to access 60 meters unless the rules change.

Would you be satisfied with a US equivalent of the Japanese 4th class license? QRP power and no access to shared allocations?

Lotta reasons for that. 11 wasn't worldwide amateur, so the DX was
limited. 10 was right next door, and more active. 11 wasn't
harmonically related to any other band, back in the days when
multiplier rigs and xtal control were common.

Plus there were the weird noises from vacuum formers and diathermies.
>

Speaking of GHz, an IEEE convention was in town the past few days.
Lotta neat stuff, lotta emphasis on microwaves. All that RF plumbing
looks like an ME's delight...

You're both right. Today's FCC doesn't drop the Morse requirement
because international treaties still require it. But when WARC wanted to
drop Morse a couple decades ago the FCC-led US delegation lobbied long
and hard to keep it. Why? Because "we" were afraid (gasp) CBrs might get
licensed so "we" demamded the code requirement stay in the treaties.

That's a problem with all "commissions". Let's say you just got elected and had to appoint a commission to regulate the coffee industry. You'd naturally appoint people who had supported you and hopefully knew something about coffee. Where would you find them? Well, most likely in mid-management in the coffee industry. Trouble is these appointments are temporary. When you leave office your appointees are going to have to go to their old bosses to find jobs. Need I say that they're likely to feather their nests while commissioners? Wouldn't you?

Still sounds a little bitter to me. Did you have problems learning Morse code? What is the underlying problem here? Frankly, I personally use the Morse code that I studied for the test a lot more than any new 'technical information' I learned studying for the test (particularly since I am a BSEE). What makes you are so militant? Did the act of studying Morse cord cause an irreparable trauma to your self-confidence? Did it destroy your sense of self-worth because other people learned it faster and better than you? Somewhere deep down, there is a story here. Let's hear it so we can help you to deal with it. But you must take the first step.

So far around here, it looks like the score is:

Pro-testers insulting, belittling and otherwise avoiding the issue of
testing: All of 'em.

Pro-testers providing rational supporting argument: Zero

> his pal, David Sarnoff, stealing his patents.

Yup. The Major was in good company: Sarnoff stole from Philo T. Farnsworth's patents as well. Lil' Davey S. thought patent laws were for others, not him.

The falling out started way back in the early '30s, when Davey said he never listened to the radio anymore because the "static" (meaning both manmade and natural noise) was so bad much of the time. He asked Armstrong if something couldn't be done about it. Armstrong did experiments and basically invented practical FM broadcasting in a lab near the top of the Empire State Building. Transmitters, receivers, preemphasis, the whole works were brought to practical operation by Armstrong.

Trouble was, his new FM required all-new receivers, transmitters, and antennas. What Sarnoff had wanted was some sort of gadget that could be tacked onto existing BC sets to eliminate "static", not a whole new system. He wanted the next big purchase people made to be a TV set, not an FM receiver. So he kicked Armstrong out of the ESB and told him to forget about FM.

The Major responded by setting up the Yankee Network, all over New England. He had found an ideal transmitter location at Alpine, NJ, and had a 420 foot tower erected. Rather than depend on 'phone lines or transcriptions, the broadcasts were relayed across New England by VHF radio.

Sarnoff used his influence with the FCC to get the FM BC band moved, so all existing FM receivers became useless. As a consolation prize to Armstrong, FCC required that TV sound be FM. But Sarnoff would not pay the patent royalties, saying RCA circuits did not encroach on Armstrong's patents. Similar tactics were used against Farnsworth.

Real nice guy, huh? Remember, this is the same guy who grossly exaggerated his role in the Titanic disaster...

> Had he waited, he would have been vindicated when Sarnoff/RCA was
> found liable for same shortly after and was ordered to pay
> Armstrong's estate a sizeable sum.
>
Yup. He also lost out in patent suits to Farnsworth. But it all took years and

millions to win.

They say that Sarnoff had tears in his eyes when he was forced to hand over the check. Poor baby...

Armstrong's tower in Alpine still stands, and is still in use. After the WTC towers were destroyed, the TV stations who used to broadcast from them had to find a new location. Some of them went to the company that runs the Alpine tower, and rented space. NBC (descended from Sarnoff's dynasty) had to go hat-in-hand to the Alpine folks for tower space.

Turns out that the coverage from the Alpine tower is superior to what it was from WTC. Major Armstrong had found the ideal site 70 years ago, and it's still in use.

SECRET, huh? FOUO even? Wow, that's news to me. Typically, Emergency Management Plans (like hurricane evacuation plans) are not classified at all -- and for good reason (they need to be shared with civilian Emergency Management Agencies so that a coordinated effort is possible) For example, ALL local EMAs have a copy of our plan (including the Red Cross) type in FS 500-2 in a Yahoo search and see what pops up ... You and Vshah's lack of knowledge on this specific subject is just astounding.
(Oh, BTW, the ARS WILL be used for liaison to local EMAs -- in the plan) We are currently reworking it to make the ARS piece even more robust. Vshah -- you lose the bet.

<SNIP>

It's pretty clear to me (and I am a patent agent and an EE) that DeForrest really was first with regeneration. It's described in his patent for the 'audion' (the triode in modern terminology), and this patent issued four years before Armstrong even claimed to have come up with regeneration. Much is made in 'Empire of the Air' (the book as well as the TV series) of the statement that DeForrest didn't understand regeneration and couldn't explain it in court. This may be true, but it doesn't alter the fact that he came up with it before Armstrong.

The problems between Sarnoff and Armstrong are another matter entirely. I think it is fitting that Armstrong's name is remembered the whole world over. Even people who don't know that he invented FM have heard of the Armstrong method of detection. OTOH, if you mention Sarnoff's name outside the US, the response is likely to be : 'Who? Sorry, never heard of him.' And that's as it should be.

Disagree. The rule WRT to Techs is no Techs below 30 mHz except for
coded Techs who can operate down to 28.000. Sect. 97.401(d) does not
include an exception to that rule. Ditto Novices by virtue of their
set of restrictions.

The amount of misinformation that is spewed out on a daily
basis in this forum defies the imagination. Just got off the phone
with W.O. Johnson at USCG , and was informed that C.W.
is far from a dead issue with the Coast Guard. In fact, they (USCG)
are still training personnel to copy and send C.W.

As I understand patents, all you need do is come up with a "recipe" for
building something
that is not obvious or done before. You don't have to understand
everything about it,
you just have to describe it in a way that someone experienced in the
art can reproduce
it. So DeForest probably didn't know all the physics of the innards of
vacuum tubes,
but produce working tubes and circuits. Not at the optimum levels one
could achieve
if one did undertand the physics behind it, though. But all you need is
that it works at
all....

That may be so, and other posts indicate that CW is still used at sea.
However, the ITU plan was to phase it out by 2000, and the international
code test requirement for ship's radio operators is gone, as is the
requirement for shore stations to listen for distress calls on 500 kHz CW.

We DID???? That sure escapes my memory! In fact what I remember is running a VE team for the first eight years of VE testing and during that time some large majority of examinees came from the ranks of CBers.

What distinguished them was that almost all had decided to become ham radio operators, and study to meet the requirements for their license. Just like we did before there was such a thing as CB.

The sole part of what you say that is factual is that there were indeed some "CBers" who were deemed as undesirables and who were better left out of ham radio. Since most all of those were also opposed to learning Morse code, the result wasn't difficult to understand. They didn't want to become hams if it involved learning Morse code, and knew that studying the question pools for the written tests were no big problem. So yes, there was an attitude against welcoming that segment of CB which was largely known to be lawbreaking Freebanding troublemakers, into ham radio. It should be noted that some of these same troublemaking folks did indeed learn the code and get HF ham radio licenses. Most of them just got no-code tech tickets, and some of them ignored the rules and used those tech tickets to operate on HF, very much against the rules but in that day such violations were poorly enforced, if at all.

Other than that, the rest of your rant is no more than an RRAP urban legand.

Ah. More of what passes for Brain logic. Somehow FCC seems to view it as a different manner.
No surprises there, either,

>

Oh, it's surely right there with your code key, right.

I see you're still numbnuts, as always.

I dont' think so, Bill. More like *anyhone* can use 5.1675 without regard to whether or not they're licensed at all. Of course that isn't true of the five new 60 meter channels.

Yes they can, and you might bring yourself up to date on the case mentioned.
In San Diego a few years ago a licensed ham uses his "oepned up" 2-meter
walkie talkie to call the San Diego county sheriff's office on their channel
when he had what he considered to be an appropriate emergency.
Not only did the FCC office in San Diego confiscate his radio, they made
statements to the effect that the mere possession of a radio capable of doing
that was not legal.
Far as I ever learned they did NOT return his radio to him.

Well, you're rebuttal isn't even logical. How does the fact that
some people learned code prove that the idea that there was a
pro-code-testing 'movement' is urban legend? Boiled down to its logical
components, your statement is:

"Some number of CB'ers learned Morse Code,"

Therefore,

"There is no pro-code-testing group of hams."

Far as I recall, IF it is the incident you're referring to, it was just a
motorist assistance. There was no immediate danger to property or
life involved, just a car off the road.

If the story I heard at the time was accurate, the kid deserved to have
his radio taken, and probably his license.

Mike

> No surprises there, either,

DICK, the FCC views the J3E and R3E Alaska frequency on 5.1675 MHz
differently than the San Diego Sheriff's frequency on VHF. Really.
That's why its codified in Part 97, which you might want to read
sometime.

For you to imply that there is any connection between licensed
amateurs in Alaska using 5.1675 for an emergency in Alaska, and the
use of the San Diego Sheriff's VHF frequency only shows that you're
not a very bright fellow.

> > > > If ya' REALLY want me to file a Petition for Declaratory Ruling and

DICK, when the FCC states J3E and R3E, they don't mean A1A. Really.

> > Don't you know what J3E and R3E are?
>
> Don't you know what license qualifications are? Evidently not. No more than you know what
> permission is.

DICK, Alaska hams have permission to use J3E and R3E on 5.1675 MHz for
emergency purposes. At least the FCC thinks so. Really.

> > Good grief. Yet another case of a elderly, jealous, and vindictive

Such a paradox. You say it does then you say it doesn't.

> Japan is a soverign nation.

Except for the international treaties it has signed.

> It will do as it sees fit for it's own purposes.

Are you absolutely certain of this? Is this unique to Japan, or can
any other soverign nation violate international treaty for domestic
purposes?

> Nothing it does in regards to Amateur Radio affects US policy or
> regulation.

It merely affects the non-adherence to ITU S25 for domestic use, and
sets a precedence for any other treaty nation.

Japan does not have a representitve on the FCC, nor does a member
> of the FCC have a say in Japan's Post's Ministry.

FCC San Diego has a big problem with competence.
It is staffed by unprofessional moronic boobs, who don't know a
volt from a ohm, let alone how to interpret communications law.
There is also a major issue involving prejudice at this office
against the local Hispanic community.

Erasmo Hernandez
Hispanic Community TV/Radio Assn.

See: Japan. In the absense ITU treaty violation with respect to S25,
use of HF by non-code tested amateurs for domestic use is an
acceptable practice.

> How can anyone guarantee that the 5 MHz signals will not leave the
> USA?

See: Japan. How do they contain their signals to Japan?

> on it in
> at least the past 35 years.

Hmmm. No challenges? Not even one?

Then it must be accepted as a valid variance to the treaty.

And if no one has challenged it in over 35 years, is S25 even a valid requirement?

> Note that the other three classes of Japanese amateur radio license DO
> require
> a code test.

Note that the US has licenses that require a code test, but no license that allows non-code tested amateurs on HF at any power level, even though we could.

> Note also that Japanese 4th classers only have privs on freqs that are
> worldwide exclusive amateur. (See 3), above). That leaves out 60
> meters.

Then Japan must not be allowing their 4th classers any privs on 5 MHz.

> If/when the code test is eliminated, a General class or higher license
> will
> still be required to access 60 meters unless the rules change.

Typical of the FCC to box themselves in to all kinds of administrative changes to Part 97 when S25 goes away.

> Would you be satisfied with a US equivalent of the Japanese 4th class
> license? QRP power and no access to shared allocations?

I think such a license would be useful to any number of people.

Don't you?

Arnie, do you confine your emergency operations to domestic natural emergencies only? What do you do when attacked? What is the disposition of your aircraft and rolling stock? Where do you reconstitute? Do you even know which oplans you're tasked under?

You're apparently in the feel good, good neighbor mode. Good luck to you.

Signing a treaty doesn't change the fact that Japan is a
soverign nation.

> > It will do as it sees fit for it's own purposes.
>
> Are you absolutely certain of this? Is this unique to Japan, or can
> any other soverign nation violate international treaty for domestic
> purposes?

The fact that Japan has had a code-free domestic
license is well known. The rest of the countries that are part of the
ITU treaty apparently don't see Japan's position as being

in violation of the treaty... or, even if some do, they have long
since defaulted to approval by simply doing nothing.

> > Nothing it does in regards to Amateur Radio affects US policy or
> > regulation.
>
> It merely affects the non-adherence to ITU S25 for domestic use, and
> sets a precedence for any other treaty nation.

True, yet there hasn't been any wholesale non-adhearance.
Again, perhaps other countires administrations see no harm
nor violation in Japan's position.

> multiplier rigs and xtal control were common.

The old multiplier rig days were pretty much history by then. My 75A4
and Johnson Valiant could operate as-built on 11M for instance. My
point is that hams lost the band but despite the uproar in the ham
magazines and in Newington very few hams actually gave a hoot about
11M. I expect that will be the case again when the FCC shifts chunks
of our seldom-used high bands to the commercials. The NPRM will show
up, the usual compulsive electropolitically correct huge PR and
flag-waving flap will immediately follow, then the FCC will do the
preordained anyway. And once again it'll be a snoozer in the general
ham population.

> Plus there were the weird noises from vacuum formers and diathermies.

For certain. But in that timeframe the FCC also put the clamps on that
type of equipment WRT to allowable EMI/RFI. That was the real flap in
that part of the spectrum because it affected big bucks corporate
fixed investments in capital equipment which suddenly became illegal
to use. The ham side of the overall 11M uproar wasn't even on the
chart in comparison. And the FCC enforced it. They basically cleaned
up 11M for the CBers.

> >
> Speaking of GHz, an IEEE convention was in town the past few days.
> Lotta neat stuff, lotta emphasis on microwaves. All that RF plumbing
> looks like an ME's delight...

It is, been there, done it in volume. It's mostly a manufacturing
engineering challenge. The field is overpoulated with goofy EEs who
don't know which end of a wrench ya grab and come off the wall with
the weirdest . . "What's the problem Kelly?" All ya gotta do is drill
a bunch of square holes." "Yeah, with a square hole drill right?"

Ah, never mind . . !

> Still sounds a little bitter to me.

Not bitter at all... simply to the point?

> Did you have problems learning Morse code?

Not at all. I was an Advanced (13wpm) when the FCC rules changed.
I did not pursue 20wpm before that because the cost in hours of practice
versus
the benefits of additional spectrum didn't merit my investing the time to
go to 20wpm.

> What is the underlying problem here?

There is no rational to sustain a mandated code test anymore
for any ham license. Those that want to promote code use
should be free to do so, but not via a mandated code
requirement.

> Frankly, I personally use the
> Morse code that I studied for the test a lot more than any new 'technical
> information' I learned studying for the test (particularly since I am a
> BSEE).

I have no desire to end your use of morse code. The issue is
the test requirement only.

> What makes you are so militant? Did the act of studying Morse cord
> cause an irreparable trauma to your self-confidence? Did it destroy your
> sense of self-worth because other people learned it faster and better than
> you? Somewhere deep down, there is a story here. Let's hear it so we can
> help you to deal with it. But you must take the first step.

Use the code, learn the code, whatever makes you happy.
The fact remains that learning and using code is no longer
a justifiable licensing requirement. For those that learn and
use code I have nothing but respect...much as I repect
people with many other skills I have no desire to learn (golf, tennis,
etc.) Where things change is in my attitude towards folks who
want to demand that everyone else must subscribe to a
requirement just because they do or did.

Actually, common sense prevails.

Once you modify the equipment, it no longer has it's 'type acceptance'
or whatever it's called these days and is no longer legal for CB use.
Even ON valid CB frequencies at valid CB parameters. It is just a
pie of parts that you now can use as HAM equipment, if you so choose.

There is nothing wrong using it on 10M as long as the use of it adheres
to valid amateur restrictions.

Seems to me that it is relevant. I hear it all the time. Joe B. wants a rule changed or a new rule not added because it's so wrong or whatever (not to mention it gives ol'Joe some kind of advantage) When it isn't changed, ol' Joe whines about how the dirty so and so's just won't listen.

Wrong story. This case was when a hiker fell in the mountains with a
disabling injury, and the ham called on the sheriffs channel after trying a few
ham repeaters and getting no answer. The injury evidently turned out to be not
so serious, and the sheriff was PO'ed because the ham used his frequency. The
story received a lot of publicity at the time. Popular Communications also had
a story on it.
Of course it's difficult to separate the facts from the spin, but the FCC
SanDiego district Director was quoted as stating that the ham had no authority
to possess the radio capable of transmitting on the sheriff's channel.

Geez, Vito, it sure is disappointing that you consider THAT uncivil just because it clashes with your faulty "memory". I do believe I've lived through more of this history than you.

The really sad part of all this is the numbers of you folks who wound up so "damaged" by the simple requirement of a code test. Sure looks like more of an attitude problem than anything else.

With all due respect, I think my term is more accurate. Here's why:
The equine anatomy described by Dave serves a beneficial function. The
product of said anatomy may be unpleasant but it is not usually toxic
in the medical sense (I'll defer to your toxicology background on
that). And said product has beneficial uses.

Can you say the same thing about....

'zactly.

--

Ever notice how there are some people who are just plain nice to have
around? They may not be the smartest, or the richest, or the most
attractive, or the most accomplished, but when you spend some time
with them you feel better than you did before, for all sorts of
reasons.

Among them are people from whom you can always learn something useful,
people who are always there to help out, people with whom you can
communicate freely and honestly, people who have an innate common
sense, people with a good sense of humor, and a whole list of other
traits and combinations of traits. People who are slow to criticize

and quick to praise, slow to anger and quick to smile, etc. People who see the glass as half full rather than half empty, and then they go and get a smaller glass. People who ask little and give much. People whose example inspires and uplifts you to be a better person.

You know people like that, don't you, Steve? They may not have all of the above, and they may not be perfect, but the overall effect they have on those around them is generally pleasant, uplifting and positive.

Then you have folks who are exactly the opposite. You know people like that, too, I suppose.

Why not spend more time on the first group and less time on the second?

You codehaters are really something else!

Japan chose, for reasons and with justifications detailed by N2EY, to institute a domestic HF codeless license. No other countries have protested on the same basis-there are no negative effects noted on them. No other country has to "consider" Japan's decision in any way. No other country is invoved. If Japan wants to do that, no one else is involved.

So our FCC does not decide to do the same. One could glean from all these plaintive posts that FCC is somehow thus considered derelict.
. What nonsense! The dereliction is on the part of those who refuse to meet the existing qualifications because they happen to "feel" they aren't "proper". It's disgusting!

The old codehater's mantra just won't go away. Never mind the lost communcations capacity, just hang with the phony "Just because we had to" That is the most lame of a variety of lame excuses.

EVERY ham should have to learn basic Morse code. Sure, FCC doesn't care, it's just more work for them. Anything involved in licensing is more work for them.

So, bottom line: Novices and Tecs have exactly the same authority as unlicensed individuals in this instance.
It's a simple statement of fact.

When they sent me the spam to join QCWA, I told 'em I wasn't old
enough. A ham since 1957, I'm ONLY 57!

QCWA and ARRL trying to take ham radio back to 1938 is just wrong and
will lead to its early demise.

Seems like you blame all longtime licensed hams (all of whom are Morse qualified, thus suspect) for the actions of the FCC. Sorry, FCC doesn't pay much attention to anything I have to say, best as I can determine. I suspect that may be cuz I don't spend the big bucks in places that gets their attention. But I see they do seem to follow international treaties fairly well. Guess that must have a lot to do with their actions.

But your next paragraph is even more troubling..

> Requiring Morse
> before allowing people to talk on recreational (amateur) bands is the
> same as requiring a flint-and-steel campfire before renting a hotel room
> in a national forest.
>

That simply shows that the fellow that wrote it doesn't know much about the subject. Radiotelegraphy is a quite efficient communications mode, that is when those persons attempting to communicate with it have learned how to go about it. Under your rant/scenario no such thing is even implied.

> Have a good weekend,

This is very true. Every ham who has a license for <30MHz really has a moral responsibility to society to learn Morse code because society has bestowed upon them a Federal license to use this rare and valuable spectrum. When the occasion arises for the ability to communicate in this manner, in an emergency, or even for health and welfare, it is the Ham who is given the privilege in our society to donate his/her time and efforts to lend a helping hand to communicate with others, whether it be the Caribbean, Mexico, Central America and/or other places where CW is the only economically affordable mode.

Would today's Hams be ready to answer the call if asked? Not all, that's for sure. If not, why bother giving him/her the privilege to use bands capable of long distance CW propagation? What is it, really, that differentiates us from CB operators (not to knock them). What? Technical knowledge? Not with today's exams.

No it doesn't. The word "microphone" isn't all capitals.

There were hams on AM 'phone back in the 1920s. There were even some hams like
Ray Moore, W6DEI, on SSB (or as they knew it, SSSC) in the early 1930s.
>
>Do you think the microphone is the same period as the transmitter?

I know it is. The transmitter dates from the '30s or '40s. The D-104 was
produced as early as 1934.

And you are apparently in smartass mode, Brian. You know as well as I do that we have plans that cover all of the above. The one I chose to talk about has an ARS piece, a need to be shared with local EMAs, and is (most importantly) unclassified. Emergency Management covers a wide spectrum of contingency planning, mitigation strategies, and post-disaster/incident response models. You can't explain why a Hurricane Evac plan isn't classified, so you try the old smoke and mirrors to deflect the argument. Why am I not surprised?

Yes it is an attitude problem. I have nothing against Morse as a hobby
mode, in fact I hope to use it alot when I retire - maybe even get good
at it. OTOH I deeply resent people using unrealistic barriers to keep
others from sharing what is, after all, public property. Requiring Morse
before allowing people to talk on recreational (amateur) bands is the
same as requiring a flint-and-steel campfire before renting a hotel room
in a national forest.

Have a good weekend,

That argument didn't sell with the FCC.

> just hang with the phony "Just because we had to"
> That is the most lame of a variety of lame excuses.

The "excuse" is that neither you nor anyone else
has provided any ratioinal reason to mandate a
code test anymore. The only reason one exists today is the
ITU treaty.

> EVERY ham should have to learn basic Morse code.

Because?

> Sure, FCC doesn't care, it's

I could make the same argument with regardto hams having
to learn Spanish. As to moral obligations...sorry, there is
no such obligation for any ham to ever even listen to CW
signals.

>The old multiplier rig days were pretty much history by then. My 75A4
>and Johnson Valiant could operate as-built on 11M for instance.

The Valiant was a multiplier rig, not a heterodyne type. In fact EFJ only made three or four heterodyne-type ham rigs - the Pacemaker, the Invader/Invader 2000, and the Avenger.

>My
>point is that hams lost the band but despite the uproar in the ham
>magazines and in Newington very few hams actually gave a hoot about
>11M.

Yup. But the Newington folks knew that if they didn't make a stink, they'd be derelict in their duty. Plus FCC might be encouraged to try it again.

One big factor was the Great About Face of December, 1952, which gave all hams except Novices and Techs full operating privs, plus the opening of 15 and the addition of a 'phone subband to 40 (both about 1954). Before those changes, Generals and Conditionals could only do 'phone above 25 MHz and on what was left of 160. So way back then 11 and 10 were really popular with the 'phone folks, particularly those interested in mobile and dx.

>I expect that will be the case again when the FCC shifts chunks

Probably. But if no resistance is offered, what canl be said when they want
half of 20? Besides, for a lot of amateur purposes (satellite, EME, etc.) it's
better to have a few MHz exclusive-amateur rather than a lot of shared MHz.

Yup.

One relatively unknown story is how diathermies disappeared all of a sudden.
Once upon a time they thought high-intensity RF exposure was good for ya!

Some of those old diatehrmy machines wound up as parts soureces for ham finals.
'Specially the power supplies and big tubes.

I'm not sure what this "domestic" stuff is about. AFAIK, there's no limit on
any Japanese ham working DX.

>No other countries have protested
>on the same basis-there are no negative effects noted on them.

Historic note: Way back in the '50s, there was some sort of problem, because
the JA nocode license allowed higher power. Japan responded by lowering the
power level to QRP levels.

>No other
>country has to "consider" Japan's decision in any way. No other country is
>invoved. If Japan wants to do that, no one else is involved.

Actually, any other nation can protest. But to my knowledge nobody has.

The lack of a protest or penalty does not mean no violation has occurred.

Besides, guess where most hams' rigs were made? Wonder if that has anything to
do with it.....

It's interesting to note that the number of Japanese ham stations peaked in
1995 and has been going downhill ever since. (Japanese operator licenses never
expire, only station licenses). In a few years we may pass them in numbers.

>We are good operators and have knowledge of propagation and skip conditions.

Congratulations. Now, how about learning the finer points of operating
according to applicable regulations?

>We use Yasus, Kenwoods and Icomm radios just like you do, so we know technical
>issues as well or better.

But apparently not the proper way to spell "Yaesu" and "Icom"...not
that this is all that relevant to the point you're trying to make.

>However, the attitude of some hams toward us is
>rude and condescending. We are treated like 2nd class citizens.
>This should not be. We have the same rights under the constitution as legal hams do.

Correct. However, it isn't the Constitution that grants hams the
privileges that our licenses grant us. Nowhere in the Constitution nor
any of its Amendments does it mention anything about ham radio.

Notice if you will that I am saying "privileges" rather than "rights"
because I believe there is a difference.

Furthermore, along with rights (and privileges too, for that matter)
come responsibilities, including the responsibility to operate your
equipment in accordance with applicable regulations when you exercise
your privileges to operate that equipment.

In fact, if you are not licensed to operate from 27.405 to 28.000,
then you have NO operating "rights" to be there at all. Thus, you
relegate yourselves to the status of second class citizens by
demonstrating to all who care to observe, that you have no respect for
the law. This is why you get verbally b***h-slapped, not only by hams
but also by law-abiding 11m CB operators, every time you sound off
about operating where you have no business being. We're not trying to
be rude. We're not trying to be condescending. We simply perceive that
you, unlike the majority of us, fail to understand that if we carry
your logic to its fullest exdtent, the result is absolute anarchy. The
rest of your post - and my comments added below - more fully
illustrate my point:

>For those that do not wish to be under Uncle Sam's thumb, freebanding is
>a viable alternative to getting a ham radio license.

For those who do not wish to be under the thumb of the Internal
Revenue Service, robbing banks and liquor stores is a viable
alternative to getting a job and paying income taxes.

> What I am saying is
>that maybe the next time you meet a freebander it might be wise to talk with
>him before you condemn him.

I'm not necessarily condemning you. I am condemning your illegal
activities. I'll leave the business of condemning you to the legal
system if you're ever court - it's their job, not mine.

How do you feel about Tim McVeigh, Jeffrey Dahmer, and John Wayne
Gacy? Most decent people condemn their actions. Perhaps you do as
well...they were all mass murderers. Have you talked with any of them
first before condemning their actions?

Some of the freeband frequencies actually have licensed users to whom
the frequencies are allocated. Here's a question for you: Are you
actually licensed to operate anywhere in the RF spectrum? How would
you like it if the legitimate users of the frequencies in question
here decided to just jump in and use the frequencies you are licensed
on because they felt it to be a viable alternative to getting licenses
for the frequencies allocated to them?

And please, don't give me any of that nonsense about the frequencies
not being used anyway. When you park your car, it's not being
used...how would you like it if I came along and decided to
re-allocate it for my own use, since you aren't using it anyway?

While we're at it, while you're out grocery shopping and your house
isn't being used, I'll just re-allocate your stereo, TV, VCR,
microwave, radio equipment, and any money I find laying around for my
own use as well. After all, you're not using it right now, and it's a
viable alternative to me getting a job and paying taxes and thus being
under Uncle Sam's thumb...so by your own logic, you should have no
complaints if I help myself, right?

Sorry, dude, but you'll have a hard time convincing me you're anything
more than a freeloader who wants to exercise the benefits of living in
a free society without accepting the responsibilities that go with
them. None of us has the Constitutional right to pick and choose which
laws we will obey and which ones we will break...and so just because I
have a license granting me the privilege to drive a car (which is also
not mentioned in the Constitution or any of its Amendments) doesn't
make it okay for me to go screaming through a school zone at a hundred
miles an hour just because I choose not to be under the thumb of the
local legislators who decreed a 15 MPH speed limit there for the sake
of the safety of the kids who attend classes there.

I do agree that the technical proficiency of many freebanders is comparable to even the most competent of hams. However, that in itself will not gain you acceptance by the vast majority of radio hobbyists, any more than the marksmanship skills demonstrated by the Texas Tower Sniper will gain him acceptance from the guys and gals down at the local skeet-shooting club. Having the skills is only half the battle. Now show us that you can apply them properly.

If you mean besides playing music and otherwise interfering with other
stations, running excessive power levels, and trying to impress
everyone within range with your extensive vocabulary of obscenities,
the answer to your question is, "Nothing."

> taken and passed a morse code test. :-)

You've long disliked that there are others who have more experience in
something than you. In any endeavor, there are going to be people with
more experience than you, Leonard, old bean. In amateur radio, there
are a number of children with more experience than you. :-)

> I was legally communicating on HF a half century ago and
> passed a commercial test (first class) 47 years ago.

You weren't communicating on HF as a radio amateur and your commercial
test is irrelevant to amateur radio. If you want to be a radio amateur,

you'll have to start at the beginning.

> I don't need any "licenses" to discuss any federal regulations.

No, you don't. You need a license to be a part of amateur radio.
You aren't a part of amateur radio.

> The First Amendment of the US Constitution grants me that

Sure it would serve a purpose, *Foghorn. It would show that your
conveniently snipped statement is a false one. That means that you
simply aren't telling the truth.

You were called a **horse's ass because being a horse's ass is your
demonstrated pattern of behavior here. You don't play well with others.

> You feel your amateur extra gives you some kind of "right" to do or
> say anything you want, to act a "superior" any time you need your

> in here.

Incorrect, Leonard. The same Constitution you often quote gives me the
right to state my views here. Further, since I am involved and have
been actively involved in amateur radio for forty years, my views
reflect experience. That, if nothing else, sets them apart from yours.

> You really ought to think hard about running for office, like being
> executive president of ARRL for life. That would make you VERY
> important. You could lord it over everyone once a month in QST
> editorial pages and tell everyone how You KNOW How Hams
> Should Be. No problem. :-)

See how little you know? League presidents don't even have regular QST
space. They don't attempt to "lord it over" anyone. What is any of
that to you? You aren't a ham and you aren't a League member.

> Now go back to Living In The Past in Google. Be as vindictive as
> you want to be...you are certainly "superior" in that regard.

Ahh! I think I see the source of your confusion. Google isn't some sort
of time warp. It is only an archive in which can be found almost all of
your posts to this newsgroup. Do you view seeing your current claims

compared to your previous statements as vindictive, Len? The words I'd quote would be accurate accounts of things you've actually stated here. Are you ashamed of them? Why else would you consider seeing them again as "vindictive"?

> It's not going to make a lot of other hams love you, Colonel. That
> IS what you are after, isn't it? :-)

Love me? What a peculiar thing to think, Foghorn*

*Foghorn: One of the nicknames Len receives when he resorts to names like "The Colonel" or "Jimmie". Foghorn Lenhorn is based on the loud know-it-all cartoon rooster from the Warner Brothers cartoons.

**Horse's Ass: The end of the horse farthest removed from the head. It is the portion producing road apples.

But, Foghorn, just a few lines ago you commented that Jim isn't involved in "UHF and above" frequencies. Your latest statement is certainly reciprocal. It would mean that you have NO idea of his involvement in "UHF and above" frequencies. It would mean that you have NO need to know and NO authority to know. One thing is for certain: Whatever your involvement, it certainly isn't happening under Part 97. You have nothing to do with that.

> Go to bed, Colonel. Be sure to take off your jackboots first.

What are you--some kind of control freak with a Nazi paraphenalia fetish?

> US amateur and using far more modes and modulations
> than are available to any US amateur.

I didn't see anything indicating that you have any experience in amateur
radio whatever during your half century. You don't sound like a very
good judge of what's best for amateur radio.

> >After all, you aren't involved in any way with amateur radio.
>
> Still using that schtick, ey Colonel? :-)

It is still as true today as ever, Foghorn.

> >What are you--some kind of geezer with a control obsession?
>
> No, you are. You need someone to Hit on to satisfy your
> curious personality...especially since long ago when you were
> criticized for poor procedure in US government radio
> communications.

These words seem to be a contradiction to your denial of a control obsession. You weren't any more involved in my government communications job than you are in amateur radio. It hasn't stopped you from trying to be an expert in either area. You're irrelevant to either subject; not involved; an onlooker.

> You just can't take negative criticsm, Colonel.

I needn't take it from someone who hasn't the qualifications for it, O Prince of Pontification, Guru of Gigaherz, Maharishi of Modulation.

> Now go to bed...and don't forget to remove your jackboots first.

See? An obsession with control...and nazi paraphenalia.

What makes that a problem, Leonard? Amateur radio is open to all races
and any of the several sexes. Hams tend to concentrate on their common
ground, not upon what makes them different from each other. But you
wouldn't know about that. You aren't involved.

> Such hams will have great fun putting down
> anyone not of Anglo-Saxon ancestry or "western" ethnics.

Build your own premise and you're sure to come up with your own
conclusion. Vipul isn't running into problems because of his ethnicity.
His difficulties come from faulty thinking.

> No "western" given name? Oh, wow, great opportunity for calling
> such all sorts of depreciatory names, making fun of them for not
> fitting in with "being American." That's getting more typical every
> day in US amateur radio.

I don't know if that's the case in amateur radio. I have acquaintances
the world over with non-western given names and surnames. They don't
get called depreciatory names. None of them are made fun of. Then
again, none of them attempt to argue things such as "amateur radio" and
"ham radio" being two separate things.

Things outside of amateur radio might be different. Let's take your situation as an example. While I've never observed you calling non-westerners depreciatory names, I've see you do quite a number of things with names like "Steve", "Jim", "Dave", "Larry", "Dick" and "Brian" among others. That must be a special reverse of the circumstance you described--maybe because you feel that YOU don't fit in or because you don't feel that we're sitting quietly at our desks, respecting you.

I can agree with that statement because the ONLY purpose allowed
for 5.1675 IS an emergency.

Cheers,
Bill K2UNK

Oh...??? WHAT document resinds a nations soverignty?

>> It will do as it sees fit for it's own purposes.
>
>Are you absolutely certain of this? Is this unique to Japan, or can
>any other soverign nation violate international treaty for domestic
>purposes?

I didn't say it was right, LilLennie...I said they are a soverign nation
and they do wha they want to.

You still have not shown how Japanese radio policy has affected UN policy.

>> Nothing it does in regards to Amateur Radio affects US policy or
>> regulation.
>
>It merely affects the non-adherence to ITU S25 for domestic use, and
>sets a precedence for any other treaty nation.

It sets a precedent for making up one's own rules when the rules they
agreed to don't suit them anymore. See: Japan.

> Japan does not have a representitve on the FCC, nor does a member
>> of the FCC have a say in Japan's Post's Ministry.
>>
>> Steve, K4CAP/K4YZ
>
>Wonder whatever happened to all those US callsigns issued for Japan.

No US callsigns are presently assigned to Japan.

There ARE callsigns assigned to US Armed Forces in Japan when operating from US bases, under US control, and in accordance with rules established by the United States Air Force.

They are prohibited from communicating with Japanese Amateur Radio stations. Only US citizens who have obtained a Japanese reciprocal license issued by Japan's Posts Ministry may communcate with Japanese station, operate mobile, etc.

See: Auxiliary Military Radio System.

No, this is not a backwards accronym for MARS.

You know it doesn't always work that way, Bill. They could form a
lobbying group whose aim would be to lower the requirements. Lots of
"someones" refused to meet the requirements of just a few years ago. :-)

Denial by whom, Alun? While we all know that the overwhelming majority of
delegates will vote to simply drop S25.5, there's always a chance something
will stop that particular process. Best not to assume anything until it
actually happens. There ARE some countries still in favor of S25.5, and if they
have some deals to make, things could go in any direction.

For my money, the interesting action will be to see what FCC does if/when S25.5
disappears. I'm guessing that they will simply drop Element 1 without even an
NPRM. I know there will be at least one proposal in FCC Hq. in a matter of
hours after the treaty is ratified, if the new treaty drops S25.5

The issue I really want to see dealt with is the 40 meter mess.

They did NOT refuse to meet the requirements. Taking a
proactive role and position on changing requirements is
not the same as what Dick's statement addressed.

As to forming a "lobbying group" to change code requirements,
we all know that is already in place. I am a charter member
of that group (NCI) and hold a position on the Bd of Directors.
If anyone finds that "disgusting" that's just too bad.

Up to that point you are correct. There is always a chance that not all
agenda items will be discussed. I think, however, that this has been
skipped over so many times that they are under quite a lot of pressure not
to skip it again. On those previous occasions it didn't get an agenda
number, but this time it is 1.7.1. All in favour of 1.7.1 say aye -Aye.
Now how long did that take?

>There ARE some countries still in
> favor of S25.5, and if they have some deals to make, things could go in

The wording pre-agreed allows those countries to keep Morse testing. It is
likely that it will be kept in many former Soviet countries. Your scenario
of this being voted down due to a deal is therefore laughable.

I don't really see how the FCC can do an end run around the usual process, which normally takes about a year. So, I for one am not expecting Element 1 to be dropped until this time next year.

OTOH, in the UK, which is where I am originally from, the RA has already started it's required six week consultation period so that the comment period will close on July 11th, one week after the end of WRC 2003. This is timed to allow official publication of dropping the code test on August 1, 2003, taking immediate effect from that date.

If the FCC has a predetermined plan like that, we don't know what it is.

>

Well, I've read all the proposals in CQ. If we are to beleive CQ, then we are likely to get 7100-7200 made worldwide within a year or two (Phase I), and maybe 7200-7300 some years later (Phase II). Phase II seems much less assured than Phase I, and neither seem 100% certain.

I dunno Jim. It always confused me that for several years, you could get the questions and answers for the FAA pilot exams, but not for the FCC amateur exams or commercial radio exams.

I always wondered if that means knowledge in radio is more important than knowledge in aviation!

I recall having to use study material with no questions and answers for my ham exams and 1st class commercial phone, then took a ground school class for the private pilot written and all the test questions and answers were in the class material.

But, I may just be easily confused!

Then you should know that there is NO pilots license ever issued on the basis of any written exam. That comes after practical hands-on training by a skilled and certified CFI. And even then, it comes only after a perspiration-inducing flight examination by a steely eyed professional flight examiner, usually under contract to the FAA. Would you *really* want to fly with a pilot who had no training other than studying the written exam pools?

Definitely apples and oranges.

A copy of his license that actually says TECH PLUS will do nicely. Take
both the original and a photocopy.

Maybe. To a lot of folks, amateur radio is a small-potatoes legacy service.

>On those previous occasions it didn't get an agenda
>number, but this time it is 1.7.1. All in favour of 1.7.1 say aye -Aye.
>Now how long did that take?

Not long!

But are such agenda items decided by majority vote, or must there be a
consensus? I seem to recall that it's not just who has the majority, but I
could be mistaken about that.

>>There ARE some countries still in
>> favor of S25.5, and if they have some deals to make, things could go in
>> any direction.

>The wording pre-agreed allows those countries to keep Morse testing. It is
>likely that it will be kept in many former Soviet countries.

Sure - but that's not what I'm talking about. I'm referring to keeping S25.5,
not individual countries keeping code testing.

>Your scenario
>of this being voted down due to a deal is therefore laughable.

Then we'll have a good chuckle over a Black & Tan sometime!

The point I was trying to make about a "deal" is that some countries may hold
out as a bargaining tool. "You vote our way on issue X and we'll vote your way
on issue Y". Happens all the time.

>> For my money, the interesting action will be to see what FCC does

>> if the new treaty drops S25.5
>
>I don't really see how the FCC can do an end run around the usual process,
>which normally takes about a year.

Here's a scenario for ya - a bit wordy, but worth the read:

Way back in 1998, FCC put Restructuring on the table in a now-well-known NPRM.
One of the issues they asked for comments on was Morse code testing.

Out of the ~2200 comments and reply comments received, the majority not only
wanted code testing to continue, but also wanted code tests of at least two
speeds to continue. Those who wanted no code or 5 wpm only were a minority.
Lots of reasons given on both sides, which we can take as read because we've
both seen them lots of times.

But FCC swept aside the majority opinion and said in its R&O that there was
Morse code testing for any class of ham license served "no regulatory purpose"
other than compliance with S25.5. And since 5 wpm was the minimum test that FCC
thought complied with S25.5, 5 wpm was retained for treaty compliance, and no
other reason.

A few months after the R&O, a Petition for Reconsideration was sent to the FCC
on the issue. FCC denied the petition, saying essentially that their minds were
made up.

Now it's three years later. If/when S25.5 goes away, FCC can simply say
something like "We considered all of the issues and arguments re code testing
way back in 1998-99 and again in 2000. Back then we said S25.5 was the only
reason we kept the 5 wpm test. We still think that way, and without S25.5,
there's no reason to keep Element 1 any more. So we're just going to eliminate
the Element 1 requirement"

IOW: "We hashed this out three-four years ago, and we're just following up on
what was decided back then"

Reasonable?

Although I hope it doesn't play out like that, I see no reason why it couldn't. One quick paragraph from FCC dropping Element 1 for all General and Extra. Easy.

>So, I for one am not expecting Element
>1 to be dropped until this time next year.

Depends on ratification, too.
>
>OTOH, in the UK, which is where I am originally from, the RA has already
>started it's required six week consultation period so that the comment
>period will close on July 11th, one week after the end of WRC 2003. This
>is timed to allow official publication of dropping the code test on August
>1, 2003, taking immediate effect from that date.

RSGB and RA work very closely, from what I hear. Almost too closely for some folks. Ever hear of the UKRS?
>
>If the FCC has a predetermined plan like that, we don't know what it is.
>
I don't think it's predetermined, just possible. FCC might do the NPRM thing - I'm just saying they might avoid a lot of delay and paperwork. Heck, with an NPRM, both sides may launch massive comment campaigns, making more work for FCC, and possibly causing them to once again deny the majority opinion.

>> The issue I really want to see dealt with is the 40 meter mess.

>> 73 de Jim, N2EY

>Well, I've read all the proposals in CQ. If we are to beleive CQ, then we
>are likely to get 7100-7200 made worldwide within a year or two (Phase I),
>and maybe 7200-7300 some years later (Phase II). Phase II seems much less
>assured than Phase I, and neither seem 100% certain.

Again, nothing's certain till the ink is dry. SWBC is a big deal to some folks. From what I read, those are the current hot proposals, and the old 6900-7200 proposal has all but disappeared.

Wouldn't it be GREAT to have 200 or even all 300 kHz worldwide exclusive amateur? 40 is a great band for both domestic and dx, and is usable almost around the clock and around the sunspot cycle. Antenna size is reasonable and simple rigs can work well on the band. Only problem is that there isn't enough of it - yet.

Agreed. However, since he got it before 1994 (presumedly in 1993, since that is 10 years ago), it may simply say "Technician." In that case, he will need to bring his code element CSCE (and a copy of the CSCE) as well.

Code CSCE's before April 15, 2000, are valid forever.

Huh...?!?!

The Q&A for plot exams sure wasn't public domain when I took my Private
written in 1974.

>I always wondered if that means knowledge in radio is more important than
>knowledge in aviation!

I think if we reviewed the timeline we'd find that the FCC led the way in
mediocrity and foolheartiness.

As pointed out by others, the written part of FAA exams was but one part of the
requirements. Note also that a pilot's license alone doesn't qualify someone to
design/build/maintain/repair their own airplanes....
>
>I always wondered if that means knowledge in radio is more important than
>knowledge in aviation!

Different things entirely. Raises a question, though - can a pilot's license be
renewed indefinitely without any sort of retesting or recertification?

>I recall having to use study material with no questions and answers for my
>ham exams and 1st class commercial phone, then took a ground school class
>for the private pilot written and all the test questions and answers were in
>the class material.

Was there someone who did to the FAA what Mr. Bash did to the FCC?

As I have heard the story, what Bash did was to ask hams coming out of FCC exam
sessions what the questions and answers were, and pay for the information. From
the recollections of many, he was able to recreate the exam Q&A fairly
faithfully.

Huh?

Current FCC policy says the CSCE is good for one year for TESTING credit purposes. It is good "forever" for the purpose of granting the Novice HF privileges to a Technician.

How's that for Uncle Sam logic?

Gee Dick, I must be confused again, dang it!

Didn't see any comment in my post that claimed the written test was all that was required for a pilots license. I was talking about the WRITTEN exams years ago between the FAA exams and the FCC exams and the open question pools..

I guess maybe I was writing between the lines with my secret computer ink. I hate when I do that...
I've turned that option off in this post, so there shouldn't be any hiddened messages.

Not just that there isn't enough of it. If I hear a DX station I can't call him back unless he is listening up, and if I call listening down most of the DX never listen where I can transmit. Yes, I only use phone, but I think you probably guessed that already.

Yes, many DID refuse to meet the requirements for various license classes until the standards were changed. Taking a proactive (how I hate that useless word) role on changing requirements for a self-serving end is the route a large number took.

> As to forming a "lobbying group" to change code requirements,

Yes. As long as ya continue to pass the medicals. There are three
classes of medicals with varying times between exams, etc., gets
complicated, nothing like it in ham radio.

When suddenly there are no functioning Comcast cables or Ma Bell dial
tones hardwired or otherwise what ISP do you dial into?

Private pilots must undergo a "bienniel flight review" with a certified flight instructor and have their log signed off that they have done this to be legal. This was instituted for safety reasons. The flight instructor reviews the pilots flying to try to determine if he has developed any unsafe habits and to reinforce his proper flight skills.

Some how- I can't imagine how- you managed to distill that from my post.

NO where did I even imply there is no pro-code testing group of hams. I DID state that those hams had no control over whether or not code testing exists. But SURELY you already knew that. Vito strongly implied that procode hams are responsible for the existance of code testing becuse we didn't want any CBers to become licensed. History PROVES that to be incorrect.

Do you really believe that I would have been a VE for years if that was true, when a large portion of applicants were CBers, who did become licensed under my team? That's what you're saying.

exists.

If they didn't, how could NCI have any sway in the matter today?

>are responsible for the existance of code testing

Persistence, I think. At the beginning, it was arguably necessary.

> becuse we didn't want any CBers to

You're saying that the amateur community and the ARRL had ZERO
influence in the matter?

> Do you really believe that I would have been a VE for years if that was
true,
> when a large portion of applicants were CBers, who did become licensed
under >my team? That's what you're saying.

Hardly. The CBers you're talking about were willing to jump through
the hoop.

Nice dodge of the question, not that I was talking to you. Jim's
implied that the internet was down due to 9/11, but he only specifies that
he couldn't connect through his regular ISP. This simply does not prove that
the infrastructure in question was actually down, only one part of it.

I think you're incapable of directly answering a question put forth
by anybody that disagrees with you regarding Morse Code, and you've got NO
grasp of logic.
Jim stated that he couldn't access his usual ATT dial-up account.
This doesn't prove that he couldn't access the internet, does it?

Thanks Dee. I'm not sure what his present ticket says but will find out. I
am concerned that after moving a few times he may not have the original CSCE.
One thing I DO know for sure is that the FCC ULS database shows his license
class as Technician Plus. Is that considered sufficient documentation?

Dick's comments said that a significant number of CBers decided to become
licensed Amateurs and then met the existing requirements to do so.

He did not mentuion Code. Just "the requirements".

One need not mention "Code" in todays context in order meet "requirements"
either.

>Not just that there isn't enough of it. If I hear a DX station I can't
>call him back unless he is listening up, and if I call listening down most
>of the DX never listen where I can transmit.

Split operation for DX has been common for decades. No big deal. The 40 meter
situation is worse because:

1) the DX can't work you on-freq using 'phone even if he/she wants to.
2) the DX has to try to hear you through multi-KW SWBC

>Yes, I only use phone, but I
>think you probably guessed that already.

I remember this discussion from before.

Getting the SWBC out of 7100-7200 or even all the way up to 7300 will solve a
lot of problems.

The entire phone system in that area was jammed up. You have to go over
local lines to get to the long distance lines. Phone traffic often took
more than an hour to get into and out of the area for an extended period of
time. The emergency workers could not have operated effectively on this
basis, thus the advantages of wireless.

Keep in mind that all commercial services, including the internet, are
designed for handling normal traffic volumes with a SMALL margin for peak
traffic. Even with no problems of any kind, there have been occasions when

that peak volume exceeded the capacity and people could not get through when they wanted to (you have probably experienced this when trying to call family at certain times of the day on major holidays). When you combine damage to the system with a major increase in traffic, commercial systems simply are not the right method to handle emergency traffic. They can't handle it efficiently and that includes the internet. Emergency preparedness agencies in this country know that and in most areas actively solicit the involvement of amateur radio operators.

I got my Tech Plus in 1992 and it said Tech Plus on it.

It's another Sunday on 14.313 and guess who
is on there playing Gospel and C&W music
again....????

Yup......It's "him" again. (complete with his new
mode of operation...."Hi-Fi" SSB)

Don't y'all wish this goofball would go back to holding up
his (bad grammar filled) hand written "hell and brimstone"
posterboard signs on the streetcorners in the
downtown business district, just like he used to do
in days past...?

Why is it in Ham Radio do we always *seem* to attract
all the screwballs and ex-mental patients? Can someone
explain this...?

I have seen a nice variation on this theme, a set of hub caps with corner
cube reflectors mounted appropriately... Apparent speed changes rapidly
hopefully preventing the detector getting a good lock.

Sorry, Robert, that's faulty logic. The existence of a comment system does not prove public comment is seriously considered by The Commission. They are free to ignore public comment and act however they think best. It's NOT a democratic process.

Three examples:

In the recent restructuring, the majority of comments were not only pro-code-testing, but pro-code-testing with at least two code test speeds. FCC went with the minority opinion and enacted minimum code testing.

Also in the recent restructuring, the NPRM proposed 4 license classes and new standards for the written tests. But the R&O enacted three license classes and reduced written testing dramatically. Why?

In the NPRM for the new 5 MHz allocation, the vast majority of comments were for a band 150 kHz wide, allowing a wide variety of modes. FCC unanimously endorsed the proposal - but then, AFTER the comment and reply comment periods had ended, NTIA sent a letter to FCC opposing the idea. (This was long after Sept 11, 2001 btw) FCC had to backpedal furiously from its position.

> Current FCC policy says the CSCE is good for one year for TESTING credit
>purposes.

You're both somewhat right and somewhat wrong.

CSCEs are good for 365 days (not one year, which has burned a few folks each leap year). After that they are not good for any element credit, code or written.

However, certain expired documents ARE good for element credit:

Quoting Part 97:

ï¿½97.505 Element credit.

(a) The administering VEs must give credit as specified below to an examinee holding any of the following license grants or license documents:

(1) An unexpired (or expired but within the grace period for renewal) FCC-granted Advanced Class operator license grant: Elements 1, 2, and 3.

(2) An unexpired (or expired but within the grace period for renewal) FCC-granted General Class operator license grant: Elements 1, 2, and 3.

(3) An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Plus Class operator (including a Technician Class operator license granted before February 14, 1991) license grant: Elements 1 and 2.

(4) An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Class operator license grant: Element 2.

(5) An unexpired (or expired) FCC-granted Novice Class operator license grant: Element 1.

(6) A CSCE: Each element the CSCE indicates the examinee passed within the previous 365 days.

(7) An unexpired (or expired less than 5 years) FCC-issued commercial radiotelegraph operator license or permit: Element 1.

(8) An expired FCC-issued Technician Class operator license document granted before March 21, 1987: Element 3.

(9) An expired or unexpired FCC-issued Technician Class operator license document granted before February 14, 1991: Element 1.

(b) No examination credit, except as herein provided, shall be allowed on the basis of holding or having held any other license grant or document.

(End of Part 97 quote)

Note that an old expired Tech can be good for Element 3, and an old expired Novice or Tech can be good for Element 1. But a CSCE more than 365 days old gives no credit. Only a license can carry element credit beyond 365 days.

>It is good "forever" for the purpose of granting the Novice HF
>privileges to a Technician.

Yup.

> How's that for Uncle Sam logic?

Makes no sense at all.

It gets worse - consider these scenarios:

Expired Novice or Tech-with-code licenses are good for Element 1, but other expired-beyond-the-grace-period licenses are not. So someone who held a Novice 50 years ago and let it expire gets Element 1 credit, but someone who held an Extra and let it expire 732 days ago gets no credit.

In similar fashion, an expired Tech from before March 21, 1987 is worth Element 3, but not Element 2! Also, no other expired-beyond-the-grace-period license is worth written element credit.

Huh?

If there is no service where YOU are, there is no service. When a
catastrophe happens, the fact that the systems work in other places is
100 percent irrelevant in the area in which the emergency is going on.

DIfferent argument. If someone took out any particular ISP, no one
would notice? I'll bet you a cup of coffee that the users of that ISP
would notice.

> Anyway, the whole backup concept applies here, just as it does to
> power sources. If you only use one ISP, and it vanishes for whatever reason,

Do you carry two cell phones?

You seem to be looking at this from an incorrect perspective, Robert.
The area in which communications is needed becomes precisely the area in
which it doesn't exist. The person trying to call for help with his cell
phone sin't going to get through if his signal isn't getting out because
the tower was blown down by a hurricane or tornado, or if th ewhole area

is without power. If the phone lines are down (or even just blocked because everyone's relatives are calling to see if their loved ones are okay, you won't connect to your ISP. If the cable goes down, I can't connect to mine.

Hogwash. All he's said was that the ATT ISP was down, NOT his phone
system.

>When a
> catastrophe happens, the fact that the systems work in other places is

Man, reading comprehension is definitely in short supply around this
place.

Again, re-read what's been said. An ATT server is NOT his phone
system. In fact, the way he worded things, it sounded like his phone system
was working, it just couldn't get through to THAT server.

>If someone took out any particular ISP, no one
> would notice? I'll bet you a cup of coffee that the users of that ISP
> would notice.

Yes, they probably would. Too bad that's irrelevant to the point.

> > Anyway, the whole backup concept applies here, just as it does

No, I'm simply looking at the survivability of the system, starting
with Mr. Hampton's point.

> The person trying to call for help with his cell
> phone sin't going to get through if his signal isn't getting out because
> the tower was blown down by a hurricane or tornado, or if th ewhole area

If you'd bother to actually _read_ what I've said, instead of having
some sort of knee-jerk reaction as if I'm supporting the original incredibly
stupid troll, the entire question revolves around, in this specific
instance, if Jim's phone was working or not. He was external to the disaster
area and has implied that it was impossible to connect to the internet -
I've simply asked if he tried any other options - if he didn't, then his
anecdote is useless.

...But the FCC didn't issue any "Technician Plus" licenses between February 1991 and June 1994 - so proof of this license class will ONLY be on a CSCE. Very few people applied for a corrected license. Those who got code CSCE's after June 1994 should have a license that says (or said) "Technician Plus" on it, but some VE teams may not have gotten the word in a timely manner.

Now, as for "logic", note that only an expired Novice or Technician license can give credit for code, while expired (beyond the grace period) General, Advanced, or Extra licenses will not - yet they oviously have a code element embedded in them. There was LITTLE to no logic in the FCC's ruling.

If he has the license that says such, he doesn't need the CSCE.

Perhaps you bought your license?

The FCC didn't make the distinction between Technicians with code and without
until June 1994 - at least as far as their licensing database goes.

It should be. Print it from the FCC database and take it along. All Tech Plus licensees passed a code test.

Dick

Robert,

There's a lot of that going on on the anti-test side, too.

Perhaps you can point out to me where I've insulted someone without
provocation.
>
>Pro-testers providing rational supporting argument: Zero
>
How about this:

The tests for an amateur radio license should be based on what hams actually do with radio. For example, the writtens contain lots of questions on FM repeaters because there are lots of amateur radio FM repeaters. The writtens contain zero questions on FM stereo multiplex and doppler radar because very few, if any, hams do FM stereo multiplex or doppler radar.

On the HF/MF amateur bands, manual Morse/CW is used widely and extensively by hams. It's the second-most popular mode on those bands, and there are times when it is the most popular mode on them. Manual Morse/CW is such a big part of HF/MF amateur radio that it's only reasonable and rational that there should be a test for that skill, since skills cannot be tested with written test methods alone.

Now some folks may say they have no intention of using Morse/CW, so why require them to learn it at any level of skill, even the most basic? If we follow that reasoning, however, most of what's in the written tests has to be eliminated as well. For example, why someone who only wants to operate modern manufactured equipment have to learn so much theory? Why learn the band edges, mode designators, or formulas when you can look them up?

What it all boils down to is that the test requirements are based on opinions, nothing more. Almost all of the anti-code-test arguments can be used against the writtens - would you want a no-theory license?

Personally, I found the test to be imbalanced; I'm not idealogically
wedded to any ideas about changing it, though.

methods
> alone.

What a ham _needs_ to be (imo) is a good operator/technician - his operations, in whatever mode or band, should be conducted lawfully, skillfully and with his equipment operating within the specified norms. That's what the testing should 'select' for, again, imo.

> Now some folks may say they have no intention of using Morse/CW, so why require
> them to learn it at any level of skill, even the most basic? If we follow that
> reasoning, however, most of what's in the written tests has to be eliminated as
> well. For example, why someone who only wants to operate modern
>manufactured equipment have to learn so much theory?

Your delving into what some would call part of the very definition of amateur radio, aren't you? Anyway....theory applies across the board, to all radios, all bands, all antennas and feedlines and what-have-you. All hams, sort of by definition, operate radios. They should all have some basic understanding of what radios do and how they do it, so they can operate properly, within given parameters. That some few people (or nearly all of 'em) only plan on operating "modern" equipment is irrelevant, possibly even a red herring; we're _all_ operating radios of various types, and they all obey the same laws of physics.

>Why learn the band edges, mode
> designators, or formulas when you can look them up?

I'll agree with that, actually. A good operator will either wind up knowing 'em through repetition, or look things up to be _sure_. Testing for it seems pointless as it doesn't demonstrate anything but ability to memorize. As to formulas, I have the perfect solution - provide the formulas, plus some. Print 'em on the back of the circuit diagram sheet, and use questions that'll show knowledge of actually knowing how to put 'em to use. Throw in some formulas that are just plain _wrong_, like scrambling up Ohm's law. If somebody understands _theory_, they can figure out what's bogus and what isn't.

> What it all boils down to is that the test requirements are based on opinions,
> nothing more. Almost all of the anti-code-test arguments can be used against
> the writtens - would you want a no-theory license?

The argument doesn't apply because, as I said, we're _all_ using radios, and the theory applies across the board.

But those licenses (general, advanced & extra) required code faster than
5WPM. To some
brearucrat, faster code speed is not the same as 5WPM, and the new rules
spelled out
"5 WPM". He may have thought that 13 or 20 was easier than 5? The guy
was probably
someone who usually did rules for broadcast radio or TV.....

Does it really require more knowledge and skill to operate on 14.160
than on 14.305?
Power levels are the same, equipment and antennas are the same. Only
reason for the
distinction on frequency is that your (suppressed) carrier frequency is
easily measured
at a remote location. It's not like VFR vs IFR in general aviation....
Ham radio didn't suffer any degradation of safety because of Bash. Bash was
the equivalent of say someone looking at his older brother's high school
algebra
tests when studying for his own algebra test. Or the frat house's
library of
previous year's tests at some college.

That is not my responsibility..... that is yours if you have a issue with it.

Again, re-read the original message. "seems like i remember" does not indicate anything more that an attempt to refresh the memory. It was never stated "I know "so-n-so said so as a fact."

Noticed on Comedy Central (that is a comedy related channel on cable tv for the hams here, no its not public tv or NPR) the "Insomniac with Dave Attel" show featured a foxhunting crew somewhere near Albequrqe (sp.?) New Mexico.

Thought it was kind of interesting to see it on that channel!

Why not use it? What the hell could it hurt? I have personally gotten at
least 50 or more miles on SSB on six meters. Sounds like a case of the old
line "Hi, I am a ham radio operator, I have tons of friends around the
world.....but none in my backyard."

The bands above 2.4 gig I don't see alot of use for, but I am sure there are
others that would differ in opinion. Christ, we don't utilize the
frequencies we do have between 50Mhz and 2.4Ghz enough.....

I'd like to see you spend a week in the desert with a satellite
radio and a case of c-rations, might jolt some sense into that thick skull
of yours so you'd understand the concept that "ISP down" doesn't equal
"phone lines down".

Interesting! I find the test unbalanced, too - tests many things at a very
shallow level. Juast my opinion, of course.

How do is the test imbalanced in your opinion?
>
>> On the HF/MF amateur bands, manual Morse/CW is used widely and extensively

>skillfully and with his equipment operating within the specified norms.
>That's what the testing should 'select' for, again, imo.

OK, fine - then it makes sense for there to ba a test of basic operating skill.
And Morse/CW skill is a basic operating skill in amateur radio.
>
>> Now some folks may say they have no intention of using Morse/CW, so why

>> manufactured equipment have to learn so much theory?
>
> Your delving into what some would call part of the very definition of
>amateur radio, aren't you?

Perhaps - but there are plenty of folks who would say Morse/CW skill is
part of the very definition of amateur radio, too.

It's one thing to say "hams should be knowledgeable about radio theory"
and quite a different thing to say "hams should have to pass Test X in
radio theory to get the license".

>Anyway....theory applies across the board, to all
>radios, all bands, all antennas and feedlines and what-have-you.

But not all of the theory. To operate HF CW, I don't really need to
know very much about VHF propagation, FM repeaters, satellites,
and a whole lot of other stuff that's on the test. But those things are
a big part of passing the written test.

>All hams,
>sort of by definition, operate radios. They should all have some basic
>understanding of what radios do and how they do it, so they can operate
>properly, within given parameters.

Agreed - but they don't all operate the same radios. How much theory is needed
to operate an HT?

>That some few people (or nearly all of
>'em) only plan on operating "modern" equipment is irrelevant, possibly even
>a red herring; we're _all_ operating radios of various types, and they all
>obey the same laws of physics.

Sorry, that "laws of physics" line is a red herring. Practical radio is more
about technology and engineering than about physics and science.

>>Why learn the band edges, mode
>> designators, or formulas when you can look them up?
>
> I'll agree with that, actually. A good operator will either wind up
>knowing 'em through repetition, or look things up to be _sure_. Testing for
>it seems pointless as it doesn't demonstrate anything but ability to
>memorize.

So there goes a big chunk of the written test. In fact, most of the regs are
memorization....

>As to formulas, I have the perfect solution - provide the
>formulas, plus some. Print 'em on the back of the circuit diagram sheet, and

>use questions that'll show knowledge of actually knowing how to put 'em to
>use.

Such as? Remember, the structure of the test is multiple choice.

And there's still the question - why MUST those things be on the test? Why
can't
hams simply look up, say, the theory of dipole antennas, rather than having to
answer
any questions on them?

>Throw in some formulas that are just plain _wrong_, like scrambling up
>Ohm's law.

On the formula sheet?

>If somebody understands _theory_, they can figure out what's
>bogus and what isn't.

Perhaps - but why test for those formulas at all? Our licenses are for
operating, not solving problems in theory.
>
>> What it all boils down to is that the test requirements are based on
>>opinions,
>> nothing more. Almost all of the anti-code-test arguments can be used
>> against
>> the writtens - would you want a no-theory license?
>
> The argument doesn't apply because, as I said, we're _all_ using
>radios, and the theory applies across the board.
>
Only the most basic theory applies across the board. And there's no requirement
to use any particular technology, just as there's no requirement to use any
particular mode.

2663. More Rants Fizzle...Lennie's Going Down For The Count...

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-16 12:31:15 UTC
From: k4yz@aol.com
Message-ID: <20030616083115.04279.00001165@mb-m04.aol.com>
Source record: 68759

The Associated Press ran a nice pro-Amateur Radio item entitled "Amateur radio helps in disasters" in the Sunday papers. Locally it was on B2 of the Chattanooga Times Free Press.

The first rant to fizzle is the assertion that Amateur radio doesn't get any "general media" time. Seems to me the Associated Press is sufficiently mainstream in anyone's book.

The next one is in paragraph three of the story. Seems I am not the only one who considers Amateur Radio to be more that "just" a hobby..."Actually, it's a public service" says the AP item. "Some" person(s) in this forum (unlicensed, and obviously poorly informed...) has insisted that no one outside of Amateur Radio is aware of it's emergency preparedness role. Seems that assumption is incorrect.

The item goes on to discuss Skywarn and Amateur Radio's move into the digital age. More rants fizzle in the hands of disinterested third parties....

It adds a personal touch, mentioning briefly the "family tradition" of W5UGD and how KA2CLX and her hubby became Hams together.

All in all....Good PR for Amatuer Radio from a respected source.

It just keeps getting better and better.

"I'm laughing at the superior intellect..."

Ah, so it wassn't "meeting the requirements" by learning a basic communications skill widely used in ham radio, it was just "jumping through hoops". I see. You're just another kid avoiding everything you can avoid.

Bye!

Basically, they are proposing to legalize longer callsigns - I think that
the current rules only allow for four characters following the country
prefix e.g. one digit plus three letters max. They are not proposing
compulsory callsign reissue - just allowing for longer callsigns to be
issued if the national authority feel it is necessary.

Explains why your mouth is always going at full-throttle.

Try reading it all over again, but for _comprehension_. One person's
anecdote about a specific ISP doesn't mean diddly, not without further
clarification on what he actually attempted to _do_.

A long long time ago in this thread, some anonymous person (just like
you "Robert") noted that:

Quote from Tarapia Tapioco:

>>>Nobody lives on the Sun except some silly
>>>CW coders.
>>>For serious rescue transmissions on Earth, THE
>>>solution is Internet, not CW.

>>>Anyway CW will be dead soon, D-DAY minus
>>>48 hours for WRC-2003 !

End quote from Tarapia Tapioco.

That one ISP going down does not affect the web is not in question. The web was designed specifically to not be vulnerable to individual nodes being up or down. Maybe *you* are arguing that, but the rest of us are responding to the initial posters assertion that the Internet is the way to go for emergency comms.

Go back and read the thread from that angle, and maybe it will make a bit more sense to you.

> CW coders.
> For serious rescue transmissions on Earth, THE
> solution is Internet, not CW.
>
> Anyway CW will be dead soon, D-DAY minus
> 48 hours for WRC-2003 !

End Quote

And in the context of what that anonymous poster noted, if he couldne't
get through, and if he was in one of the nodes where there was a need
for comms, then there would'nt be any comms if that were the only method
available.

>

He said he could no longer access the internet from AT&T. I believe
him. After a week, he apparently got on with another number. If he was
involved in emergency work and using the internet for it, it wouldn't
have worked.

>

> options - if he didn't, then his anecdote is useless.

Sure, from that perspective no one node going out will bring the whole network down, cell system or internet. They aren't designed that way. No argument there. No point in arguing it either - its as close to a given as you can get.

But he didn't imply that no one could get on the net. He specifically wrote that HE could not get on via AT&T until a week later.

Phil Kane however noted in a previous post that "for serious emergencies, say bye-bye to the Internet". This is a very broad statement, but within the context, he was correct. This is because in the area in which the emergency is, there is very likely not going to be any available internet or cell phone coverage, due to the support structure going away. And those places are where the communications are going to be needed.

Why do you post anonymously?

2673. Upgrade from pre-1987 Technician to General class

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-16 14:48:25 UTC
From: Graybeard <law32@earthlink.net>
Message-ID: <ZMkHa.50657$lo.4783085@newsread2.prod.itd.earthlink.net>
Source record: 68768

I feel like I am beating a dead horse, after reading several posts, but I still have a problem and need help. I obtained my Technician license in 1984 while working at Motorola in South Florida. Moved several times while there and no longer have original license documentation.

I recently retired and moved to the West Orlando area in Florida, and changed the address on my license. I would now like to upgrade to General Class, which I never obtained in South FL since most of my friends were on the 2-meter repeaters there.

From the information that I have read, the FCC does not maintain old data base info; only the current license data. I obtained info from web site QRZ.com which lists my original 1984 license date from the March 1993 QRZ Ham Radio Callsign Database. I printed the info from the web site.

I also read that I must apply at a VE session showing evidence of having held a Technician license prior to 1987 to obtain a General Class upgrade. Will the copy of the QRZ.com info be acceptable to the VE? Is that all I require?

Also, can anyone tell me how to find a VE in the Orlando area, since I recently moved here and have been inactive.

Pretty much what we go into below - too much stuff (like bands) that
a 'newbie' really should look up before he keys his radio anyway. What I
think of as regulatory 'trivia', etc.

> >
> >> On the HF/MF amateur bands, manual Morse/CW is used widely and

skill.
> And Morse/CW skill is a basic operating skill in amateur radio.

But there's no practical test of any _other_ operating skill. How
many Techs (or anybody else, for that matter) know the entire phonetic
alphabet? Too many people grew up on a diet of 1-Adam 12, etc. and have been
overexposed to the excreble result of the telecom union and "Frank, Adam,
Baker, heck, lets just make it up as we go' phonetic alphabet. As a
genuinely fundamental 'skill', an entry-level test ought to at least require
the examinee write out the phonetic alphabet. This isn't going to cost more

than a scrap of paper and a moment of the VE's time. Some _general_
knowledge of Q and Z signals (well, just Q I guess), net procedures, that
sort of thing.

Yes, in the past.

> It's one thing to say "hams should be knowledgeable about radio theory"
> and quite a different thing to say "hams should have to pass Test X in
> radio theory to get the license".

> >Anyway....theory applies across the board, to all

> But not all of the theory. To operate HF CW, I don't really need to
> know very much about VHF propagation,

You don't need to know anything about propagation to operate any
radio in any mode, but that knowledge will make your operation more
effective.

> FM repeaters, satellites,
> and a whole lot of other stuff that's on the test. But those things are
> a big part of passing the written test.

There's that imbalance again. Chicken and egg - the first radio I
bought was a 2-meter, and it's hard to argue that I didn't go that route
because of a certain amount of emphasis. And now, my existence as a user
of 2-meter increases the number of users - which in the long haul (generally
speaking) could lead to even more emphasis on the test, because gee whiz
we're getting all these people on 2-meter, gotta be sure they know what
they're doing.....hhmmm.

> >All hams,
> >sort of by definition, operate radios. They should all have some basic
> >understanding of what radios do and how they do it, so they can operate
> >properly, within given parameters.

>
> Agreed - but they don't all operate the same radios. How much theory is
needed
> to operate an HT?

None, but that's true of any radio. The argument here is, really, do
you want just operators, or _skilled_ operators? Learning and knowing theory
promotes operator _skill_, while CW/Morse simply does not, if it did, it'd
be required for that reason alone for professionals. That it's being phased
out across the board is sufficient proof that it's irrelevant to having good
operators; a lot of that other 'stuff', on the other hand, isn't.

> >That some few people (or nearly all of

I'm not sure what you mean by 'practical' radio. Are you arguing
(for whatever reason) that theory should be dropped in favor of
tech/engineering type questions?

> >>Why learn the band edges, mode
> >> designators, or formulas when you can look them up?

are
> memorization....

Yep. I'd say the only regs that ought to be tested should do with
safety and emergencies. Anything else can be looked up and will be learned
through use.

> >As to formulas, I have the perfect solution - provide the
> >formulas, plus some. Print 'em on the back of the circuit diagram sheet,
and

>

> Such as? Remember, the structure of the test is multiple choice.

Testing techniques isn't my strong point, but I've seen it done.
Having the answers available is a bigger stumbling block.

> And there's still the question - why MUST those things be on the test? Why
> can't
> hams simply look up, say, the theory of dipole antennas, rather than
having to
> answer any questions on them?

You're arguing from the erroneous position that knowledge of morse
code is as fundamental as knowledge of radio wave propagation without having
actually _proven_ that it is, and in the face of a lot of real-world
evidence that it's not.
If we accept that the idea is true, then to properly test for
practical knowledge, then facility in all modes needs to be demonstrated.
This is patently a ridiculous notion.

>
> >Throw in some formulas that are just plain _wrong_, like scrambling up
> >Ohm's law.

> On the formula sheet?

Yep.

> >If somebody understands _theory_, they can figure out what's
> >bogus and what isn't.
>
> Perhaps - but why test for those formulas at all? Our licenses are for
> operating, not solving problems in theory.

The testing is supposed to be creating a 'pool of skilled operators
and technicians', if I remember correctly. A skilled operator/technician
understands theory, and if a person understands theory, they can easily
solve problems in it, hence testing for it would be a valid requirement.

> >> What it all boils down to is that the test requirements are based on

I disagree with where you went with that.

>And there's no requirement
> to use any particular technology, just as there's no requirement to use

any
> particular mode.

Actually, there is. To use that HF technology, I have to use Morse
Code at least once.

It _all_ makes sense to me. What the supposedly sensible posters
apparently don't get is that the information regarding what happened with
ATT during 9/11 is wholly insufficient to reach the conclusion that's been
reached.
I suggest YOU go back and re-read what I originally asked of Mr.
Hampton. And if you're going to get into a thread started by an idiot troll,
don't assume that ensuing serious discussion (as I _initally_ assumed; my
bad) supports the original idiotic contention.

Source record: 68770

The International Telecommunication Union's (ITU) World
Radiocommunication
Conference 2003 got under way June 9 in Geneva, Switzerland. More than

2600 delegates and other participants are expected to attend the
four-week
conference, chaired by Dr Veena Rawat of Canada.

"Several items on the conference agenda are of great importance to
radio
amateurs, so the International Amateur Radio Union has fielded its
largest
team of observers at an ITU conference in more than a decade," noted
IARU
Secretary (and ARRL CEO) David Sumner, K1ZZ,

And now, a NOTE TO ALL THE HOPEFUL.....

Sumner said that, while there's been plenty of informal discussion about

the issues, no final decisions have been made yet. "It is important to

remember that nothing is final until the second reading of a document
in
the Plenary, which--in the case of controversial issues--will not take

place until the final week of the conference, June 30-July 4," he
said.--IARU news release

Whew! At least you can hope they don't run out of time before it
happens....

Yeah, he seems to think the Internet is a single entity instead of a large number of internetconnected networks. "Infrastructure" would mean any significant portion of it, not the whole.

It should be, as I understand present rules. But you can get all your questions answered by going to website www.arrl.org and asking them. They can tell you how to get in touch with a VVE team in your area.

Not "all", just a selfish but vocal few who had nothing to do except
defend their priviledges from others. Code requirements have diminished
as they died off. IMHO FCC does pay much attention to what ARRL says
hams want - part of their "police yourself" policy. Example: bandplans.

Yes, because Morse efficiency more legendary than factual. But more
important it has nothing to do with *requiring* it to *not* use it. The
Amateur Service is primarily recreational - something we do for fun, not
to earn money, et cetera - and code is fun. That's a far better reason
to *keep* it than BSing ourselves about its efficiency. But it is NOT a
valid reason to keep the *requirement*.

Yes and no.

In terms of purely technical information, no.

But if 14.160 is where the DX hangs out, operating split at the rate
of 200 QSOs/hr, and 14.305 is casual ragchewer territory, then it does
take some more skill.

> Power levels are the same, equipment and antennas are the same. Only
> reason for the
> distinction on frequency is that your (suppressed) carrier frequency is

> at a remote location.

Your argument is against the concept of incentive licensing. Did Bash
only produce books for the Advanced and Extra class licenses? (I
really don't know - I have never seen a "Bash book").

> It's not like VFR vs IFR in general aviation....

Not totally, but there IS a difference. In my experience, 7005 is a
different game than 7050.

And if there's no difference, why not be satisfied with 14.305?

> Ham radio didn't suffer any degradation of safety because of Bash.

I disagree!

Before his books, a prospective ham had only a general idea of what
was on the exam. FCC put out "study guides" in essay format that were
available from the Govt. printing office and reprinted in the ARRL
License Manuals, but they were not the actual verbatim tests. The
prospective ham had to do at least some mental processing to interpret
the actual test questions from the study guide language. And, as
recommended in the study guide and LM, most prospective hams read
other radio books.

With the actual Q&A in hand, that sort of processing was no longer
necessary.

Note that back in those days the Q&A pools were much smaller. In fact,
I have read that there were only 2 or 3 versions of each written test,
and that the reason FCC required a 30 day wait before retesting was to
prevent recognition of the fact that there were so few versions.

> Bash was
> the equivalent of say someone looking at his older brother's high school
> algebra
> tests when studying for his own algebra test. Or the frat house's
> library of
> previous year's tests at some college.

I disagree again! It's more like someone looking at a copy of the
teachers's intended high school algebra test when studying for the
same algebra test.

In the schools I attended, such things were violations of the honor
code and could get you kicked out, even though the tests were changed
every year.

There's also the fact that algebra and college-level tests, open or
closed book, are rarely multiple-choice tests where all you need do is
get enough right answers without showing any work.

I think there are several reasons Bash got away with what he did:

1) It would have been embarrassing to the FCC to actuallyadmit that
they only had a few different tests for each level of license.

2) Bash did not act alone - he had lots of help from those who gave
him the information. Prosecuting all of those people would have been
difficult.

3) Bash never had access to the actual test materials. There were
warnings about those taking tests divulging their contents, but the
rules were vague about someone asking testees about the test. It could
be argued that Bash did not violate any rules or laws, but that those
who gave him info were the real criminals.

4) (This may be the biggest one): FCC was considering getting out of
the testing business anyway, so there was no point in prosecuting
someone for what would no longer be a violation.

All of this is kind of academic now, because FCC isn't about to go
back to private, secret tests.

> Aren't they required by law to hold public hearings and consider
>public _opinion_?

First question: No.

Second Question: The Commission is required to receive and consider whomever's opinion during the comment and reply comment periods but is not required to go with "popular opinion" or any other opinion in the record. as long as sufficient justification for what they decide is articulated in their decisions. A true CYA operation, of which the staff are experts.

Anyone who disagrees with a Commission decision is free to take it to appeal, first to the Commission for reconsideration, and then to the Federal appellate courts. In the latter case, though, the appellant would have to show that (a) that s/he is or will be harmed by the Commission's decision and (b) the Commission violated rules of procedure in reaching that decision. The Federal courts are very loath to reverse on issues which they feel fall within agency expertise except when it involves a high profile political or national policy issue, and believe me, nothing in amateur radio rises to that level.

Been there, tried that, "it ain't easy"....

Actually any signatory Administration can file a complaint with the
ITU if another signatory Administration is in violation, but the
role of the ITU would be as a mediator to resolve the problem.
Unless the complaining Administration can show that the other
Administration's action is causing some harm to it, the complaint
would go nowhere.

The Rules still require that all ships required to be equipped with
a MF (2 MHz band) radiotelephone station must maintain a watch on
2182 kHz and observe the "silent period".

As part of the GMDSS system, all ships over 300 gross tons making
voyages in the open sea were required to maintain a continuous watch
on 2182 kHz by speaker or auto-alarm receiver and a continuous watch
by speaker on VHF Channel 16 (156.80 MHz) until February 1, 1999.

After that date, the requirement shifted to a maintaining a
continuous watch on 2187.5 kHz and VHF Channel 70 (156.525 MHz)
using a muted receiver capable of receiving DSC (Digital Selective
Calling) signals.

That's interesting. So the HF phone distress frequency still exists but is
no longer 2182 kHz, having moved to 2187.5, and listening at specific
times is now superceded by DSC. But are the actual transmissions still
USB? Presumably they are, or everyone would have to invest in new radios?

It also seems that the VHF channels have been changed. Presumably they
still use FM?

You might if you had an HF rig on a small vessel. You might be using it on
the ham bands and then go to call Mayday on 2182, when the Coast Guard are
listening on 2187.5! And then no-one would come to your aid, as you sank
gently beneath the waves...

On the amateur bands, which Jim and Steve say can't be.

No other countries have protested
> on the same basis-there are no negative effects noted on them. No other
> country has to "consider" Japan's decision in any way. No other country is

They are, none-theless, in violation.

> "proper". It's disgusting!

Dick, you're not writing code, so please try to keep the punctuation
within the proper structure.

Anyway, No One has said anything about derelection except you. Why do
you bring it up, then claim I did or Bill did? Some people would call
that lying.

So go ahead and be disgusted that you started a lie. I certainly am.

Meanwhile, all I said was the the FCC could have gone that way. Jim
and Steve say they couldn't have because of the treaty.

I think you all need a nice warm sitz bath.

Dick imagines that people are making complaints. But no complaints
have been made. Now he imagines that code is being blamed.

Poor Dick.

Then there was the eyes rolled back "Code Forever" lobbying group.

The FCC made the No Code Technician license a reality anyway.

Later the ARRL said they had supported the NCT license. They forgot
to mention that they only supported it as it passed.

Poor Steve, he cannot structure a sentence properly.

> >> Japan is a soverign nation.
> >
> >Except for the international treaties it has signed.
>
> Oh...??? WHAT document resinds a nations soverignty?

Of course not, silly. But it does obligate them to adhere to it. So
when you say that the FCC cannot change the code requirement because
of S25, doesn't that mean we have signed over one tiny slice of our
soverignty so that we and other nations can live in harmony?

> >> It will do as it sees fit for it's own purposes.

It should be obvious, Steve, but just for you I'll point it out.

It has weakened the treaty.

Mike, true as far as that goes. But a lot of these guys cannot decide
if they are Hams or CBers. Therein lies the problem with such radios.

Wrong. In an actual emergency, you use what works. Does 60M not work? Let me go review the ARRL's pioneering work during the experimental era of the last few years...

I'm back. It works, or at least the ARRL said it did.

True, but if someone screws it up, it still doesn't create a public
safety hazard, like if
someone doesn't fly an aircraft correctly (could crash killing people in
the craft and
on the ground). And most hams will learn the correct methods quickly
enough on
the air anyway. When I say "screws it up" I don't mean some idiot
playing music
or cursing or such. I'm talking about newbie type errors that someone
gets the
DX contest procedures wrong. Most newbies will learn after a few contacts.

Not sure where I stand on incentive licensing. An arguement for it is
that you can get
better educated and skilled hams by dangling various carrots. But an
arguement against
would be why should the FCC care? Are they in the business of handing
out gold stars?
Someone wishing to do SSTV just reads up about it, gets the equipment
and sets it
up, and can be called successful if he manages several QSOs in that
mode. Having to
take an FCC mandated test is just another essentially unnecessary chore
in the way.
The ham should already know to not cause interference to other QSOs or
services
anyway.

>In the schools I attended, such things were violations of the honor
>code and could get you kicked out, even though the tests were changed
>every year.
>
My schools didn't have a problem with this, as old exams once seen by
students became
"public domain" knowledge for all intents and purporses. Teachers and
profs either
recognized this fact, or didn't really care. We did have honor codes,
but that was
directed to actual cheating during an exam or copying homework. Looking
at last
year's tests was not a violation of the codes we had. Many college
profs didn't
care about undergraduate classes; to them it was wasted time that they
would want
to put towards writing research grant proposals or publishing papers.
My brother is an adjunct prof at the local community college. He
actually creates
a few versions of the same test and randomly distributes the versions to
the students
when the test is to be taken. Word gets around that one can't just look
at the
next student's test and copy, as that answer won't match his question.

My brother
just changes the numbers in the questions, and changes the sequence of the
questions on the different versions.

There's also the fact that what a cheater copies may be a wrong answer
anyway.
Most tests treat a blank answer the same as a wrong answer, so you're
better off
picking a random choice in a multiple choice test than leaving it blank
(you might
get lucky and hit the correct choice). So I used to fill out all the
say "C's" on the
unfinished portion of an SAT test when time was just about up. I
probably hit
a few correct ones that way.

>
>There's also the fact that algebra and college-level tests, open or

>
So you couldn't just memorize "A, C, B, B, A, etc". Had heard that
broadcasting schools
would just teach "the answer to question 5 is C". But looking at an old
test tells you what
the teacher is looking for, and thus what to study. My brother actually
told his students
to, for example, not spend time memorizing the associtive or commutive
laws by name, but
just know that "if A=B and B=C, then A = C".

Essentially the FCC didn't really care. Even the FAA had open question
pools. But
you didn't get a pilot's license just passing a written test.

That is not consistent with the FCC policy at the time. They didn't even have "P"'s in their database to distinguish the license class until June 1994, by which time, you had already upgraded to extra (as of January 1993).

FCC Form 610, March 1992 edition, didn't even have a box for the "Technician Plus" or "Technician with HF" printed on it. The November 1993 edition is the first version of the form to have a "Technician with HF" license class printed on it as an examination result possibility. What you are saying wasn't possible based on the version of the 610 in use at the time.

Hehehe. I had a biology professor who copyrighted everything -
tests, handouts, lectures. He didn't allow tape-recording a lecture, even.
Actually, he wasn't as odd a duck as it sounds, overall, but a bit nutty on
that subject...

Even if he chose to access another service, calls took over an hour to get
through. That makes it an inadequate tool for emergency usage.

To repeat, in the case of the 9/11 disaster, to which the individual was referring when he stated his ISP was down, it is documented that some phone lines were out completely, some cell towers were out completely, and the rest of the system was overloaded to the extent that phone calls took an hour or more to get through if they got through at all. Thus using the internet, regardless of the status of the ISP, is not a viable choice.

Another pronouncement from on high? Since nobody's going to bother to
re-read what started this (and in no way could have been construed to
deserve the incredibly asinine level of insults being hurled by some
apparent 2-year old "hams"), here it is again, not that I expect any of you
pricks to actually _read_ it even when it's being spoon-fed to you:

"Jim Hampton" <aa2qa@frontiernet.net> wrote in message
news:qG4Ga.1325$Cj1.725@news02.roc.ny.frontiernet.net...

> Exactly right, Phil. Immediately following 9-11, I could no longer access
> the internet via AT&T. It was a week before I was back up on a new
> (temporary) number provided by AT&T.

OK, I'll buy that, but did you _try_ to get on the 'net (not just ATT) as if your life depended on it? (And how long were you without phone service? If you've got a phone, you can access the 'net. It might burn up your credit card to do it, but "expensive" doesn't equal "impossible".)
Anyway, the loss of a node like that isn't supposed to effect the 'net itself. I used to lurk a _lot_ on some of the *.abuse* groups, and one subject I remember being debated is, what would happen if you _effectively_ UDP'd a major ISP? (Done properly, which was what the discussion was about, this effectively nukes that system, it's effectively non-existent as far as the internet is concerned.)
The bottom line (reached by people who seemed to know what they were talking about), is that there would be no effect as far as the net goes. An old expression may apply, regarding why censorship won't work on the 'net: "The internet interprets censorship as damage and simply routes around it."
Anyway, the whole backup concept applies here, just as it does to power sources. If you only use one ISP, and it vanishes for whatever reason, you're off-line.

Not only all that, "Robert" doesn't seem to be able to properly mix his
metaphors. C-rations went out with Vietnam and satellite radio sets were not in
use at the time, that was still the era of the T-368/R390A HF stuff.
MRE's would have been the proper cuisine to take along to a desert posting along
with your satellite radio.
Methinks he's a phony.

The FCC is a quasi-legislative and quasi-judicial body, and, like the
federal legislative and judical bodies they are not required to
follow popoular opinion. However, the legislative folks like to get
re-elected, they are expert in at measuring the direction and force of
the prevailing winds.

> Anyone who disagrees with a Commission decision is free to take it

Merely following the procedure does not prevent court from overturning
an FCC decision. In review an FCC decision the court shall consider
5 USC 706, which provides:

To the extent necessary to decision and when presented, the reviewing
court shall decide all relevant questions of law, interpret constitutional
and statutory provisions, and determine the meaning or applicability of
the terms of an agency action. The reviewing court shall -
(1) compel agency action unlawfully withheld or unreasonably delayed; and
(2) hold unlawful and set aside agency action, findings, and conclusions
found to be -
(A) arbitrary, capricious, an abuse of discretion, or otherwise not in
accordance with law;

(B) contrary to constitutional right, power, privilege, or immunity;
(C) in excess of statutory jurisdiction, authority, or limitations, or
short of statutory right;
(D) without observance of procedure required by law;
(E) unsupported by substantial evidence in a case subject to sections
556 and 557
of this title or otherwise reviewed on the record of an agency
hearing provided by statute; or

No, you've got it all mixed up.

What happened is that about 1989 the FCC brought up the idea of a no-code VHF-only license for at least the third time (they had previoulsy proposed such things in 1975 and 1983). ARRL asked members what they thought - specifically, what they thought about a limited-privileges VHF/UHF only nocodetest license. Opinion was just about 50-50. So the ARRL leadership decided to support the idea of a sort of VHF Novice, and made a proposal to the FCC.

This was back when there were petitions to reallocate 220 to other services, which FCC could do under ITU treaty. The ARRL proposal would have put most of the new nocodetest hams on 220 (no 2 meter privileges for them in the ARRL proposal). The idea was to kill two birds with one stone: create a nocodetest ham license and fill up 220 with activity.

But FCC saw through that idea, and rather than adding a new license class they just dumped the code test and the HF privs from the Technician.

Trouble was, that meant there were Techs-with-HF and Techs-without-HF, so some time later FCC had to create the Tech Plus class.

Many things are theoretically possible that turn out to be virtually impossible
to acheive in practice, for a variety of reasons.

Unless something changed since I've been involved, the bienniel flight review is
still in place. I haven't been involved in flying for several years but I can't
imagine that rule would be dropped given the reasons for it in the first place.
Too many private pilots were getting too lax and picking up too many unsafe habits
that caused abrupt termination of their flights.
That doesn't mean some pilots don't ignore it without getting caught.

(1) You have a helluva lot of months in the woods to go to catch up
with my time in the bush. But I have to concede I never did it with a
sat phone. Three cheers for you. Didja build it from scratch or was it
a kit? (2) I'm licensed to operate on freqs which allow me operate
point-to-point globally without having to depend on any comms
infrastructure widgets like satellites, phones or the Internet. And
yes I've done that. In volume. (3) This group is about ham RADIO, it
is not about the Internet. There isn't anybody in this NG who didn't

already know everything you condecendingly babbled on about at great length WRT chasing down alternative ISPs. Rendering your post not only anecdotal but inane to boot. (4) I have no idea what your "position" is WRT to CW or the code tests nor do I give a shit. But lemmee guess . .

Source record: 68865

Thursday of last week, I was at an antenna takedown. They were taking down some tower sections and other stuff from somewhere to be able to have a bigger Field Day setup.

Last weekend, I mentioned Ham radio to a friend. He has an EE degree, but he is now working in the software field. Before I told him about it, he had never heard of Ham radio.

I mentioned that Field Day is coming up pretty soon. I told him when it was- last weekend in June. I told him that Field Day would be the first place to get info about Ham radio, rather than at a club meeting, because you can see actual station setups. He is in another state. He said he would find out where it is in his state.

I told him about the licensing requirement - a simple multiple-choice test that many can pass in one day. I told him about some of the rules of operation and he seemed interested. He seemed interested in the capabilities when I told him about it.

After Field Day, I'll find out if he likes Ham radio.

As did the Sheriff's Department, whose radio tech proved using the
ham's own modified radio that it was possible to make an autopatch
call to 9-1-1 on one or more ham channels from that location. They
had had problems with that individual playing wannabee before.....

So they complained to the FCC, relying on the emphasized-below
phrase of Section 97.403 which stated clearly:

Sec. 97.403 Safety of life and protection of property.

No provision of these rules prevents the use by an amateur
station of any means of radiocommunication at its disposal to
provide essential communication needs in connection with the
immediate safety of human life and immediate protection of
property WHEN NORMAL COMMUNICATION SYSTEMS ARE NOT AVAILABLE.

and the FCC agreed that "normal communications systems" were
available.

Not so. The Rules are quite specific that that frequency is available only to licensed stations in the Maritime, Aviation, Land-Mobile, Alaska Fixed and Amateur Radio Services and only for communications in connection with an emergency.

Broadcast licensees or GMRS licensees or blanket-authorized users in the CB, FRS, and MURS services can't use it unless they are licensed in one of the permitted services.

Amateurs in Alaska were first given permission to use the Alaska Emergency Frequency when it was changed to 5.1675 MHz in 1974. In FCC 86-9, the Report and Order in PR Docket 85-23 in 1986, this permission was clarified by specifying that all classes of amateur licensees in or within 50 miles of Alaska, including both Novice and Technician, were able to use that frequency by having it listed in the tables of frequencies available to each class. With the reorganization of the amateur rules in 1969, the language "any station" was used to cover all classes and the specific listing of that frequency in the tables for each class was dropped.

This was discussed at length in the 1974 R&O that set up that
frequency. Non-emergency traffic - non-critical "quickies" or
otherwise - is permitted only for non-amateur land mobile stations
and then only to call and move off to some other frequency.

From what I understand from my former compadres in the Anchorage
station, this is observed very closely.

If it was the EIC, he had his own ideas about what the law should
be. He is no longer with the agency.

IIRC it was the case officer, who knew a lot better. He passed away
a while back.

All the FCC supervisors in the region tore that case apart for the
actual details which did not always agree with the published stories.

The availabilty of the FAA Q&A is what nailed down the FCC HQ's
decision to go to published Q&As in spite of the wall-to-wall
opposition of the field examining and enforcement staff.

>I recall having to use study material with no questions and answers for my
>ham exams and 1st class commercial phone,

I used commercially-published study guides for those tests in the
1950s and they were in Q&A format - the questions were pretty close,
too.

Bash was the equivalent of someone breaking into the school and
rummaging through the teacher's desk until he found the questions
and answers to the algebra exam.

Those exams were not public information, and the examinees were not
authorized to carry the information out od the exam room or to tell
him what the questions and answers were. It is the equivakent of
stolen material.

We went through this before - do we need to resurrect the dispute
again?

There were five different "series" for each element, and the 30-day
waiting period was to give the applicant an opportunity to repent
for his wayardness, to do some more and better quality studying, and
to avoid waves and waves of applicants at each session.

>I think there are several reasons Bash got away with what he did:
>

See my response to (2) above.

>4) (This may be the biggest one): FCC was considering getting out of
>the testing business anyway, so there was no point in prosecuting
>someone for what would no longer be a violation.

Not exactly. The HQ people - who didn't give or grade any tests
anyhow - were looking for ways for their staff to do less work,
and this was a golden opportunity which eventually ended in
privitization (the VE program). As I said before, those of us who
actually ran the sessions and gave the tests and cared about doing it
right were not in favor of the open book method.

>All of this is kind of academic now, because FCC isn't about to go

The main problem was that the harmonics fell in the aviation bands,
so ISM equipment had to be certified - not only the generator, but
the entire plant - to meet strict harmonic standards. We were still
doing a lot of chasing of heat sealers into the mid-1970s when
new designs came out that met specs.

The main mwthod of cleaning it up was screen room enclosures. ISM
equipment itself can legally generate as much power as desired as
long as it is kept in the range of 27.120 MHz +/- 160 kHz. Find a
way to filter the harmonics but let the fundamental through
unattenuated, run it on raw rectified AC, and you got a super CB
jammer - perfectly legal.

>confiscate his radio,

The SD seized the radio for evidence so they could make the tests described in another post. Their charge supporting the seizure was interfering with a police officer in the performance of his/her duties (Cal. Penal Code Sect. 148).

At no time was the radio "confiscated"...it was seized as evidence, a big legal difference.

>they made statements to the effect that the mere
>possession of a radio capable of doing that was not legal.

That was a bit of run-off-at-the-mouth by the case officer who is no longer with the agency - he passed away shortly after retiring not all that voluntarily.

>Far as I ever learned they did NOT return his radio to him.

The plea bargain, common for first offenders, was that he would voluntarily surrender the modified radio for destruction in exchange for the FCC suspending any further action on his unlicensed operation, contingent on his not violating the law again. Were he to be caught violating again, he would be charged with this offense as well.

Had he not surrendered the radio coluntarily, the Commission would have gone to Federal court to get a seizure warrant and the U S Attorney would institute a forfeiture proceeding, which would have been a routine but time-consuming matter. Meanwhile the SD was holding the radio safe and sound.....

There was a QST article way back in the late 1940s or early '50s. I think the
author was W1DBM. Lot of detail about cleaning up heat sealers whose signals
were chewing up various parts of the bands and causing TVI. Guess who would get
blamed for the TVI.

I recall one Philly business, circa 1965, that got a visit from several of the
local gendarmes. They'd gotten a really good price on a used heatsealer, toted
it up to the 3rd floor of their plant, plugged it in and went to work......

>
>Ew. You're nasty.

No one ever said the truth had to be pretty.

>> I have said I want my country to observe the treaties it signs the
>same as
>> it would expect me to observe the laws to which I am bound.
>
>Even if they are bad treaties? bad laws?

There has been AMPLE time AND opportunity to change that which YOU think
is "bad", Brain. More than a few men and women have gone over those
regulations on more than a few occassions and found them to be adequate and
appropriate for the times and situations.

That those laws are an inconvienience to you and others is
inconsequential.

>> How can we expect other nations to respect us if we pick and choose
>the
>> laws we care to "adhere" to, even the small ones...?!?!
>
>Do other nations not respect Japan? A few years back everyone wanted
>to model themselves after the Japanese, even as they violated
>international code and fishing treaties.

And others didn't. Many find some of Japan's "culture" and "laws" to be
racist and barbaric. YMMV.

>> >I think you all need a nice warm sitz bath.

. Legally and technically, isn't that exam material "intellectual
. property?" If so, wouldn't it fall under the Copyright Laws (Title
. 17)? The US government cannot copyright its own work.
.
. Exactly what would the charges be if someone was arrested
. for divulging exact question-answer content? I'm just asking a
. question on law there. Would it be a criminal or civil case?
.
. Well before "Dick Bash" material there were the "Q&A" books
. on many different federal tests, including radio (both commercial
. and amateur). Younger folks in here don't remember them but
. they were in many bookstores and radio stores back then.

> We went through this before - do we need to resurrect the dispute
> again?

. Absolutely! It is a question of Glorious Honor to Preserve the
. Mightiness of the Old-Tyme Hams showing how great they were
. to have Survived The Ordeals of the Amateur Test! No one dare
. question their claims of greatness and superiority! :-)

>>. radio communication in the International Editions of the Chattanooga
>>. Times Free Press!
>
> So, Your Scumminess, The LA Times no longer uses the AP? You don't have
>access to the AP via AOL in SoCal?

. The Los Angeles TIMES is affiliated with Associated Press and several
. other news wire services. Daily subscription is about 1.5 million and the
. paper was founded in 1881.
.
. The choice of each edition's content is determined by the editors as
. in every newspaper in the USA. Since the LA TIMES covers such a
. large area, there are several regional editions...we get the "Valley"
. edition. The TIMES chose not to print that particular AP article...if it
. existed at all.
.

. The on-line "morgue" of the AP isn't complete and no trace of that
. alleged story could be found on-line. Neither did it show up in the
. on-line morgue of the LA TIMES. ["morgue" is the newspapers'
. common name for archives]
.
. In the on-line archives of the LA TIMES for 7 years back to 1996 there
. are 80 hits for any article having the word groups "amateur radio" or
. "ham radio." Of those, only 20 are featuring amateur radio as the main
. topic of the article...two of them (for 2000 and 1996) cover Field Day.
. The most recent article concerning amateur radio was 27 Dec 02
. about hacker Kevin Mitnick, written by David Ho. [ho ho! :-)]
.
. It's quite safe to say that newspaper editors don't consider amateur
. radio as some of great vital interest to the majority of readers. :-)

>>. Absolutely! Right now, all over the USA eager, interested folks
>>. are clamoring to get into amateur radio as volunteers to aid in

Go get 'em boys...

http://groups.yahoo.com/group/11meteramps/

This group has GOT to be violating Yahoo's Terms of Service. If Yahoo and the FCC get enough complaints, this menace can be shut down before it has the chance to get going.

I notice that there is a marked reduction in the amount of MARS/CAP modified radios being sold by hams (and others) on E-Bay - and it is my understanding that E-Bay finally did something about them once the FCC got into the act (it seems that they didn't do anything about the complaints they got directly, however).

- Stewart (N0MHS)

I had subscribed to PopComm the 1st year. Quit it because of the
lawless attitude concerning pirate boradcasts.

How do you prove you saved a life? I think the emergency is better
"proved" by having a cold body as evidence. Slick talking attorneys
will argue that the danger to life was exaggerated unless you can
produce a body.

This is how to report that kind of stuff:

FCC CONSUMER ALERT
Federal Communications Commission
Consumer and Governmental Affairs Bureau
445 12th Street, SW Washington, DC 20554
1-888-CALL-FCC (voice)
1-888-835-5322 (TTY)
www.fcc.gov/cgb
UNAUTHORIZED EQUIPMENT SOLD ON INTERNET AND IN PUBLICATIONS
The Federal Communications Commission receives hundreds of complaints about alleged illegal (non-FCC certified) equipment being offered for sale on the Internet or in publications. The Commission is monitoring this situation carefully and requests your assistance. If you have any information about illegal or uncertified equipment being offered for sale, please forward it to the FCC. Useful information for the FCC includes:
* An original advertisement or Web address where the illegal equipment is being advertised or offered for sale with the types of equipment about which the allegations are being made, highlighted.
* If it is a Web-auction we will need the name of the auction site, the exact
item number, and auction opening and closing dates.
* Name and address of the individual or business offering the item(s) for sale.
* Complainant's name and telephone number in the event follow-up is necessary.
This information can remain confidential, if requested.
* Specifically, why you think the equipment is not in compliance with FCC rules.
* Number of pieces or types of equipment about which the allegations are being
made (one piece, five pieces, how many models, etc.).
Information can be mailed to the FCC at the address below or e-mailed to fccinfo@fcc.gov.

'zactly.

I remember when K3NYT gave me the Novice exam back in 1967. The
written exam was inside a sealed envelope covered with instructions. I
recall that the envelope was not opened until the exam started, and
the finished papers were put into another envelope and sealed up. That
and all the other papers including a signed statement from 'NYT
asserting that things were done according to the rules. He didn't even
look at the exam papers. The isntructions were clear that neither of
us was to reveal the contents of the exams. Neither of us did.
Wouldn't have been honest.

A lot of this is due to the requirement of radios to be NTIA compliant.
Unfortunately most Amateur rigs on the market today do not meet these
requirements, either "barefoot" or with add-in TXCO ovens added.

Several of the high-end Icom rigs as well as thier "budget" IC-718 meet
the requirements as well as Kenwood's high end rigs and the TS-50 and Yaesu's
FT-1000 variants.

The only Amateur VHF radio (that I am aware of...) that meets any of the
requirements is the Vertex VX-150 HT, and that is only for the "wideband"
requirements which expire in 2K5, I believe.

Then quityerwhining, Brain. Sometimes it goes "your way", othertimes it
doesn't. That's the roll of the dice you play in a democracy.

>> That those laws are an inconvienience to you and others is
>> inconsequential.
>
>Your views were considered inconsequential to the FCC.

Not completely, Brain. I suggested slower code speeds and reduced classes
too, if you cared to read them. They went further than what I thought we
needed to, but oh well.

Like I said, it's the roll of the dice.

>> And others didn't. Many find some of Japan's "culture" and "laws" to
>be
>> racist and barbaric. YMMV.
>

>That sounds racist.

How? It is true. Some people DO find many of Japan's "culture" and "laws" to be racist and barbaric. Espeically thiose relating to the role of women, the stature of the first born son, and thier own generally held views on non-Japanese.

Please try to disprove my assertions if you care to.
>I'm sure you can find a bedpan somewhere.

Bedpans are not used for Sitz's, Brain. Care to try again?

(You're sinking fast, Brain..Ya really wanna keep this up and take ANOTHER round of embarrassment?)

Hmmmmmm....letsee about that...

Unable to argue or otherwise "debate" the content of a statement, you
attempt to attack the method in which the subject was delivered.

And the "soak your head" comments, etc...Straight out of Lennie's
playbook, thoroughly archived in Google and Deja before it.

Lot's of people here don't "agree" with me, Brain...Very few emulate The
Scummy One in doing it. You do, however.

The "nuances in change" have been in the works a heckovalot longer than
with the inception of Japan's 4th class license, Brainiac...The Japanese were
just the first (that I am aware of) to implement some sort of practical form of
that concept.

>> Got your nose rubbed in your own dung and you think you're ahead...!

>Must be one of those insane laughs.

Nope, just the usual "too bad this guy ain't got a clue as to how
rediculous he looks" kinda laughs...The kind you let slip when some guy in an
expensive suit walks out of the men's room with his fly open, or when a woman
has her skirt stuck in her panty hose...

>> >So Japan is once again a soverign nation?

None in Japan. But they issue calls for use outside of Britian on non-British soil. Are you smart enough to know where? There's more than one place, and no, it is neither Gibralter nor Cypress.

>What's going on? I liked the new one.

I do too, but I liked K4YZ better for me. K4CAP will be "blocked" for two years now. We can apply it to a CAP club station later.

Steve, K4CAP/K4YZ.

> Discussing 11 meter amplifiers is not illegal.
>
this is true, we are discussing them right now i guess... however, the intent of that group as stated in their welcome page is to: "This group is here to discuss linear amplifiers used on the 11 meter citizens band. Any information on tips, tricks, wiring, and modifications is welcome." so the group discusses amplifiers that are used on the band, not just sitting on the shelf presumably. also, discussing a crime is not illegal, but providing information on how to do it is called 'aiding and abetting'. They also state: "You are welcome to post ads for anything you are selling, looking to buy or want to trade but divulge personal information carefully and at your own risk.". In this they are also providing a forum to sell illegal amplifiers, which is also aiding an illegal act... and they so much as acknowledge that what they are doing may not be legal by warning members about posting such messages.

Now, if the group was run by hams with a charter like:
"To help licensed amateur radio operators modify and properly tune old 11m amplifiers for use on 10m. And to provide information on how to properly measure amplifier characteristics so they can be legally used on 10m." I don't think anyone would have any problem with it as hams can legally buy, sell, build, and modify their equipment as long as they meet the technical requirements and operate within their license limitations.

Why is this group a "menace"?
I too can think of many yahoo
groups and sites that are on the
razor's edge of legality, however this
is the INTERNET and last I
checked you can discuss anything.

If you don't like it - DON'T GO THERE!

There is a "wastewater treatment plant" about 3
miles West of me. On warm days like we are
having now it stinks of....well...of shi+.
Do I go there and park my car outside the gates
and complain about the smell? No! I just AVOID
the place.

The SAME principal holds true for net sites and Yahoo Groups.

It is not "kosher" to *advertise the fact* that a modified radio
is available on e-Bay. This DOES NOT MEAN that the same
radio for sale/auction is not modified for MARS/CAP.

You are supposed to include a note (taped to the top of
the radio) of such for the buyer. E-BAy need not know
the radio was modified, but the Buyer, should he choose
to operate it, should know. Simple....eh Stewart?

>>is
>>now working in the software field. Before I told him about it, he had never
>>heard of Ham radio.
>
> Good for you.

I usually don't tell the full story all at once. You see, this person is very anti-social. I pointed it out to him. He does not deny it and is not ashamed of it.

We listened to some 2 meter freqs. He noticed that people were mostly talking about their equipment, repeaters, tuning. In other words they were talking about the radios themselves- not socializing. He also did not understand some of the codewords used. I "translated" them.

Anyway, this type of person probably would enjoy the Ham culture.

Most Hams I have met are anti-social. Anti-social former co-worker Ham, Hamfests, Field Day, Wouff Hong ceremony at midnight, random Hams contesting while others socialize.

Chance would require all other aspects to be random. They are not. Most are male, older, talk in codewords, and are anti-social. It seems to be the nature of Hams. It seems to be a requirement - one of the "unwritten rules" of Ham radio traditions.

I was going to apologize about my comments about the random group of Hams that I met being anti-social. I want to take that back now.

I appreciated the generosity. However, I don't think one has to give up everything else for the Ham activities. There was no need for the compromise. It was not more expensive, nor was more work required. I guess it's the standard compromise.

The determining factor is "is there a possibility that it may go
down when needed". If so, it cannot be relied upon to be there for
emergency planning purposes. That's why our local hospitals rely on
ham radio,- voice, packet, and SSTV. It WILL be up, because all
stations - including dual repeaters - are in controlled spaces
(participating hospitals) with backup power and designated
operators.

Most likely, other Administrations reject the "monkey see, monkey do" attitude that seems to propel this issue. Japan did it - why should we? It's the FCC's choice. which has been made clear over the years.

"W.O. Johnson" may be the only Coastie who knows that secret
information, because all the USCG communications folks that I have
dealt with in recent years, including watchstanders at the USCG
Communication Area Master Station - Pacific (CAMSPAC), have verified
(and in some cases lamented) that they no longer maintain any
capability to communicate with vessels at sea by CW nor do they
stand watch on 500 kHz. In a notable case after they stopped
standing watch, CAMSPAC called up Maritime Coast Station KPH (which
itself has been closed for 5 years now) and asked whether they could
come up on 500 kHz to read the CW traffic because CAMSPAC could
not. That info was relayed to me by the manager of KPH at the time.

>That may be so, and other posts indicate that CW is still used at sea.
>However, the ITU plan was to phase it out by 2000, and the international
>code test requirement for ship's radio operators is gone, as is the
>requirement for shore stations to listen for distress calls on 500 kHz CW.

AFAIK, no US coast station even offers CW traffic service nor has
operators qualified in Morse CW. This I know for a fact.

>evidenced by more logs being received - but only for CW contests.

Actually, as Dan pointed out, maritime radiotelegraph operation
using Morse ("CW" for short) is still used in some parts of the
world for routine messaging, but not for maritime distress and
safety purposes. There's no problem as long as the operator holds
the proper class of commercial license, the equipment meets the
standards of the ITU and the licensing Administration, and the
operator finds someone to communicate with - which will not include
commercial coast stations nor the USCG (and its equivalent) in the
major maritime countries of the world. Nothing prevents shipping
companies, even in the US, from establishing private coast stations
to communicate with their vessels by CW in the same manner as most
shipping companies have private coast stations for voice communications
("company frequencies") on HF SSB.

Interesting to see if the Philippines is a signatory on the Safety
Of Life At Sea (SOLAS) Convention which requires GMDSS capability on
vessels (over 300 gross tons) registered by its signatory members.

Also interesting to see if the USCG still has the authority to
prevent a foreign-flag vessel which is required to have GMDSS
equipment to sail from a US port if that vessel is not so equipped
and has a valid and current Safety Certificate. They used to have
that authority when MF CW was the required safety system.

Nah...the tests for amateur radio license should be based on what
the FCC thinks/demands hams have to know to do things with radio as
the FCC wants them to do.

If the FCC staff member responsible for that doesn't have such a
clue, send him/her back to stamping applications in, and get someone
who has a clue.

Or are we all retired by now?

If the Rule revision eases a burden, the FCC can make that revision directly by Order as long as the revision order articulates how the burden is eased.

A good example of that was when the wizards and scholars in the Private Radio Bureau decided that it was no longer necessary to have a specified station location in the Commission's records or on the amateur radio license. POOF ! It was done, even over the violent objections of the more perceptive members of the enforcement staff.

An even more egregious example of that was when the license requirement for Citizens Band operation was dropped. No one was asked. POOF ! Done.

>>Advanced, or Extra licenses will not - yet they oviously have a code element
>>embedded in them. There was LITTLE to no logic in the FCC's ruling.
>>
>>
>But those licenses (general, advanced & extra) required code faster than
>5WPM.

Exactly.

>To some brearucrat, faster code speed is not the same as 5WPM,
>and the new rules spelled out "5 WPM".

Actually, they spell out "Element 1" which IIRC is defined as "not less than 5
wpm".

>He may have thought that 13 or 20 was easier than 5? The guy
>was probably
>someone who usually did rules for broadcast radio or TV.....

Back when there was more than one code test, passing a faster test gave credit
for the lower speeds. IOW if someone walked in and took 20 wpm code as their
first element, they got credit for 5 and 13 wpm without actually taking those
slower tests.

Here's what I think FCC was thinking:

Before 1967, the Novice was a one-time license. If you did not upgrade after
the one year term, you were out of luck and off the air until you could pass
the Tech or General. A lot of newbies dropped out because of that rule. In 1967
the Novice was made a two-year license. In the early 1970s there were several
quick changes - first it became retakeable after a one-year off-the-air period,
then it became immediately retakeable, then it became 5 year renewable.

I think FCC wanted to give those dropouts a chance to get back in without
having to pass another code test, hence the original rule.

Then somebody noticed that if someone bypassed Novice and went straight to
Tech, they were out of luck. So the rule was changed to include Techs. But
since Tech has always been renewable, that rule seems a bit odd. Whole thing
may be academic soon anyway.

Remember the original restructuring NPRM and the contradictions in it? And how the FCC issued an "Errata" that simply made it more confusing?

Yes, Lennie, something is VERY "screwed up". A "man" of your alleged years, repeatedly antagonizing a group of people for whom you have obvious disdain, repeatedly lying in an archived forum..

"Screwed up" is an understatement, now that I think about it.

>Seems that all you can do is insult other people having opposite
>. opinions to yours.

To someone who keeps making indefensible allegations, I guess it appears that way. YMMV.

>The on-line "morgue" of the AP isn't complete and no trace of that
>. alleged story could be found on-line.

Gee, Your Putziness...I am (per your assertions) no where near teh electronics genius you profess to be, yet I found it.

Why is that?

>All anyone has to do is follow in your illustrious footsteps, oh Great
>. Warrior Leader (and veteran a "seven hostile actions"). Raise your
>. glorious Flag and bellow "Follow Me!" and all will join your crusade

Nope. All they ahve to do is read what YOU say to know what >>I<< say is true. Doesn't matter to me...BAD for you...

>> I bet somone does. And if they do, that will be one more test than YOU
>>have taken, Lennie.

No "lying" you poor obsessed, vindictive person.

You just cannot stand any opposing opinion to yours.

You must win at all costs...even if that means deliberate
personal insults thrown out in total disregard of any civil
propriety. See "rectum breath" as a recent example.

>>. Seems that all you can do is insult other people having opposite
>>. opinions to yours.
>
> To someone who keeps making indefensible allegations, I guess it appears

Poor thing, in addition to self-righteousness and delusions, Steamy
is now suffering from megalomania.

You need mental help, Steamy. Go get it from some medical
expert...the type who can sign his name "doctor" because he
graduated from medical school.

You can't take opposing opinion in any form without becoming
aggressively vindictive, insulting, and generally unpleasant.

That's enough for Steamy for the month of June...

But such amplifiers marketed (sold or otherwise transferred) by
non-amateurs to amateurs must have a grant of certification
(formerly known as type-acceptance) from the FCC.

See Sects. 2.815(c) and 97.315 of the Rules.

Above information may save your own a** when the FCC comes knocking
on your door after they bust the seller for selling to CBers (yes,
that's one of the few things that they still do, albeit not enough)
and go checking out the folks that the seller sold to.

The distress frequencies (upon which voice calls are made and
traffic is passed) remain 2182 kHz and VHF Channel 16. The
continuous monitoring requirement has shifted to DSC on 2187.5 kHz
and VHF Channel 70, but the 2182 "silent period" remains.

In all cases except in the Mediterranean (the so-called Area A1) the
primary distress call is made on INMARSAT, though, if the vessel has
it. The Marine Safety Agency responding (USCG in the US) will shift
the traffic to MF or VHF depending on the location. In the Med, the
primary call is on MF.

>It also seems that the VHF channels have been changed. Presumably they
>still use FM?

Yes, all VHF Marine channels are FM (5 kHz deviation).

>No "lying" you poor obsessed, vindictive person

I am neither poor, obsessed, nor vindictive, Lennie.

My bills are paid.

I do not go into newsgroups of activites of which I am not a participant
and tell those who ARE participants how to "do business".

And in order to be "vindictive", I must be vindicating something. I
don't. However judging by your incessant rants, copious mistruths and putrid
rhetoric, one must question YOUR "motives".

You are not here for "civil" debate.

>You just cannot stand any opposing opinion to yours.

Sure I can. I disagree with Bill Sohl, Cecil Moore, and a handfull of
others all the time. I even disagree with those whom I agree on some points,
ie Larry and Kim.

The difference is they know what is play rom serious, and to this date, I
cannot say any of them are overtly lying about anything.

On the otherhand, we've caught you in any number of mistruths, errors and
blatant lies.

Too bad for you, huh...?!?!

>You must win at all costs...even if that means deliberate
> personal insults thrown out in total disregard of any civil
> propriety. See "rectum breath" as a recent example.

Hmmmmmmmmm..."civil propriety"....Interesting term coming from you,
Lennie...the same guy who called me "Gunny" one week, then was calling me a
"jackbooted thug" the next.

>Poor baby. Only YOUR viewpoint is "good," all others are
> "indefensible positions," "lying," or "rectum breath."

Nope...Only those that are indefensible, lies or smell of one's rectum.

See: Leonard H Anderson.

>You need mental help, Steamy. GET it.

From who? Your correspondence course shrink wife???

>> Nope. All they have to do is read what YOU say to know what >>I<< say
>is
>>true. Doesn't matter to me...BAD for you...
>
> Poor thing, in addition to self-righteousness and delusions, Steamy
> is now suffering from megalomania.

I'd ask you how you got "meglomania" from taht, but I figger there's
already about 1536 unanswered questions in the que already. Best to let you
get on with those others.

>You need mental help, Steamy. Go get it from some medical
> expert...the type who can sign his name "doctor" because he
> graduated from medical school.

Sorry, Lennie...You suggest I get mental help then suggest I get it from
somone who went to medical school.

Again, your rush to be insulting and "score points" in your imaginary
"messaging points system" has allowed you to screw up again.

>You can't take opposing opinion in any form without becoming
> aggressively vindictive, insulting, and generally unpleasant.

I get that way dealing with antagonists, liars and social ner-do-wells.

That would be.......YOU.

>That's enough for Steamy for the month of June.

Sorry, Lennie. Twelve more days to go yet. Unless you are going into a
lock-down mental health program of your own? And I KNOW you weren't yet AGAIN
trying to moderate or control USENET content, like YOU accuse OTHERS of doing,
now were you...?!?!

Geritol time for Lennie.

2814. S25.5 proposal in Geneva

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-18 12:25:49 UTC
From: lk <lklose@net-link.net>
Message-ID: <vf0ml2ca5n3s4b@corp.supernews.com>
Source record: 68952

The ITU web site list ten proposals for rule S25.5. They are:

ARB mod (modify)
ASP sup (suppress, delete)
EENA noc (no change)
EUR mod
IAP sup
IND mod
KEN mod
TZA mod
UKR NOC (strongly support no change)
USA sup

The last proposal (USA) is the United States proposal,
which is to delete S25.5.

You must have a special account and password to view the
text of the proposal.

Can anyone provide addition information on the other
proposal?

> think you probably guessed that already.

From the perspective of the DX that problem is not all bad. In a
scenario where everybody can transcieve with everybody they would have
nowhere to hide and be able to work each other without getting pounded
by the hordes of Yanks calling them. Particularly given the usual weak
signals on 40. This could be a case of being careful about what they
ask for because they might get it.

When a nation relinquishes a small part of its soverignty to a treaty,
then breaks the treaty, they are re-asserting their soverignty.

Sure, Len. You're simply engaging in civil debate by hurling SATIRE.
Your conveniently snipped SATIRE has been seen by all. We're now aware
that your own militant, crackpot one-sided, my-view-is-the-only view is
the only one you consider.

> . Tell us, oh Glorious Ham Leader, is "rectum breath" NOT an
> . insult? :-)

I'd certainly have felt insulted if called "rectum breath", Len.
Do you consider any of the many names you've called Steve to be
insulting? I'm not insulted by your use of the term "Glorious Ham
Leader" though. I figure that its use by you is simply more evidence
that you don't know much about amateur radio.

> . Of course it isn't if uttered by an extra. The old Double Standard
> . at work!

Why no, Leonard. Here, I'll show you.

Steve, please stop insulting Leonard. He's only here to engage in civil
debate over the morse test and for the imposition of a minimum age in
amateur radio licensing.

> . Go back to reading your AARP bulletin, old man.

...and you may resume reading the consumer information provided on the
side of your box of prunes, even older man.

Uggg . . yeah, I never looked at it from that perspective, the fourth
harmonic falls right into the air band.

I rented some industrial space in which there was also an outfit which
fabricated huge sheet vinyl products like tarps and swimming pool
covers. The machinery of course included a row of monster 27 mHz. seam
welders. You'd have to have seen this junk to believe it. It was all
antique equipment plus he "improved" the cooling by yanking the covers
off the equipment which exposed the 4 kV wiring to his crew. A screen
room would have to have been maybe 150 feet long by 40 feet wide.
Forget that!

To really cork it the location is directly under the final approach to
one of the rwys into PHL maybe two miles off the threshhold.

I always wondered who would nab him first, the FCC or OSHA. But nope,
he moved about five years ago untouched and as far as I know he's
still at it.

Wow, no kidding! Were you surprised? Kind of like gamers getting
together and talking about games, or computer jocks talking about
computers or programming, or model plane builders talking about model
planes.

> Anyway, this type of person probably would enjoy the Ham culture.

> ---
> Most Hams I have met are anti-social. Anti-social former co-worker Ham,

> while others socialize.

What on earth do you mean by socializing or not socializing? All of
those things ARE socializing.

I'm getting the impression that by socializing, you are talking about
some hypothetical "party" where beautiful people who maybe are movie
stars, or perhaps CEO's and their lovely wives mingle and talk abour
their latest promotion, movie, or real estate deal while drinking the
latest trendy drink or bottled water. Then they move on to scintillating
discussions about the latest Survivor series.

Otherwise, what you are saying doesn't make any sense.

What on earth ARE you talking about? Do you think all hams are only
hams and do nothing else? Most everyone in here has other things that
they do. The ARS is a very enjoyable part of my life, but is by no means
the only part.

> produce a body.

I think in this case the issue was not what the emergency was at all.
(Although I did hear it wasn't much.) The controversy hinged on
the fact that OTHER ALTERNATE and ACCEPTABLE means
of communications were readily available, but the kid chose to
step in on the sheriff frequency. That, coupled with 'alleged' previous
issues between the kid and the sheriff department, probably had
more to do with the way it was handled than any attorney involvement.

_
LOL....still acting like a virtuous hammie while lying your collective
tail off and utilizing a throwaway AOL account to abuse terms of
services....."self-proclained king-of-freeband"? LOL..those words only
exist in your forges ("Respect for freebanders... 64.12.102.48") of
myself and others, of which Charles Johnson fell for hook line and
sinker and crossposted like a raving lunatic.......the late Dick
McCollum N0BK also pointed out that Lelnad C. Scott KC8LDO was forging
me (and others) in your hammie rooms....when you found you were unable
to debate intelligently (communication deficit) you expressed yourself

in the only manner you know,,,,,personal off-topic attacks and lies. I believe your precious but fictional "voobner" nailed it when he claimed: "If you got rid of me, you would still have Doug Adair, Dave Hall, Lelnad Scott, George Busch, and Sparky to deal with."

Indeed. These named hammies are indicative of all that is wrong with hammie radio today, illustrated by their numerous lost ISP's for violations of TOS.s. These are the type hammies that permanently stain hammie radio and mar it for those seeking betterment of the amateur hobby. You really need to get over yourself with your lies, obsessions and "Twisted" this and "twisted" that. The time you devote to myself and others that have you frustrated is telling of your agenda and mindset. Thank you for illustrating once again, what is fast becoming worldwide knowledge among the amateur community. Getting the word out concerning hammies that deliberately hamper efforts by the ARRL and others who work tirelessly and effortlessly to better the hobby is no longer a difficult task, thanks to posts such as yours and actions such as yours. I find it amusing you diseased few are licensed for communications, yet spend your time trolling in a cb forum illustrating the irony that you also suffer the greatest deficits where communication skills are required. Try not to muck your fellow hammies forum up too bad with your juvenile obsessive off-topic rants, personal shortcomings and inadequacies concerning those that demonstrate your incompetence and laugh at your impotence on a continued and regular basis.

> . crackpots in this groupie fest.

Satire? Nobody else thought it was funny.

When someone satirized or parodied you, Len, you got really upset.
Double standard...
> .
> . Tell us, oh Glorious Ham Leader, is "rectum breath" NOT an
> . insult? :-)

It's an insult to rectums.
> .
> . Of course it isn't if uttered by an extra.

I just wrote that it is an insult.

> . The old Double Standard at work!

Your double standard is quite evident, Len.
> .
> . Go back to reading your AARP bulletin, old man.

Typical ad hominem from you, Len.

Here's a tip, Len: Try being positive in your postings here, instead
of negative. You project an extremely negative persona and energy. The
headshrinkers have a term for it: 'toxic personality'. You're always
talking about what's wrong, what has to be eliminated, how bad others
are, how awful Morse code and its tests are, making false accusations
of fraud, getting all worked up over typos, defending the "honor" of
worthless, thieving, lying long-dead corporate robber-barons, name

calling, insulting, ridiculing, making bad "jokes" that nobody finds funny, yada, yada, yada.

What a sourpuss! The negative kharma you've acquired must be staggering.

You never talk about how much FUN amateur radio is, how great a lot of hams are as people, how many accomplishments hams have made...

oh wait - you're Not Involved with amateur radio in any meaningful way.

2824. Re: Respect For Freebanders

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-18 16:11:32 UTC

Freebanders have a strong need to be noticed - trolling the Ham newsgroups and generating lots of noise provides the same thrill that drives them to exhibit similar behavior on the Ham bands. They know that they are lawbreakers - that is what makes it fun!

These guys have a pathological need to rebel against the establishment - and they need to tell the world about it! "Look at me!", they are yelling - and they need us to listen. If they wanted to be Hams, they would be. They have the technical ability to operate (and even modify) radio equipment, and the inclination to learn how - just like us. For them, however, it's much more fun to annoy others than to join a community. And, just like radio, the Internet provides a place to hide while committing these 'brave' acts of defiance and individualism - have you ever heard one of these guys articulating their views at your local club, or a Hamfest? That would require a journey out of the comfort of the darkness that these folks need to empower them. As well, the possibility of being held accountable for the laws that they wilfully violate is too much for these brave souls to face - I suspect that there are few Nelson Mandelas in the Freebander ranks.

As Hams, the wisest thing that we can do is to not get suckered into flame wars and discussions with these folks - this simply encourages similar behaviour in future. Ignoring them on the newsgroups denies the gratification which they crave. Do the same on the radio - follow standard procedure for handling QRM. When we acknowledge the existence of someone creating QRM, we are creating QRM ourselves - and we encourage the offender to do it again, as the desited result was achieved. When we ignore those offending transmissions, we cause the offender to question whether his equipment is working - did his signal get out there? Did it interfere? Did it disrupt communications? DID ANYONE HEAR ME ?? Maybe - but doubt has been created, the conversation that was supposed to be interrupted continued as if the offender did not exist - and the fun was removed from the act. We can do that here on the newsgroups too by not responding to posts from these folks. Like the tree that falls in the woods with no one around (and hence, makes no sound) - if we all ignore them, then they don't exist. They are there because we acknowledge them, plain and simple. All parasites die when denied a host.

Ignore the QRM, and continue to report all offences to the regulatory and law enforcement authorities. Log them, tape record them, triangulate / locate them, identify them - but do it quietly, and deny them the ear that they so desperately need.

We should be part of the solution, not the problem - that's what being a Ham is all about!

Then you also need to go after all the 11 meter DX groups on Yahoo.

Wouldn't it be easier to elmer some of them and let them tell their friends?

Why stop at Yahoo, Scott. What about going after ALL the 11-meter DX groups
on the ENTIRE internet?

> Wouldn't it be easier to elmer some of them and let them tell their
friends?

That'd require the patience and temperment to not let the ones that don't
want to be helped dissuade one from reaching those who are but a helpful
nudge in the right direction away from amateur radio. Historically, the
"damn 'em all" mind-set has always been easier. 'Sides, you don't know any
ex-11-meter DXers that subsequently became law abiding hams, do you? ;-)

Stay on topic, Dick.

Why do you believe that people who are against an outdated,
unnecessary, and superfluous code exam against all exams?

Brian

Like having to beam across Japan to work Europe from Guam. I would
have to work hundreds of JA's hoping the band didn't close before I
got thru them all.

Or I would call Europe only, and the JA's were very respectful and
polite. No problems. When I would slip and leave Europe out of the
CQ, there the JAs were again. Again, no problem.

If only the Yanks were as well behaved, your premonition of DX having
to hide...

"11 meter DXers"? Call them by their real name. FREEBANDERS. i.e.
outlaws.

> If they ever do away with code, I can pull the 2950 out of hiding!!!
>
> I hadn't used any extra channels is a long time.

Sigh. "Extra channels"? Call them by their real name: ILLEGAL
FREQUENCIES.

>My Yaesu HT was

You only operate "AM" CB ILLEGALLY "when needed". How about that. Jeez,
that's quite a triumph. No wonder you won't post your callsign.

> 26 years in radio, including CB, SWL, scanners, and now amateur.
>
> Scott, KB3xxx

Sad that a guy with that much experience and potential won't give up his
illegal CB behavior -- to the point where he's ashamed to post his
amateur callsign.

>Then you also need to go after all the 11 meter DX groups on Yahoo.

Scott, first of all, freebanding is ILLEGAL no matter if you call it "11 meter DX" or "upper channels" or "international DX" or whatever. Secondly, the sheer number of people breaking a law doesn't make it right, i.e. "mob rule" over the airwaves.

>Wouldn't it be easier to elmer some of them and let them tell their friends?

Yes, elmer them, BUT elmer them to show respect for the law.

And talk about lack of respect.....here's a piece written by "twistedhed" glorifying the joys of "freebanding". It was at http://sporadic1.tripod.com/page7.html. This url has disappeared, I don't know why, maybe they were ashamed of it. Here is the original article from SPORADIC WAVES which may give you some insight into what we freebanders concerns are:

==========

by Twistedhed@webtv.net

DX Gone Crazy? International DX on the eleven meter and free-band is there for the taking just about everyday on sideband. AM is also giving up rare contacts. But one of the better known frequencies for international DX contacts, 27.555 USB, once a jewel of pleasant listening and international contacts, has unfortunately deteriorated rapidly over the last few months, morphing itself into a vile cesspool, spewing forth all it's bile and waste, due to a small, intellectually-challenged, rapid group of angry, self-loathing and pathetic operators who have taken it upon themselves to take up a permanent-like residential status there, and in the process, completely abdicated any civil, polite conversation.

27.555 has long been an international world wide contact frequency. Standard protocol has always dictated one makes a contact and QSY's to another frequency for their conversation, thus leaving the call frequency open at all times for contacts.

This small but nefarious group is attempting to jam, interfere, and prevent any DX contacts from being made on frequency.

In case you haven't listened in on 555 as of late, the frequency has literally become a key down fest with language that one would be embarrassed to hear in the company of children, while only those blowing ridiculous amounts of power are being heard. Some incredibly rare and difficult DX contacts have effectively been nullified because so many operators are choosing to fight fire with fire....in other words, many are pumping up their wattage rather than surrender the frequency.

While I can somewhat empathize with the operators who are attempting to defend this bit of DX space, especially the ones who are located outside of the U.S. and are permitted to transmit there,

I can't seem to shake the old adage that keeps playing in my mind, "If you are not part of the solution, you are part of the problem."

Power wars are not going to solve anything. The frequency has so much trash on it that it is already beginning to sound like the frequencies many have attempted to elude.

While 27.555 used to be an everyday stop during my channel surfing activities, it no longer is. Oh, I occasionally flip there in hopes that the channel may somehow have become civilized again, but as soon as I hear the hate and discontent, I no longer have the patience to listen for a far off exotic station just to have them get keyed on as they give the frequency they are QSYing to. It is easier to change the frequency.

Other operators around the world are also gravitating to nearby and other frequencies. In the last 2 weeks, I have heard France, Italy, Germany, the U.K., and Holland comment on what a sad state 27.555 has become due to the selfish and inconsiderate actions of a few.

27.415 to 27.595 is yielding great DX. It appears that operators are still making their contacts, they are just working a little harder to get them.

Instead of relying strictly on 555, many long time ops who USED to utilize that frequency exclusively are found hovering close by.

Since January, I have counted no less than 30 countries on frequencies close to 555. While 38 LSB(27.385) continues to be a productive DX channel, it mirrors 555 in language, harassment and abuse. Not surprisingly, the perpetrators on 38 claim the same geographical locale as the offenders on 555, which is more than likely true, as I noticed that when the skip conditions begin to fade from the blathering idiots on 555, the same occurs on 38 with said offenders. I can say one thing with absolute certainty, the offending signals are coming from the southwest U.S.

Of all the DX and countries I have ever heard, I find myself embarrassed for our own operators here in the states.

The high profile spectrum splatterers usually get their clue, one way or another.

Unfortunately, for many fine operators and listeners it doesn't come soon enough. Rather than retaliate with gobs of power, it is simply easier to find another frequency until the problem rights itself.

While some may continue to pull out the A/C mauls, this is actually compounding the problem. If no one would react to these types and totally ignore them they would long tire of talking to themselves. But I guess that is just the optimist in me.

The flames continue to be fanned, albeit not always intentionally, by ops who feel it is their right to "give back what is being doled out."

There are no easy answers. As stated priorly, there are many other frequencies yielding great DX. Here are a few heard as of late. A good hint to use while searching for long distance DX is to move s-l-o-w-l-y and if possible, in 5 kHz steps. If you believe the solar scientists,

the current cycle is now projected to peak around May or June. If this prediction proves accurate, this should give us some more time to enjoy the incredible skip propagation that has been the norm as of late.

I continue to receive e-mail concerning the comments I made about some of the larger radio distribution companies and the still-unfounded-rumors of a litany of back orders. Judging by some of the responses I received, it is inevitable that there is a basis of truth to the allegations concerning a connection between easily modifieable 10 meter radios and companies not having them in stock.

However, it appears that this is confined to just one or two companies at this time.

Keep sending me your personal experiences about backorders. So far, they range from the slight inconveniences to the outrageous(3 months or more), I will compile all I receive in an honest effort to find out if these experiences are due to increased pressure from the Feds or just attributed to shoddy customer service.

Feel free to share your thoughts with me on this or an other subject you my wish. If you wish a reply, please provide a valid e-mail address. 3s from Keyholder's Korner,

Twistedhed@webtv.net

No need to hide it, Scott. Use it to listen all you want. When you nail the code, (...& you WILL, trust me!) gimme a call on 28.4440 MHz around dusk. Can't transmit on 11m though. Trust me again, the risk's just not worth it.

> I hadn't used any extra channels is a long time.

Relegate it to listening only now.

<snip>

> Except for the TS-250 on my PC-122 in the
> mobile, I _AM_ legal. I only use power when needed. Otherwise, I'm
barefoot.

Be warned, many view it as "in for a penny, in for a pound" re. ANY illegal activities. So I really wouldn't advertise the use of the TS-250 on 11m. However, you can use that TS-250 on 10m without much hassle after you pass Element 1. (Which you WILL.) Somewhat will point out why you can't, I'm sure. But we ARE talking realistically, yes?

A word about legality. As with ALL laws, there's IS a point of balance between true disregard for others in the form of harmful lawlessness in society and the 100% pure perfect law abiding citizen. This requires some common sense. Many throw this common sense approach aside when it gets in the way of being able to label an individual (or group) as <a> criminal. Let's face it, the stigma of being called a criminal implies that you are of bad character and/or poor moral fiber, (Or is that fibre?) right? Why do I bring this up? To caution you that it is truly in your best interest to fly straight and narrow now that you have chosen to join the amateur radio community. I hope you take that in the best of spirit as this is how I mean it. You wouldn't regard a jaywalker or someone who occassionally drives at 60 m.p.h. on a 55 m.p.h. hwy. with the same regard as a burglar or a rapist, would you? Neither do I. Well, be warned that there WILL be those who will equate ANY 11m associated transgressions the same as if you dumped a kilowatt of voice on 28.085 MHz. Lest I come off as preachy of holier than thou, what violations DON'T get my tail feathers ruffled? I really don't worry about folks working DX on the legal frequencies at legal power levels. The antenna height restrictions don't bug me to much either. Say as a ham,

you have a 200 ft. tower and run your CB through the tuner to that monster tri-bander on top, bully for you. Mind you, I don't do either of these...hence no risk to me. However, there are some for which this type of nitpicking is a sub-hobby unto itself. Hey remember, the addition of an amplified mic can be construed as a modification to the transmitter circuit of a type-accepted CB and thus, be considered illegal. Common sense, however, dictates otherwise.

As for me, I just want to extend you a hearty "welcome to amateur rdio," Scott. I'm sure you'll have a blast. Take care and hope to work you on 10m soon. :-)

> 26 years in radio, including CB, SWL, scanners, and now amateur.

Two thumbs up!

Exhibit A re. my last post, Scott. Tune o ch. 38 LSB on any given evening and you'll rarely hear any two stations from the same state. (Except for Texas.) Ch. 38 is 27.385 MHz and does fall within 11-meters, hence 11-meter DXers. Illegal, yes..."freebanders," no.

No, that's not it at all. Hams should not hesitate to elmer a freebander or a CB outlaw. What is past is forgiven, get your ticket, go and sin no more, etc. But to say that this person's current (or continuing) "freeband" violations are trivial and acceptable reinforces disrespect for the FCC and FCC rules --- a disrespect he will carry over to his ham career.

The FCC would usually get into it after the FAA reported harmful IX.
This is one of the few items that the local office District Director
has absolute authority to issue a Cease and Desist Order without
futzing around. Failure to observe same brings the Marshals. We
issued a bunch of Orders in the late 60s but never had to go the
Marshal route.

In the era when one could get a specific call issued if one had the
right connections (over 40 years ago), a then-buddy of mine, SDimon
Holzman, a well-placed design engineer for a major (non-amateur)
antenna manufacturer, got the former callsign of the editor of CQ
Magazine when the latter used -his- juice to get a snazzy call.

After going on the air with it and being called a "bootlegger" with
practically every attempt at a QSO, Sy turned it back in and got a
plain WA2 2x3 call.....

George, you do not speak for everybody nor can you claim to have experienced
every ham's reaction. Also, by selecting only this paragraph, the message
appears a tad out of context.

> Hams should not hesitate to elmer a freebander
> or a CB outlaw. What is past is forgiven, get your ticket, go and sin no
> more, etc.

Agreed.

> But to say that this person's current (or continuing)
> "freeband" violations

Stop right there, George. Go back and reread the ENTIRE post and you'll see
that "freebanding" is in no way "trivialized." I personally DO trivialize
DXing on the legal 40 @ 12 watts P.E.P. and the use of one's ham band
antenna @ 200 ft. for CB. No sweat, that's just MHO and I'm man enough to
stand behind it. (Out in the open, I might add.)

> are trivial and acceptable reinforces disrespect
> for the FCC and FCC rules --- a disrespect he will carry over to his ham
> career.

Answered above. BTW, respect is something that's earned...not granted. While I may repect the FCC, I don't necessarily have to agree with every single one of their rules...despite following said rules. Hence, not getting my tail feathers ruffled.

Using a very clean 2 pill on sideband from the mobile, when needed, is
very different then running many Kilos in class C on AM all the time.

I had always told folks NOT to run heat in the house. You're a sitting
duck for your neighbor's complaints.

oh mama mia.....

> Have fun.

That company with the heat sealers I mentioned earlier eventually junked it and got more modern equipment. I somehow wound up with the spare tubes - an 833 and two 866As. My RCA Transmitting Tube Manual has a schematic in the back....

Killing the harmonics is basically a matter of tank circuit Q and class of operation. Those ancient sealers were usually extreme Class-C, in an effort to develop high efficiency. But a nice MOPA design with a Class AB final could do the job, too....

Gee I love how you view FCC regs governing the use of the RF spectrum as
suggestions you can or can't follow depending on what rationalization
you come up with.

I'm not ashamed to post my call. I don't do it because of the bunch
of internet stalkers on rec.radio.cb, just trying too hard to find
a shred of info about me. They claim to know, but have never produced
any info when asked to.

[repost, in case you missed these words from me]
mrcoily, I don't use AM mode. Everybody [here] has their limiter clipped and I
can't stand to listen to them.

Using a very clean 2 pill on sideband from the mobile, when needed, is
very different then running many Kilos in class C on AM all the time.

I had always told folks NOT to run heat in the house. You're a sitting
duck for your neighbor's complaints.

What "game?"

Ms. Flint is not telling us a situation that is prima facie clear. The fact that the FCC didn't even change form 610 until November 1993 to include a "Technician with HF" license class IS prima facie evidence that there was NO SUCH THING during 1992 when Ms. Flint claimed she had one - and so is the June 1994 database change as well. Excuse me, but without evidence to the contrary, the evidence I have in hand says that I should not believe her claim - that she had a license that said "Technician Plus" issued during 1992.

I'm not absolutely saying that she is a liar either. She hasn't demonstrated her claim - but I have demonstrated evidence that shows the claim may be false.

Depends on the frequency, Scott. If it's on 10m, fine. Run it on 11m and you risk a multi-kilobuck NAL. Excessive power is not something I trivialize. Personally, I'd lose the TS-250 or run it on 10m.

> I had always told folks NOT to run heat in the house. You're a sitting
> duck for your neighbor's complaints.

Knock out that code and add Element 3 and you can run a full gallon and a half of clean "heat" from the house and you probably won't get any complaints running an amp that employs a properly designed low pass filter. I'd be happy to send you my ARRL Morse code CD's. It really is not hard at all.

This is confusing. What's the poiint in calling 'Mayday' on 2.182 or
156.800 if everyone is listening on 2.1875 and 156.525? What am I missing
here?

It's "no different" only if the teacher and the school had made it clear that
students taking the test were NOT to discuss the actual test with others.
>
>> Those exams were not public information, and the examinees were not

True - and divulging said information was against the rules. As I recall the
old exams, when someone signed the 610 as part of applying for the license,
they agreed to abide by ALL of the rules and instructions involving the exams.
>
>> or to tell

What's the other perspective, Bill? That it's OK to violate the exam rules and procedures?

How about this scenario:

Back in those days, all Novice and Tech exams were done "by mail", using a single volunteer examiner. Would it have been OK for a volunteer examiner to make copies of the exams he/she proctored? How about distributing those copies to prospective hams as "study guides"?

Why or why not?

Oh, please. Far be it from me to stick up for one of the rrap ct
loonies, but the level of "demonstrated evidence" for _anything_ around here
is pathetic. One supposed 'net expert says I'm posting anonymously and Dick
Carrol used his powers of deduction to determine I'm a "phony" veteran based

on his (lack of) knowledge regarding military rations and satellite technology.
On top of that, the lot of ya get anal if somebody doesn't use his callsign in his postings.
People here have serious issues, and they ain't to do with ham radio, that's for sure.

Nonsense. You obviously didn't think this through before typing it. They
will still be able to operate below 7150 without me being able to call
them on frequency. As opposed to now, when they can only do that below
7100.

Two are "noc" no change, i.e. S25.5 remains the same.
Three are "sup" suppress, i.e. S25.5 is deleted.
It would be interesting to known what was in the five "mod" modifications.

UKR probably stand for Ukrania (russia), who we know strongly opposes
the supression of S25.5. Leading manufacture of vaccum tubes supports
Morse code exams. No suprise there. :-) Who is EENA?

Back in 1975 or so I played with CB radio. Had various "QSOs" with
various people
around town. No real DX though. Didn't have an amp though, just a type
accepted CB set. Then decided
to get the ham license and the CB ended up in the closet. Got my
current callsign
WA2ISE in Oct 76, took the tech test in NYC that summer. I had to send
code in
that test.....

Well my info sez:
"In 1991, no-code licenses -- and the No-Code Technician is born.
Technicians with code requirements are now Technician Plus. Since existing
Techs had Novice HF privileges and new Techs would have only VHF/UHF,
another semi license class, the Technician Plus, was created. Existing
Technicians, and those who passed the 5 wpm code test, became Technician
Plus class."

But durned if I can find it on the FCC or ARRL site -- maybe someone has a
URL

Everyone knows 11 meter amps are illegal to sell and use on CB. That doesnt leave you with much of a comeback, so I guess you must attack Stewart now.

Pretty weak, Scott.

Hey guys-- to quote a famous wordsmith, "It ain't over till it's over". And to add Phil's observation on top of that, it may not be over even then.

It's entirely possible that S25 won't be suppressed. Even if it isn't that doesn't mean there will ever be much of a code test again for an HF ham radio license. FCC could dilute the test so much that it would be completely meaningless, as opposed to almost, as it now is.and it wouldn't surprise me at all if they did that, should S25 survive this round.

Actually, Dee, there is. The simple fact that you got an Extra ticket under
the old scheme where you had to pass a 20WPM code test is enough for some
people. It's a sad situation, but that's about it.
It may not be over in our lifetimes, something like the Civil War.

>156.800 if everyone is listening on 2.1875 and 156.525? What am I missing
>here?

Ships still have to kep a speaker watch, listening on 2182 and
Channel 16 for voice calls. The DSC takes the place of the
auto-alarm in the older systems. One uses the auto-alarm feature on
the MF or VHF radio to alert on 2187.5 and Channel 70, and the
controlling station (coast statsion or USCG) can alert the situation
by DSC.

In the CW syustem, the rationale was that surrounding vessels would
pick up the distress call and go to the aid. In the GMDSS system,
the rationale is that the Maritime Safety Agency responsible for
that portion of the ocean would be the primary "listener" so the
distress calls are made by INMARSAT or HF is the ship does not have
INMARSAT working for some reason. 2 MHz and VHF are used for
relatively close-in distress traffic more than the actual initial
distress call.

Remember that this system is for large ocean-going vessels who
have the obligation to carry the modern equipment necessary. If the
country of registry is on the ball, the ships will have the gear or
they won't sail.

From: k4yz@aol.com (Steve Robeson K4CAP)

>Most people suffer some form of mental health abberation usually do deny
>it, or actually assert "pride" in thier illness.

Perhaps it is his beliefs, not an illness. Still those beliefs are anti-social
in <American> society.

>Take Lennie and Brain for
>example.

You just make personal attacks to those that disagree with you.

>Talking, regardless of the content of the conversation, IS "socializing".

Its fulfillment of <Ham> dharma (duty). Further support of the belief is done
through contests, where one "works" the <required> bands. Morse code is another
favorable point. One does disservice by operating for any other goals- for
example 10-10 numbers.

>However, I don't think one has to give up
>>everything else for the Ham activities. There was no need for the
>compromise.

Hams are not allowed to participate in non-radio activities. That's the
compromise. The only exception is eating. Eating alot is tradition.

Its an unwritten set of traditions. Its a "requirement" since most Hams don't
deviate from it. Neither is any participant allowed to deviate from it - Its
how the events are organized. Once you are at the event, you have no choice but
to do what's scheduled at that event. Such events make one wait three hours for
a Wuoff Hong ceremony, for example. Fun is not allowed. This must be true at
all such Ham events. That's the standard compromise.

From: Mike Coslo mjc5

>> Hamfests, Field Day, Wouff Hong ceremony at midnight, random Hams
>contesting
>> while others socialize.

>What on earth do you mean by socializing or not socializing? All of
>those things ARE socializing.

No, its group supported anti-social activity. What else would you call fishing
for random contacts on the radio? It quenches the more base, vile, and outright
pathetic.

Disclaimer: I don't mean ALL Hams or Ham-radio activity is anti-social - just most.

>I'm getting the impression that by socializing, you are talking about
>some hypothetical "party" where beautiful people who maybe are movie
>stars, or perhaps CEO's and their lovely wives mingle and talk abour
>their latest promotion, movie, or real estate deal while drinking the
>latest trendy drink or bottled water.

The example you gave is close to what I mean about anti-social activity. Most Hams aren't "cool".

Dick,

I still am curious to find out, if there were any SPECIFIC exclusions to
Part 97.401, 97.403 or 97.405?? I have not been privy to the actual release
issued by the F.C.C. regarding the new band allocations.

Are those parts of Part 97 specifically listed as not applicable or is that
just certain people "reading into it" to serve their own agenda?

Inquiring minds want to know,

That brings up a completely different point of contention for me! Chat programs or other programs (using PC's on the air) is where we have definitely fallen behind as a communications field/hobby.

There are so many services that have dwarfed amateur radio at this point, in regards to digital technology that makes us look like we are in the stone ages. PSK31 is nice, but through a variety of reasons it is primarily only used on HF. It could be utilized on 6 meters where there is some equipment out there for ssb/cw. Technically speaking, it could also be used on FM, as discussed in an article in QST (in a 2000 or 2001 edition, I will look for it again....) for 2 meters or 70cm. There was a experiment done in this article where it showed promise on FM for locally based communications.

As far as packet, that has fallen so far behind, that it is a serious shame. Most of the programs are old, crappy DOS based programs, (am unaware of any Windows based programs) and with incredibly slow transmission speeds and limited file sharing capability, I am surprised it hasn't died out completely.

Other modes of digital communcations, which are in the most basic sense, chat/contact/QSO related, are fine for jsut that, but overall we have fallen behind the mark. Currently there are some cities fairly close to me that have wide-area-internet-service that covers a 20-30 mile radius with speeds of over 20kps, (considering most dialups get 2kps-6kps)
or more and the person can be almost anywhere with that radius and connect. I am not saying we should provide internet access, for those that want to read into that, but can you imagine working a disaster situation, where you have say for instance a dozen different operators able to send digital pics or even streaming video (to a point) possibly even simultaneous to net control or EOC's? Current packet speeds are not worth bothering for regular use, and limited message capability is another issue.

Look at what is commonly used with most law enforcement MDT's, which basically were spawned in part from ham radio packet radio. The are not perfect yet, but the capabilities are phenomenal compared to existing packet capabilities.

I know this is a little different than the intention of the thread, but I think we really need to look at our digital capabilities and see what we could do, work on getting those limitations that we have lifted and designing new and better ways that may make us the envy of other services, and making the technology so good that it may be emulated as other things amateur radio have been in the past such as cellphone technology, mobile data communicators as well as quite a few other technologies the general public now enjoys thanks to ham radio.

OK Say you are on a small privately owned vessel, i.e. not compulsory equipped and no INMARSAT (not mine, but a friend I have in mind, I don't have a boat). God forbid he needs to call Mayday, 2.182 at sea and 156.800 inland, or 2.1875/156.525? He probably already knows the answer, but I don't and I am curious.

So what do they gain by being able to run ssb up to 7200 or even 7300?
Besides logs full of Yank contacts. A lousy 50 kHz. more space which
could go away when we get to operate ssb down to 7100. Beyond that I
don't know why you have such a big problem with working split in the
first place. The dx phone contesters routinely work dozens upon dozens
dx stations inside 48 hours of operating time. I sure have my piles of
40m ssb dxcc cards. Ditto 75M.

Not nonsense at all, Alun, it's what would happen.

>You obviously didn't think this through before typing it.

You missed a key point. W3RV wrote:

"In a scenario where everybody can transcieve with everybody.."

>They
>will still be able to operate below 7150 without me being able to call
>them on frequency.

That's not the scenario W3RV is describing. If they can go below 7150 and you
can't, then everybody can't transceive with everybody.

>As opposed to now, when they can only do that below 7100.

Main point is that if all regions have 7000-7200 or 7000-7300, there will be
lots of places where you can work 'phone DX non-split - if that's what the DX
wants to do. If the US phone band stops at 7150, the DX will still be able to
operate split from outside the US phone band, or transceive completley outside

the US phone band, without moving below 7100 or even 7050.

You give the FCC bureauheads credit for more intelligence than they have. Consider that it is a 10 (20?)kHz wide band of space. Put appropriate RF anywhere, and only in, that band. Let the FCC fret as to why they can't understand some of the chirps, sputs and duck talk that they hear when they monitor it.

The writers probably had the CB paradigm of upper/lower, upper-upper/lower/lower in mind when they wrote it, implying 4 channels within a 10 or 12 kHz total band width. We should presume at least this.
We might also argue that really a 20 kHz band is a fair assignment pending interference free software and hardware implementations. We should then lead the way in the new millennium spectrum utilization protocols.

Phil Kane wrote:

> I personally like the top-end headroom that 1.5 gives, because
> the voice can and does have components between 2.8 and 3 kHz
> whereas very little is found below 200 Hz.

I have out a lot of thought into this (speech intelligibility vs audio frequencies). So much so that I limit the low frequency audio in all my household devices such as TV and radio audio. The brain requires little or no audio below about 300 Hz. That is where the voice fundamental is located (100=basso, 300=soprano). The vowels and consonant are all at 500 and above. The energy up to 10 kHz is "useful", but not mandatory.

> What does the Bell standards say?

Ma Bell determined generations ago that up less than 2,000 is bad, to 2500Hz is vital, 3000 is nice, and beyond 3000 as not price effective (but sure sounds pretty). On the low end, "Naturalness" ("nice") required 200. I say that the audio below 500 is not worth the bandwidth it devours.

An article by Kryter in the 1950's declared that if you wanted to do speech with the absolute MINIMUM band, a 500Hz wide band from 750-1250 Hz was appropriate. If you decided at devote 1 kHz of spectrum to the task, then two bands, one from 250-750 and one from 1250 to 1750 would do. If three 500 Hz bands, then add a third 500 as from 2250 to 2750.

> What is the expected cutoff of most if not all TX baseband
> filters?

Probably the Ma Bell band of 200-3000. The only change I suggest is that we raise the bottom to 500Hz.

It is reasonable to apply a 1400 Hz wide 2nd IF or post-IF filter and slide it around the audio spectrum. I suspect that centering it at 1200+-200 Hz will give the best result.

At one point in the 1960's (I was K3IQU then), I had built a crystal lattice SSB filter with its two resonant peaks 1 kHz apart, using it according to Kryter's 500&1500 rue to some success. Today, I would probably place the same two peaks at 700&1700 Hz.

I don't have any "ham duty", Vipul. I wasn't obligated to obtain an amateur license. When I obtained a license, I wasn't obligated to do anything at all with it.

> Further support of the belief is done
> through contests, where one "works" the <required> bands.

One isn't obligated to operate in contests but if I decide to enter a contest, I'd be foolish not to operate in the "required" bands.

> Morse code is another
> favorable point.

Yes, it is, isn't it?

> One does disservice by operating for any other goals- for
> example 10-10 numbers.

You don't have it quite right. One does disservice by stopping to exchange 10-10 numbers in the middle of operating in a DX contest or in exchanging 10-10 numbers in the middle of participation in a traffic net.

> >However, I don't think one has to give up
> >>everything else for the Ham activities. There was no need for the
> >compromise.
>
> Hams are not allowed to participate in non-radio activities. That's the
> compromise.

I don't know where you gained your knowledge of amateur radio, Vipul, but that's one strange outlook you've developed.

> The only exception is eating. Eating alot is tradition.

...and I'm proud to say that I've been eating for 54 years. The tradition is a strong one in my family. My parents both ate and their parents ate too. We trace out eating traditions back at least fifteen generations.

> Its an unwritten set of traditions.

That's quite an understatement. It would appear that you've made them up.

> Its a "requirement" since most Hams don't
> deviate from it.

What's a requirement, Vipul--eating, not exchanging 10-10 numbers, not taking part in things which don't involve amateur radio?

> Neither is any participant allowed to deviate from it - Its
> how the events are organized. Once you are at the event, you have no choice but
> to do what's scheduled at that event.

That's pretty much right. They don't let you do the egg-in-a-spoon race during the three-legged race.

> Such events make one wait three hours for
> a Wuoff Hong ceremony, for example.

Nobody made me wait for the *Wouff Hong* ceremony. I understood that it would take place at midnight. I was free to do other things before the ceremony. I was also free not to participate at all.

> Fun is not allowed.

One would first have to be capable of recognizing fun when it is encountered.

> This must be true at
> all such Ham events. That's the standard compromise.

I'm sure that with your limited experience, that is how it appears to you.

Hey Robert! Do you make a habit of searching really hard for something
to argue about? No kidding that I can search out and find out who you
are? Sheesh, I'm getting an education here.

Fact is, you are posting anonymously. If I wanted to find out who you
were, I would have to work at it. And since your not being libelous, I'm
not going to.

Other people on the group don't have a problem with their names:

Dick Carrol, Steve Robinson, Jim Miccolis, etc. Even Lenover21 posts
with his name in the message. Brian Burke puts his name in his messages.
Even Kim of the infamous callsign can be easily ID'ed. THAT is what
we're talking about.

Just like sending a opinion to the newspaper. If you aren't ID'ed, your
opinion usually isn't accepted.

> and Dick
> Carrol used his powers of deduction to determine I'm a "phony" veteran based

There's equipment readily available for doing cw and ssb up through 47GHz.
Joe Taylor's WSJT software has largely usurped psk31's effectiveness for
narrow-band, truly weak-signal DX communications, whether tropo, EME or meteor
scatter.

the
> audio below 500 is not worth the bandwidth it devours.

For years, any device that was approved to be connected to the
phone (most notably modems) had to have NO SIGNIFICANT
ENERGY in the area 2500hz and up.

The reason for this is that the trunk disconnect signal is at 2600. You
could inadvertantly disconnect long distance calls. (Heh heh...)

2600 is the magical number here. NOTHING should be there.

2600 is the name of an underground (well, above ground now) magazine
for phone phreaks.

2600 is also refered to as the 'Captain Crunch' signal or tone, due to
the fact that years ago Captain Crunch cerail had this whistle that
really pissed off the phone company.

You do NOT need ANYTHING close to or above 2600.

Sure, it's not hi fi. But we're talking PHONE quality here...

Mike

We run chat over NET/ROM here, and could run any of the
tcp/ip based chats as well ... but there is near zero interest.

90% of the users are "stuck" in the 1984 world ... they use some
VT100 emulator program to read and send messages at 1200 baud.

The other 10% use 9600 or 19200 links, run IP as well as AX.25,
and are starting to use 13 cm links (811b) that support both IP
and AX.25. The big question is how to convince that first 90% that
faster links make more interesting applications possible :-)

Problem is, FCC seems to think all that regulatory stuff has to be
there. Since a licensee is responsible for adherence to the rules, the
exams are full of questions about those rules. FCC is satisfied with
questions that require that you know that 50-54 MHz is a ham band. I
don't think they'd be satisfied if the exams said "look it up".

There's a bunch of historical reasons, too. Reading the old License
Manual study guides from decades ago, it's interesting to note how
many questions there are on specific topics like band edges, power
supply filters and harmonic reduction, and how little there is on
other areas like receivers. The obvious reason is that FCC focused the
exams on the areas where hams had problems.

Also, once upon a time, FCC issued licenses in another service with no
exam at all. All a licensee had to do was sign a form certifying that
they had read and understood the rules for that radio service, and
would abide by them. The reality was somewhat different....

> But there's no practical test of any _other_ operating skill.

Maybe there should be!

However, note that most would-be hams already know how to understand
the spoken word and how to read. (I don't think a totally illiterate
person can be licensed in the USA). The Morse test is a basic skills
test, akin to being able to understand 41 words in a new language when
spoken slowly and clearly, or being able to read at the first-grade
level.

> How

I'll play devil's advocate on this one. Use a common anticodetest
argument against the phonetic alphabet test

If someone doesn't intend to operate 'phone, why require that they
learn the phonetic alphabet? And which one is THE correct one? Use of
any particular phonetics is not required by the regs, so why REQUIRE
that hams learn Alfa, Bravo, Charlie....?

Besides, it should be a spoken test, because the skill is to be able
to say the phonetics, not write them.

See?

Not just in the past - today. Take a listen on the HF ham bands -
Morse/CW all over the place.

> > It's one thing to say "hams should be knowledgeable about radio theory"

Sure - but why REQUIRE it if someone isn't going to USE it? Why can't
they just look it up, same as the band edges?

Go down that road a ways and there's not much left of the writtens.
>
> > FM repeaters, satellites,

> they're doing.....hhmmm.

So what's the alternative - test all subjects equally? Example - some
hams still use mercury-vapor rectifiers, so let's have some test
questions on mercury-vapor rectifiers.

> > >All hams,
> > >sort of by definition, operate radios. They should all have some basic

Not true of some that I use!

> The argument here is, really, do
> you want just operators, or _skilled_ operators? Learning and knowing theory
> promotes operator _skill_,

whoa there! How does THEORY promote operating skill? Does knowing
Ohm's Law make someone understand SSB better?

> while CW/Morse simply does not, if it did, it'd
> be required for that reason alone for professionals.

Ya lost me there. The pros don't require Morse/CW skill because they
don't use the mode much, if at all, any more. Hams do.

Some of the most skilled operators today are air traffic controllers.
Are they required to know much theory about how radios work? I don't
think so. They have to know procedure and rules and how to keep cool
under pressure, plus a lot of other skills. But their technical radio
theory knowledge doesn't have to be very good at all.

> That it's being phased
> out across the board is sufficient proof that it's irrelevant to having good
> operators;

Not at all! It's being phased out by professionals because their are
other modes with a lower bottom line. Example: By implementing GMDRSS,
the maritime folks could get rid of having radio officers on board
ship.

>a lot of that other 'stuff', on the other hand, isn't.

I've got a list of operating skills you might like. Want me to repost
it?
>
> > >That some few people (or nearly all of

> > more
> > about technology and engineering than about physics and science.
>
> I'm not sure what you mean by 'practical' radio.

I mean actually being able to build, and fix radio sets that work on
the air. As opposed to just basic principles.

IOW it's one thing to understand a block diagram, or even a basic
schematic, and quite another to actually build a working set that
meets all the requirements.

> Are you arguing
> (for whatever reason) that theory should be dropped in favor of
> tech/engineering type questions?

I mean the test should include both.

> > >>Why learn the band edges, mode

Not at all. I'm simply applying the same argument to other parts of
the test.

> If we accept that the idea is true, then to properly test for
> practical knowledge, then facility in all modes needs to be demonstrated.
> This is patently a ridiculous notion.

Then how about this idea:

Perhaps the code test should be replaced by a real practical operating
test. Such a test could work like this: Two typical ham rigs are set
up so that the operators of each one cannot see or hear each other.
The rigs are connected to dummy loads which are located adjacent to
each other. (The idea is to permit a "contact" from one rig to the
other, without putting a signal on the air). The testee sits at one
rig, and another VE sits at the other. The testee is given a sealed
envelope and a few minutes to get familiar with the operation of the
rig. (The operating instructions for the rig would be available at any
time, and in advance of the test). When the actual test begins, the
testee opens the sealed envelope and a timer is started. Inside the
envelope are a set of instructions telling the testee to go to a
specific frequency and call the VE at the other rig, make contact, and
send the enclosed formal message. The VE at the other end has a
similar sealed envelope, but with a different message, which is to be
received by the testee. The idea is to test the actual radio operating
skills of the testee under controlled conditions. There would be a
time limit, too. The testee would have the choice of CW, voice or a
digital mode for the test. Time limits and exact instructions would
vary with the mode and the class of license being tested. Higher class
tests could have shorter time limits, longer messages, and more
complicated instructions, such as having to change frequency at a
certain point in the contact, having to pick the frequency from a list
that includes "wrong choices", etc.

Scoring would be on the basis of mistakes. If a word in the messages
is missing or misspelled, that's a mistake. If nonstandard procedure
or phonetics are used, each deviation is a mistake. If the time limit
is exceeded, each minute over the limit is a mistake. Exceed a certain
number of mistakes and the test is failed. Getting a repeat of a
missed word would NOT be a mistake. Typical exams (but not the exact

exams themselves) would be available as study guides. Audiotapes and
sound files of typical tests could be used for study as well.

Yes, it's a bit more complex than a straight code receiving test, and
requires some equipment and VE time to conduct it. But it could be
done quite easily, and in such a way as to test real operating skills.
The rigs used need not have lots of features, and QRPp power levels
would be more than adequate. Or a "rig simulator" that's really a
gussied-up intercom (two networked laptops?) could be used. Is there
any real reason such testing could not be done? Is it expecting too
much that a prospective ham be able to pass such a test? I think not!

> > >Throw in some formulas that are just plain _wrong_, like scrambling up

> solve problems in it, hence testing for it would be a valid requirement.

Morse/CW is an operating skill widely used by hams, though...
>

> Code at least once.

Only at a basic skill level, and only one skill.

It's like having to solve a couple of simple Ohm's Law problems.

Yep - ya gotta winder what they would change. Require a certain speed, maybe?
>
>UKR probably stand for Ukrania (russia), who we know strongly opposes
>the supression of S25.5.

Maybe. Or maybe they took that position as a bargaining chip. Classic
Soviet-style negotiation, don't give away anyhting.

> Leading manufacture of vaccum tubes supports
>Morse code exams. No suprise there. :-)

Huh? They'd sell more tubes abroad for hard cash if the result of suppressing
S25.5 was more hams running high power HF phone.

> Who is EENA?
>

I dunno, but could be some of the old Soviet block countries? As in "Eastern European..."

Maybe the compromise will be to keep S25.5 but allow countries to bypass it for ham licenses with no privileges below 136 kHz.....

And I think code could go suck water from a camel's backside.

Those that want to use CW, have my blessing. Just don't force
us to learn something we'll never use. They should make the
test essay or fill-in-the-blank, rather then multiple-guess.

Imagine, a VE would actually have to grade a test, then compare answers.
Make them work for their "reimbursement".

Probably not...;) Hopefully I made it clear later on - I'm on-board
with testing on the safety/emergency regulatory portion.

How did enforcement and self-policing evolve during the same period?
I can understand gearing testing towards problem areas - I'm wondering how
the problem(s) start and if testing or enforcement/peer pressure solve them.
Any ideas?

> Also, once upon a time, FCC issued licenses in another service with no
> exam at all. All a licensee had to do was sign a form certifying that

Ahem. ;) But, was it a lack of testing (not that I'm advocating
doing away with testing in the least) or lack of enforcement that caused CB
to spiral out of control?

I'm not buying the argument that Morse is a "basic" skill, sorry.

And I suppose it's good that some people keep a tradition alive -
that's not an argument for maintaining the testing requirement.

Because it's one of those core, basic skills - radio theory. Any
specific band edge/plan what-have-you is specific enough that _I_ don't see
a need to test for it.

> Go down that road a ways and there's not much left of the writtens.

Your arguments are unconvincing for me - you haven't demonstrated
that knowledge of Morse contributes _anything_ to producing good operators
and your argument(s) regarding the written test are bordering on reductio
absurdum. Frankly, there's no rebuttal to the idea that propagation theory
isn't a fundamental concept, so I'm not buying.

More emphasis on core fundamentals, I would say.

You know the answer(s) as well or better than I do - propagation,
carrier wave creation/suppression, etc. Hell, just see the thread on 5 Mhz
going on right now - unless you can argue that knowing what's going on
inside the radio and out at the antenna is of no help in understanding that.

>
> > while CW/Morse simply does not, if it did, it'd

Some hams do; some have no interest in the subject.

It's going to depend on your definition of "skilled operator", isn't it? Yeah, if you've got a technical staff on hand to deal with whatever problems might crop up, maintenance people to maintain the equipment, and very narrow, limited and defined area of operations, then yeah, sure. Basically, this is just your "modern radios that don't break" argument, and more of a narrow look when we need a broader outlook. Is an ATC guy ever going to be installing his own antenna and need to realize that standing in spot "A" when he keys up 1000 watts is probably a Bad Idea? Of course not - engineers take care of that for him. Not so a ham - and being aware of these little things are what go into making a good operator.

It's only the same argument if you accept that practical Morse
knowledge is as fundamentally applicable as propogation theory.

Yeah, but all radios obey Ohm's Law.

If your local lines (phone, DSP, whatever) are down, then you can't get out of your own area to bypass the damage no matter how much you are willing to pay.

This is true of any activity put on by any organization of any type. I belong to an amateur musical group. When I go to the scheduled rehearsals and concerts, I must play my instrument. EVERY group acts this way. If you participate in a group, the group defines what is allowed in the activity.

Why don't we just give you a license and a callsign because you feel
derpived and think you deserve it?

Hey, Pal, I took my test. It was free at the VEC up the street. It
came with a free HT donated by an ex-ham.

Total cost: 1 hour of time to be on the air. Took one week
from thought to ticket.

Here's another kick in your seat, I only got 4 wrong and I DIDN'T study one bit.
Us technical types don't need study guides when we've been in radio since 1977.

I'm glad you passed your code test. Does that make you special?

No kidding - you'll note that I _asked_ that. No, you probably
didn't notice. Here, you quoted me asking it just above there:

>> "And how long were you without phone service?"

Kinda relevant to the point, huh? Might be why I asked it, huh? How
it is that you failed to observe it is something I suspect will remain
shrouded in mystery, however.

>belong to an amateur musical group. When I go to the scheduled rehearsals
>and concerts, I must play my instrument. EVERY group acts this way. If you
>participate in a group, the group defines what is allowed in the activity.

For example, the DXpedition was in May. You had to pay <alot> extra to park near there, so I parked elsewhere and took the bus from there. Then, I got a ride from the host to the on-site shack. After, I got there I saw that most of the others paid the extra fee to park there.

The Hams operated radios all day, and all night. Eating was allowed. Every Ham ate <a lot>. Otherwise, there were no other activities. I did go on a few drives in another Ham's car with some other Hams and did some walks. One of the trips was just to pick up more food. Most of the other Hams did not even do that. Besides that, the event was at the shack.

Since it was a vacation spot. I wanted to do some vacation stuff. But, Hams do not like to do that. They had to operate all day and through the night. Since I did not have a car there, I was stuck there.

It wasn't a required part of the event. The individual Hams chose not to do anything else.

bwaahaahaa!

I recall that for the first three years of the Novice and Tech, those exams were given at the FCC office unless you lived the required distance away. In 1954 FCC made all Novices and Techs "by mail". I think the reason was to slow down the hordes of applicants...
>

Yes it does. You see I've also done the test thing. In front of the FCC. Theory and all. One shot....if failed...come back in another 30 days to try again.

There is no comparison to what I did to what you did. Again... the answer is YES.

The government can't put a gag order on people.
Schools can't either to a large extent...unless they
are private institutions. You can argue on an ethical/moral
basis, but even a school wouldn't have a case against
students discussing a test and/or specific test quetions.

The rules were bogus...that's the point. Unenforcable.

> As I recall the
> old exams, when someone signed the 610 as part of applying for the
license,

Making copies is in NO way equivalent to an individual memorizing
one or more questions and passing them on to Bash.

> How about distributing those copies
> to prospective hams as "study guides"?

Once again, apples and oranges.

> Why or why not?

At this point, what difference does it make?
The arguments are at best academic and more
likly a useless waste of time. Phil and I agree
to disagree and that's the end of it for me.

Cheers,
Bill K2UNK

And who's fault was it that you did not have access to your car?? Yours and yours alone. The point of the DXpedition was to operate from an exotic locale. If the hams chose to participate exclusively in the activity that was the main point of the DXpedition there is nothing wrong with that. You had no reason to expect anything else.

Speaking of which, check this out (forwarded from several reflectors:

begin quote

COAST STATIONS NMC, KPH AND KFS WILL RETURN TO
THE AIR USING MORSE CODE

For the first time since 12 July 1999 listeners around the world will have the opportunity to hear three historic US coast stations on the air using Morse code.

On July 1st, Coast Guard Communications Area Master Station Pacific (CAMSPAC), Pt Reyes will retire the historic "Sparks" from the Telecommunications Specialist Enlisted Rating Badge, as the Coast Guard restructures its work force replacing that specialty with two others, the Operations Specialist and the Information Technology Specialist.

As a special part of the ceremony surrounding this change NMC will return to the air using Morse code (CW) and possibly radioteletype (RTTY). These services, once the mainstays of Coast Guard communications, have been retired for several years but will be reinstated for this ceremony.

At present the frequencies known to be authorized for NMC are 8574kc and 500kc with the possible addition of 488kc. Additional HF frequencies may be authorized by the time of the event. Those wishing the latest information about NMC frequencies and times of operation should write directly to TCCM Loren R. O'Banion at LObanion@d11.uscg.mil .

The public is invited to visit NMC to participate in this event. The unit's Receiver Site, located at 17000 Sir Francis Drake Blvd on the Pt Reyes National Seashore will be open to the public between the hours of 9am and 3pm. Persons wishing to attend must RSVP to (415) 669-2004.

KPH will activate its HF and MF transmitters to participate in this historic event and to give listeners the opportunity to hear three US coast stations on the air - possibly for the last time. KFS will also return to the air on a single frequency.

KPH will transmit on 6477.5, 8642.0, 12808.5 and17016.5 on HF and on 500 and 426kc on MF. KFS will transmit on 17026.0kc. These frequencies have been made available through the generous cooperation of Globe Wireless, the current owner of the KPH and KFS licenses.

KPH and KFS operators will listen for calls from ships on 6276.0, 8368.0, 12552.0 and 16736.0 on HF and 500kc on MF.

Reception reports for NMC may be sent to:

USCG CAMSPAC Pt. Reyes
ATTN: LCCT O'Banian
1700 Sir Francis Drake Blvd. , POB 560
Point Reyes Station, CA 94956-0560
USA

Reception reports for KPH and KFS may be sent to:

Ms. DA Stoops
P.O. Box 381
Bolinas CA 94924-0381
USA

You don't strike me as the kind of fellow looking for a welcome. A newcomer looking for a welcome doesn't walk into a room full of guys with a great deal of experience and say, "Here's another kick in your seat, I only got 4 wrong and I DIDN'T study one bit. Us technical types don't need study guides when we've been in radio since 1977.I'm glad you passed your code test. Does that make you special?"

It might be worth noting that some Techs got their tickets via testing at the FCC office even after that change to mail order only. That would be when one went to take the General test and flunked the 13wpm code test, but passed enough to get 5wpm, and then passed the General written.
Seems like our old buddy Carl Stevenson must fit that category since he claims to have gotten his Tech at an FCC office post-1954.

>> First question: No.
>
> No requirement to hold public hearings? At all?

NONE.

All Commission meetings are open to the public as observers, but
there is no requirement that all matters be discused at an open
meeting. Any proceeding can be a "paper" proceeding with no public
presence, but the results must be made public. That's what a
"Memorandum Opinion and Order" or "Approval by Circulation" is all
about.

The Commission can hold a public hearing at its own discretion,
where specific folks are invited to give testimony on the record,
but that's usually just for show because the "Five Wise Ones"
usually have their minds made up before that time as was very
apparent in the broadcast ownership circus earlier this month.
Matters which are under consideration by the staff under delegated
authority never have open meetings, relying instead on the paper
record.

I'm not even going to get into what the staff thinks about these
"dog and pony" shows.

>> Second Question: The Commission is required to receive and consider

>
> Looks like hams are taking argument to new heights of absurdity.

If you keep truncating my statements you can prove anything.....

Bottom line - they are required to receive input from the public on the record but only during the publicly-announced comment and reply comment phases. At their discretion, they can put late-filed or ex-parte comments in the record.

They are required to "consider" the input - which can be as simple as looking at it and saying "that's nice...." and then putting it aside.

They are not required to go along with anyone's input, be it "public" or "popular" opinion, as long as the decision covers why they didn't. It can be arbitrary in the usual sense of the word ("we think that it's better this way") but cannot be "arbitrary and capricious", a legal term of art which means that they didn't offer to receive public input and "consider" same as explained above.

The one exception to the "public input" rule is if the action removes a burden. Then, there is no requirement for same, it can be done by immediate order. Example is when the amateur operators were no longer required to keep a detailed logbook.

Do you understand it now?

Go that route (unmonitorable content or noncompliance with the specs
set down) and see how fast the band/channel is taken away, especially
by the primary "owner" who didn't want us there in the first place.

2182 or Channel 16 are voice distress channels monitored by speaker
watch.

2187.5 and Channel 70 are digital signal channels monitored by
auto-alarm receivers used to alert watchstanders that there is
a distress call coming shortly on 2182 or Channel 16.

>If someone doesn't intend to operate 'phone, why require that they
>learn the phonetic alphabet? And which one is THE correct one?

There are (at least) three "standard" phonetic alphabets:

ICAO/ITU/lots of others: Alfa, Bravo, Charlie, Delta....
APCO (US Public Safety): Adam, Boy, Charles, David....
The Ma Bell's Operators: America, Boston, Chicago, Denver.....

The first two I learned decades ago from using them. The third is
a dim memory (I dated a Long Lines operator in the dim past....)

Working split is OK in a contest, but it won't generate QSOs if the other
station doesn't even know that the band is open and you can't tell them.

Your viewpoint that they 'don't get' the extra spectrum if there are Ws on it is truly warped.

They won't be able to. Even if the 'Novice' subband is 're-farmed' we
won't get to Tx phone in any of the existing R1 phone subband. The
scenario of 'everyone can transceive with everybody' doesn't occur in the
WRC 2003 proposals, and it isn't even in my proposal in the (much) earlier
thread of giving R2 US hams the R3 US phone subband.

I think that you will find that the 'mod' (modify) proposals do make CW testing no longer compulsory. What they do that the 'sup' (supress) proposals don't is either add a laundry list of requirements of what should be tested in the theory tests and/or specifically say that code testing is optional, instead of just deleting (surpressing) any mention of it.

I think that what we will most likely end up with is a version of s25 derived by reconciling the various 'mod' proposals. It will incorporate (I'm guessing) ITU-R 1544, which is the laundry list of theory requirements. Since it was already written by the ITU, it would be hard to imagine it not making it's way into s25! It may say code testing is optional, or it may no longer mention it, one or the other. Hours will probably be wasted debating that point, whem the effect is the same either way.

I am reasonably sure that when the dust settles we will have specific theory testing requirements at the international level for the first time, and it will be optional for member states to run code tests. We may know the answer this time next week, or perhaps the week after.

Humbug. Between the contests I've called any number of ssb dx stations
on their freqs with cw and asked them to listen up. And they did in
most instances. A particularly memorable example was a VP8 who came
back with "I can't copy the CW but I'm listening on 7215" (or whatever
it was). They know exactly what's going on.

> Your viewpoint that they 'don't get' the extra spectrum if there are Ws on

I'll put it this way: I *much* prefer trying to copy some weak piece
of 40M ssb exotica split when he's down below where the stateside
Athritis nets are allowed to trash the band. And/or when he isn't
buried under a screaming pileup on his freq and nobody can hear him.

Some FCC documents are given DA numbers. Are all DA numbered
documents, decision by staff?

Interesting...the MaBell operator one. I can tell you that by the mid-70s
that MaBell phonetic wasn't being taught or used anymore. I was a
supervicor
in a Long Lines overseas operator office (32 A of A in NYC) from 74 to 75.

The ICAO/ITU one was used in the military when I was in the Navy
during 66-70.

Cheers

I think there is an answer to all of it. The general ham population is simply not going bother with modes and technolgies which are simply reguritations of what they can get with a $15/month dialup connection. Ham radio will survive by being able to do what the Internet cannot do. However this is a swamp with no end because it involves personal preferences and perceptions which in turn makes ham radio unique amongst the radio services. Comparisons with what the other services are doing with advanced technologies therefore are generally moot when it comes to ham radio.

It's a people "problem" and we all know that far-end technocrats historically do not fare particularly well in this field. Been there, done it and I quit beating my brains out long ago.

> As far as packet, that has fallen so far behind, that it is a serious shame.
> Most of the programs are old, crappy DOS based programs, (am unaware of any
> Windows based programs)

Most packet activity today is concentrated in the 2M spots networks and the software is integrated into the Windoze computer logging programs. Look up Writelog and DX4WIN for examples.

> and with incredibly slow transmission speeds and
> limited file sharing capability, I am surprised it hasn't died out
> completely.

It's far from dead but it has "degenerated" into a boring-as-hell but quite useful utility mode for HF dxers and contesters of all flavors.

Nobody in these groups swaps files around on the air, why would they when they can do that on the Internet orders of magnitude faster?

The 2M spots nets are however currently threatened by the more recently available Telnet spots systems. But using a Telnet node involves hanging online for the duration of the contest, typically for 48 hours at a crack. Plus there are still bogus spot filtering problems, etc. Many are not willing to do Telnet so they continue to tune a neighborhood 2M spots node. In this local region we have about 250 regular spots net users and about eight 2M nodes.

Depends on what you mean by "appropriate". If you
mean the FCC, because it had the ITU one as a set of test
questions, wants hams to use that one, then I guess you could
say it is the appropriate one.

If it is simply a matter of better understanding, any one would
do as long as the words were recognizable.

Would you find my call sign any more or less difficult
to understand if I said: Kingdom two unckle nancy kingdon
instead of
Kilo two uniform november kilo?

Cheers,
Bill K2UNK

No, but to someone whose first language is not English the ITU phonetic
alphabet is often more understandable. In fact, not long ago I had a QSO
with an Italian who spoke barely any English (and I can't say much more
than hello and goodbye in Italian), but we had a valid exchange because we
could say 59 and say our callsigns in international phonetics. Now, Italy
isn't rare (although getting a QSL card out of them is another matter),
but if it had been rare DX who couldn't speak English it would still work.
I don't always use standard phonetics, I think that some of the words are
too long in a pile-up, but I always alternate with the standard phonetics.

I think "international" is really the operative term...

>If you
> mean the FCC, because it had the ITU one as a set of test
> questions, wants hams to use that one, then I guess you could
> say it is the appropriate one.

No. If the FCC used APCO or something else other than ITU, I'd
consider it inappropriate due to the international nature of the ARS, and my
opinion would be to dump it in favor of ITU.

> If it is simply a matter of better understanding, any one would
> do as long as the words were recognizable.

This is/was being hashed around in here somewhere...;)

> Would you find my call sign any more or less difficult
> to understand if I said: Kingdom two unckle nancy kingdon
> instead of
> Kilo two uniform november kilo?

Me? No, I'd just be annoyed and probably quit talking to you as soon
as I could do it politely - I'd also form an unfavorable opinion regarding
your skill level. (Fair or not, accurate or not, that's the way it is).
Anyway...
What _I_ can understand is NOT the question, though. Could an
operator overseas, for whom english is a second language, and who's probably
learned the ITU alphabet, understand it? English has spelling pecularities
that aren't obvious to "us" (assuming we're both native speakers of the
tongue) and so a word/sound combination that makes sense to you (and me) can
very easily leave somebody else baffled.

So, if we just "make up" an alphabet as we go, it's going to lead to problems and plain old sloppiness, especially if you just toss in the spoken letter once in a while. "Double-U"....uhm, did he mean Whiskey or Uniform Uniform? Not the same thing, I know, but the same 'neck of the woods', imo.

As far as you're concerned, I'm one of those useless no-coders, so
your "expectations" are meaningless, not only to me but probably most of the
world.

>Can't stand the heat so ya
> got outta the kitchen didja?

Oh, I'm right here, half-wit. Get a handle on that whole "on-off"
switch thing yet?

> Whats the matter Bobby-Poo, too retarded
> to even figger out where I'm from?

If I _cared_, I'd just plug your callsign into the database and
cross-reference that with your NNTP posting host......but why should I waste
my time? Any knowledge about a mindless bigot like you that I accumulate is
simply wasting valuable brain space that could be put to far better use.

Lots of us post here under our names. If not we have our names in our posts. You do neither, you aren't Robert Bake, and you don't put your whole name in your posts. it's all about transparency. No one here has to look up my name to see if I'm real or not - though no doubt many do.

Uh-huh. go to arrl.org or QRZ.com, using my callsign provided. Lots of info about me in just a click. I decided to look you up, as a comparison and it took a bit longer.

But discussing things with you is like trying to wrestle with eels. We get all over the place and don't accomplish much. So be it.

There can be more reasons than that. I'm not operating from a twenty year old perspective, and I have that same amount of interest in those chats.

There you have it. The keyword is interesting. If something interesting comes around, people will go to it. We shouldn't have a blind spot regarding our favorite portion of the hobby.

So what? Mike (if that _is_ your real name) I don't CARE. (And
there's a valid argument to be made about making life easy for loons - I'm
not going to make it, but you've got ZERO business judging somebody using a
valid e-mail and their real name.)

> I decided to look you up, as a comparison
> and it took a bit longer.

Ah, well. You're showing early symptoms there.

> But discussing things with you is like trying to wrestle with eels.

Rrrright - I'm only in two discussions - one regarding the telephone system and ISP's in which it was EVERYBODY ELSE who was off chasing non-existent rabbits, and a rather pleasant chat about testing. Everything else is just allowing fools to demonstrate just how mind-numbingly stupid they are.

> We
> get all over the place and don't accomplish much. So be it.

Well, when the Dickies and the Brians come out of the gate with playground slurs, you're not going to get much focus.

The first uncivil exchange here was Dick:

"I don't think that Robert has all his wires hooked up....."

Rapidly followed by the unicellular organism Brian Kelly:

"Was prolly not here before desktop computers happened. Sheltered
existence. Needs to spend a long weekend in the deep woods without a
keyboard, matches or a UPS."

I didn't insult ANYBODY in my original post in this thread, I asked
questions and made observations.

> > it?
>
> Sure, or e-mail it.

All right, then. This is a repost from a couple of years back.

Here's a list of desireable radio operator skills for hams.

Operator Skills

1) The skill to speak clearly, concisely and distinctly, at a steady rate, level and tone.

2) The skill to listen carefully and understand a transmission under both good and poor conditions.

3) The skill to judge radio conditions on a given frequency and how they are changing.

4) The skill to determine the mode of a received signal by ear or other means.

5) The skill to properly tune in a signal for best reception.

6) The skill to tune up and operate transmitters so as to maximize effectiveness and minimize interference.

7) The skill to correctly judge the radio conditions over a given path and adjust transmissions for best results.

8) The skill to correctly judge the skills of other operators and adjust transmissions for best results.

9) The skill to communicate effectively in less than optimum settings (heat, cold, lack of sleep, etc.)

10) The skill to communicate effectively under less than optimum radio conditions.

11) The skill to communicate effectively with less than optimum equipment.

12) The skill to use the standard phonetic alphabet smoothly and effectively, and judge when its use is needed.

13) The skill to use appropriate abbreviations and prosigns, and judge when they are needed.

14) The skill to write down received transmissions legibly and neatly so that others can easily read them.

15) The skill to write clear, coherent formal messages in standard form.

16) The skill to type, error free, at a rate that makes best use of the transmission mode.

17) The skill to deal with hostile and/or illegally operated stations.

18) The skill to do several things at once while on the air.

19) The skill to have situational awareness in all operating situations.

20) The skill to project a welcoming, friendly and helpful attitude on the air.

Howzat?

Interesting.

It's my understanding that the written tests in some other countries
are more involved than in the USA. Some would say "much more
involved". I dunno how Americans, the FCC, or other US agencies will
take to having the written test requirements dictated to them by
treaty. For many years, they have just been "whatever the country
deems appropriate and necessary", which can mean anything from EE
level down to a couple of simple questions.

Why they would propose spelling out code testing as something
noncompulsory is a mystery. They might as well say that a soldering
test is noncompulsory.

The difference is compulsory vs. recommended.

> It may say code testing is
> optional, or it may no longer mention it, one or the other.

Or it may somehow stay alive if some sort of deal is struck. Ya never
know until the fat lady sings.

> Hours will
> probably be wasted debating that point, whem the effect is the same either
> way.
>
Probably.
> I am reasonably sure that when the dust settles we will have specific
> theory testing requirements at the international level for the first time,

Will be REALLY interesting to see what FCC does if those requirements
aren't met by the current written tests.

> and it will be optional for member states to run code tests. We may know
> the answer this time next week, or perhaps the week after.

The conference closes July 1, right?

Then there's the matter of ratification by the USA.

btw, any news on the 40 meter situation?

>>Just lots and lots of specific insulting.
>
>. At specific individuals who claim to speak for "all ham radio

Uh huh.

I think it's cute how Lennie presumes that those of us who are ACTIVE in Amateur Radio practice should not presume to make comments on it's behalf, yet HE presumes to do just that WITHOUT the benefit of being a part of that which he would presume to regulate.

More evidence supporting my assertion that he's a PUTZ.

>At specific people who think they are radio gods and every-
>. thing they opine are the "truth."

I dare say someone who has PRACTICAL EXPERIENCE in Amateur Radio is a bit closer to it than someone who isn't.

>At specific people who like to insult, demean, and denigrate
>. all those who do not think as they do

You mean like people who call others jackbooted thugs, Nazis, elitists, etc etc etc, Lennie?

Oooooooops! That would BE Lennie!

>>Satire? Nobody else thought it was funny.
>
>. Tsk, tsk, tsk...many did.

Vipul? Brian Burke? Whoa......I am impressed.

I musta missed the part where Vippy was appointed the Decider Of What's
Favorable And What's Not In Amateur Radio. Anyone got a URL for that
one...?!?!

>>However, I don't think one has to give up
>>>everything else for the Ham activities. There was no need for the
>>compromise.
>
>Hams are not allowed to participate in non-radio activities. That's the
>compromise.

Oh? Says who? Does this mean I have to resign from the USHGA and the US
Air Force Auxiliary?

>Its an unwritten set of traditions.

It's a troll of Lennie-illian proportions.

>Its a "requirement" since most Hams don't deviate from it.

Most Amateurs I know are involved in numerous activities outside of
Amateur Radio.

>Neither is any participant allowed to deviate from it - Its
>how the events are organized.

I reiterate my previous question.

>Once you are at the event, you have no choice but
>to do what's scheduled at that event.

Who in the Blue Blazes goes to ANY event organized for ANY purpose just for the purpose of DEVIATING from what was "scheduled"???

What a FREAKIN' IDIOT... ! ! ! ! !

>Disclaimer: I don't mean ALL Hams or Ham-radio activity is anti-social - just
>most.

Oh..Gee whiz...I feel SOOOOOOOOO much better.....Kinda like the guys on the rifle detail who each think THEY had the blank round.

>The example you gave is close to what I mean about anti-social activity. Most
>Hams aren't "cool".

And how is it that in two years as an Amateur Radio licensee you've had the opportunity to meet enough hams to make that assertion?

Just when I start to get the feeling that maybe you're an OK guy afterall, Vipul, you make yet another idiotic post, rife with really stupid assertions and unfounded rhetoric.

Sheeeesh.

There's always this newsgroup-chatroom dominated by a few
extremely regulars. :-)

>There are so many services that have dwarfed amateur radio at this point, in
>regards to digital technology that makes us look like we are in the stone
>ages.

The sages of this chatroom, er, newsgroup, will have everyone
believe that hams all over the world are using OOK CW right
now, therefore everyone licensed "must" be proficient in that
mode...ergo the code test is an absolute "must." :-)

>PSK31 is nice, but through a variety of reasons it is primarily only
>used on HF.

It was devised by Peter Martinez, G3PLX, a long-time innovator
in amateur radio and early proponent of direct-conversion
receivers and the Gingell polyphase network (circa 1974).
It is just one form out of many for written communications via
a very narrow bandwidth not requiring morse code skill.

A problem with the entrenched narrowbanders in hamdom is that
PSK31 invokes some information coding theory which seems
alien to those narrowbanders. They don't understand it, don't
want to understand it, it isn't "natural" and therefore it must be
downplayed and even denigrated since it is not like their own
superb skill at morsemanship.

There could be a lot more experimentation at digital voice on HF
except it, too, involves information coding theory and the narrow-
banders seem to think a thousand-dollar PC is "necessary" to
decode/encode digital voice. Such isn't necessary but the
narrowbanders will seize any opportunity to downplay anything
they feel is alien to the established order.

Digital voice IS being used on HF right now, both by governments
and SW broadcasters (three years on trials so far) and it DOES
work. Governments, particularly militaries, have used it longer on
HF to VHF, but few amateurs know what the signals sound like
so they simply cast it out. Their receivers can't demodulate the

signals so they dismiss it as just some kind of noise.

>It could be utilized on 6 meters where there is some equipment
>out there for ssb/cw. Technically speaking, it could also be used on FM, as
>discussed in an article in QST (in a 2000 or 2001 edition, I will look for
>it again....) for 2 meters or 70cm. There was a experiment done in this
>article where it showed promise on FM for locally based communications.

For local communications there is no need to go to the
narrowbandedness that is the main feature of PSK31.
Rather ordinary speech bandwidths can carry high rates of
data...the Plain Old Telephone System does just fine with
2400 BPS plus and that can translate to 2400 WPM text
rate no problem...or 1200 WPM with heavy forward error
detection/correction. That's far faster than the fastest
electromechanical teleprinter ever did.

>As far as packet, that has fallen so far behind, that it is a serious shame.
>Most of the programs are old, crappy DOS based programs, (am unaware of any
>Windows based programs) and with incredibly slow transmission speeds and
>limited file sharing capability, I am surprised it hasn't died out
>completely.

There's insufficient paradigm adjustment in amateur radio packet.
Most everyone involved seems content with the old ways before
the Internet and modeling on the BBSs for "up to date" methods.

Those not directly involved with packet have the entrenched idea
that PCs are again a "must" for operation. It isn't an absolute. The
PC can reduce the hardware to a bare minimum...and also enable
a lot of different modes and methods of communication. At 2400
BPS throughput, an old Commodore C64 can handle everything as
a "PC" to interface a keyboard, printer, and display. That or an
Apple][can do it and include some FEC. Or it could be hard-
wired or done with a Microchip PIC plus some added chips.

It's an equal mistake (compared to entrenched narrowbanders) to
use the Internet as some kind of model in determining what is
needed. It might be better to see what the early BBSs did and
how they were organized.

>Other modes of digital communcations, which are in the most basic sense,

>have say for instance a dozen different operators able to send digital pics
>or even streaming video (to a point) possibly even simultaneous to net
>control or EOC's? Current packet speeds are not worth bothering for regular

>use, and limited message capability is another issue.

That's rather beyond the entrenched narrowband thinking again.
:-)

It's been a couple years since the first announcement of an HT accessory to take images and transmit JPG format images as well as display them. It didn't seem to meet with any ham market success...yet the cellular phones with picture capability are currently a rage with the general public. Entrenched thinking in amateur radio seems to be ears-only communications. ATV and slow-scan imagining never got to any big thing in hamdom.

>Look at what is commonly used with most law enforcement MDT's, which
>basically were spawned in part from ham radio packet radio. The are not
>perfect yet, but the capabilities are phenomenal compared to existing packet
>capabilities.

Sorry, Ryan, but law enforcement Mobile Data Terminals were modeled more on the military equivalents than any "ham radio packet." Those MDTs are really slow-speed things and work at speech bandwidths...which turns out to be quite fast in getting small quantities of data (wants-warrants, short IDs, etc.). Without the base station coupling to a computer network, the MDT becomes a coffee cup table in a black-and-white. Those MDTs could be modified relatively easily to interface directly with other MDTs, sort of one-on-one comm links similar to EKG direct transmissions to a hospital from an EMT wagon (which work in speech bandwidths).

>I know this is a little different than the intention of the thread, but I
>think we really need to look at our digital capabilities and see what we
>could do, work on getting those limitations that we have lifted and
>designing new and better ways that may make us the envy of other services,
>and making the technology so good that it may be emulated as other things
>amateur radio have been in the past such as cellphone technology, mobile
>data communicators as well as quite a few other technologies the general
>public now enjoys thanks to ham radio.

Ryan, I've been in the electronics industry for a long time. I really don't think that the general public "enjoys" anything it has now "thanks to ham radio" in the last half century. All of today's communications technologies got there through a lot of independent invention and innovation by the industry and by governments.

Cellular telephony would be nothing without a lot of independent work on achieving solid-state transistors to work at microwaves, general information theory to allow both cell switching, digitized voice, digital data compression, and the integrated circuit SoC (System on a Chip), power management that allows long time operation on a single charge.

Mobile Data Terminals are portable versions of solid-state computer terminals adapted for vehicular power and working over speech bandwidths. They now use some FEC and data compression which came about after the first computer terminals were made. In the US such MDTs trace their ancestry to the military TACFIRE and early comm terminals. The networking has its ancestry in the first BBS netting and, before that, the TTY tape relay systems of government and commerce.

>(100=basso, 300=soprano). The vowels and consonant are all at 500 and above.
>The energy up to 10 kHz is "useful", but not mandatory.

Some time about 1960 at the Ramo-Wooldridge Metrology Lab,
lunchtime talk turned to a minimum speech bandwidth. Having
two variable lowpass-highpass filters in for calibration allowed
setting up a 36 db per octave slope away from set cutoff frequency.
Five of us said a standard sentence each into a tape recorder and
we played that back through the filters at various cutoff settings,
then determined if the recorded sentences were clear enough for
understanding. All the five speakers were male and Lab Manager
Ed Dodds, W6AFU, was the one who brought up the subject.

Minimum useable bandwidth was determined as 500 to 1500 Hz.
Individual voices were recognizeable although they had a "hollow"
quality. Sibillants were still heard even if the upper end of the
bandwidth was down to 1.5 KHz.

As far as a rather limited, spur-of-the-moment test went, the
maleness of voices seemed more due to a modulation of
higher tones than requiring an actual low frequency cutoff
further down in the speech spectrum. [we also had a scope on
the filter output, slow time base]

>> What does the Bell standards say?
>
> Ma Bell determined generations ago that up less than 2,000 is bad, to
2500Hz is
>vital, 3000 is nice, and beyond 3000 as not price effective (but sure sounds
>pretty). On the low end, "Naturalness" ("nice") required 200. I say that the
>audio below 500 is not worth the bandwidth it devours.

Telephone standards for speech bandwidth were determined for
lots of different reasons, including "natuaralness" (to please the
customer) with the upper end determined by the need to have
equalization of longlines at the limit of central office to
subscriber loop.

>An article by Kryter in the 1950's declared that if you wanted to do speech
with

>appropriate.
>If you decided at devote 1 kHz of spectrum to the task, then two bands, one
from
>250-750 and one from 1250 to 1750 would do. If three 500 Hz bands, then add a
>third 500 as from 2250 to 2750.

I recall a number of different experimenters of the 1950s on
speech bandwidths, including a lot of vocoder projects. At
that time in amateur radio, hams were just picking up on SSB.
It was of several such tests and articles that sparked the
lunchtime conversation.

It was first known as the "NATO Phonetic Alphabet" when it came
into being in the US military in 1955. The International Civil
Aviation Organization (ICAO) adopted it shortly thereafter since
the ICAO standardized spoken Air Traffic Control language as

English.

1955 was 48 years ago. :-)

Might possibly be that particular ISP. I subscribe to two different ones,
both dialup. On one of them I can almost never get a hookup. Something in
their firewall system interferes. On the other one I can always get a
practical, reliable hookup. The odd thing is that the one that works is the
"busier" system.

It would be more difficult in the first case than in the second. The ITU "standard" phonetic alphabet words were selected on the basis that they were, in general, relatively easy to pronounce for most people regardless of their native tongue and relatively easy to understand even when mispronounced. They didn't succeed 100% but they didn't do a bad job either.

In addition, if we all use and are accustomed to the same phonetics, our brains will respond automatically rather than having to take the split second to translate the unusual phonetic.

From the IARU web site:

"Agenda item 1.7.1 (Article 25): The proposals relating to 1.7.1 were introduced in Working Group 4C and referred to Sub-Working Group 4C3 for discussion and possible decision. On Friday afternoon the proposals were introduced in 4C3, along with the information paper containing the views of the IARU."

"The USA withdrew its proposals on 1.7.1 in favor of the Inter-American Proposals, which is favorable for us because the IAPs include incorporation by reference of Recommendation ITU-R M.1544 whereas the USA proposals did not."

"The other differences between the various proposals under 1.7.1 were identified, but no effort as yet has been made to resolve them."

I would expect the current VEC written exams to met the M1544 recommendation if it becomes a manatory incorporation by reference. At most the FCC might need to renact 47 CFR 97.503(c) with a new topic list. The USA position opposes the mandatory incorporation by reference of M1544.

My exposure to that was in the late 50s......it's listed somewhere
but I can't put my hands on it.

>The ICAO/ITU one was used in the military when I was in the Navy
>during 66-70.

That one I was exposed to when I started hamming in the early 50s.

And then there was the WW-II era "military" phonetics:

Able, Baker, Charlie, Dog, Easy, Fox ....

And finally, the ARRL had its own (found in the 1965 "Radio
Amateur's Handbook") which was a mish-mash of several others:

Adam, Baker, Charlie, David, Edward, Frank.......

> I was a supervicor in a Long Lines overseas operator office (32 A of
> A in NYC) from 74 to 75.

"This is a test transmission for circuit adjustment purposes from a
radio station of the American Telephone and Telegraph Company.
This statsion is located near New York City."

How well I remember that as a SWL in NYC in the early 50s, and again
when we would set up the HF circuits from Tel Aviv to NY in the
mid-60s. I even got to talk on the order wire to one of the NY
techs once from Rishpun (the transmitting station north of TA) when
they were having some problem. It was a double-hop path, as I
remember it. We preferred the path from TA to Paris and then on
TAT-4 to NY for reliability. All gone now, replaced by satellites
and underseas cable in the Med and the Atlantic.

Olde Farte Memories.......

Not exactly. The requirement for testing Morse proficiency as a
prerequisite to getting a license might be abolished, but the use of
the mode on the air will not be abolished, and those who enjoy using
it will be free to continue to do so...which is as it should be.

>The dream will become reality and old farts CW
>coders will be (at least) smashed by the new ham
>mass on the HF bands.

I hope not, since this would require (1) operating another mode in a
part of the bands currently reserved for CW and data, and (2) hams
deliberately interfering with other stations - both of which were
still considered very bad form last time I checked.

>In quite all civilized countries, there is about one
>half of ham operators that are technicians. Think
>that the amount of DXers on HF will increase on

If you mean the abolishment of the testing requirement, yes, I think
it will open the door to more hams getting licenses that grant HF
privileges. If you mean the abolishment of the mode, that's not going
to happen anytime soon, nor should it.

>The new challenge will be probably to get a

You seem to have a fetish about stations smashing each other. Perhaps
you picked the wrong hobby. This is radio, not demolition derby.

>Most of hams have a bad antenna system. 2 kW
>are not necessary to make a QSO. You can get

>a low SWR, but poor radiation of the power if
>your antenna acts like a resistor.

This is truer than many people realize. However, not everyone lives where it is possible for them to erect an ideal antenna system - so we make do with what we're able to put up.

>Its not necessary to make a QSO with 59+60dB
>reports. 56 is sufficient considering the QRN.

You should listen to the Century Club nets some time. There are routinely successful contacts made with signal reports of 2/2. Furthermore, the difference between 5/9(+60dB) and 5/6 is a lot less than the difference between 100 watts PEP and 1500 watts PEP.

>Welcome to the technicians worldwide on HF

TACFIRE (AN/GSG-10) was a system composed of computers and remote devices linked by digital communications using both radio and wire commo equipment, which automated field artillery command and control functions. It was replaced by IFSAS (Initial Fire Support Automated System, not to be confused with Martec's explosion analysis software by the same acronym) beginning in 1994.

You should listen to the Century Club nets some time. There are routinely successful contacts made with signal reports of 2/2. Furthermore, the difference between 5/9(+60dB) and 5/6 is a lot less than the difference between 100 watts PEP and 1500 watts PEP.

TACFIRE (AN/GSG-10) was a system composed of computers and remote devices linked by digital communications using both radio and wire commo equipment, which automated field artillery command and control functions. It was replaced by IFSAS (Initial Fire Support Automated System, not to be confused with Martec's explosion analysis software by the same acronym) beginning in 1994.

Not exactly. The requirement for testing Morse proficiency as a
prerequisite to getting a license might be abolished, but the use of
the mode on the air will not be abolished, and those who enjoy using
it will be free to continue to do so...which is as it should be.

>The dream will become reality and old farts CW
>coders will be (at least) smashed by the new ham
>mass on the HF bands.

I hope not, since this would require (1) operating another mode in a
part of the bands currently reserved for CW and data, and (2) hams
deliberately interfering with other stations - both of which were
still considered very bad form last time I checked.

>In quite all civilized countries, there is about one

If you mean the abolishment of the testing requirement, yes, I think
it will open the door to more hams getting licenses that grant HF
privileges. If you mean the abolishment of the mode, that's not going
to happen anytime soon, nor should it.

>The new challenge will be probably to get a

You seem to have a fetish about stations smashing each other. Perhaps
you picked the wrong hobby. This is radio, not demolition derby.

>Most of hams have a bad antenna system. 2 kW

This is truer than many people realize. However, not everyone lives where it is possible for them to erect an ideal antenna system - so we make do with what we're able to put up.

>Its not necessary to make a QSO with 59+60dB

> look it up.

Well, there's only going to be room for "x" number of questions.....

> Just like the Driver License......

Well, an ordinary driver's license leaves plenty of room for "on the
job" type training and learning.
If your saying some things should be "reflexive", I agree - we'll
probably differ on what some of those things _are_, and, to run with your
analogy, differ on what the tests should be for a learner's permit, a
driver's license, a CDL, etc.

But to put a different spin on your point, a skilled operator should
have the sense (and should be trained) to look up something if he's not sure
about it. Correct me if I'm wrong, but I suspect that out-of-band ops are
the sort of thing that get under people's skin, no?
Then, which is more desirable: ask a handful of questions on the
subject, leaving the testee feeling he has a grasp of what's going on (which
apparently some number of them don't), OR teach them that there's some
things Thou Shalt Double-Check Or Else. Which is better? My training tends
towards the latter.

Source record: 69133

Within 15 days, WRC 2003 will be finished and
CW will be abolished.
The dream will become reality and old farts CW
coders will be (at least) smashed by the new ham
mass on the HF bands.
In quite all civilized countries, there is about one
half of ham operators that are technicians. Think
that the amount of DXers on HF will increase on
that bands soon with the abolishment of CW.
The new challenge will be probably to get a
DXCC with digital modes like PSK31 in QRP
mode, although silly hams will continue their
pollution of the bands with kW amplifiers to
smash other stations (see the ads on the net of
hams selling a 2 kW amp to buy a 5kW one,
etc ...).
Most of hams have a bad antenna system. 2 kW
are not necessary to make a QSO. You can get
a low SWR, but poor radiation of the power if
your antenna acts like a resistor.
Its not necessary to make a QSO with 59+60dB
reports. 56 is sufficient considering the QRN.
So, please stop using kW amplifiers (you generate
splatters, harmonics, etc ... on the bands) and use
digital modes with low RF power. Remember that
HF bands are international and that you must
SHARE them with hams of other countries.

Welcome to the technicians worldwide on HF
and peace and love for all !

From: Todd Daugherty <toddaug@consolidated.net>
Message-ID: <3ef3a913$1_5@corp.newsgroups.com>
Source record: 69137

NEW YORK (Reuters) - Nextel Communications Inc. (Nasdaq:NXTL <http://us.rd.yahoo.com/dailynews/finance/nm/tc_nm/storytext/*http://finance.yahoo.com/q?s=nxtl&d=t> - news <http://us.rd.yahoo.com/dailynews/biz/nm/tc_nm/storytext/*http://biz.yahoo.com/n/n/nxtl.html>) said on Friday it would use trademark law to stop emerging rivals of its 10-year-old walkie-talkie service from using the term "push-to-talk" to describe their products. But lawyers said Nextel, the No. 5 U.S. wireless telephone company and so far the only one to offer a feature on a phone that allows customers to talk at the push of a button, could face an uphill battle to protect the term.

"You can't use trademark law to remove words from the dictionary and prevent their ordinary use," said Steven Bauer, a partner in the intellectual property group at Boston law firm Testa, Hurwitz & Thibeault.

"They may have been the first ones to call it push-to-talk but being the first one to call it that doesn't mean you're the only one who can call it that," said Bauer who argued that the phrase was too generic to be a strong trademark.

Nextel, which also uses the brand name Direct Connect to describe the service, said in a statement on Friday the U.S. Patent and Trademark Office had approved registration of Push to Talk and its abbreviated form PTT as trademarks.

"It makes smart and strategic sense to protect a name that refers to a brand," said Nextel spokesperson Audrey Schaefer.

If another company used the term push-to-talk Nextel would "notify the organization that Nextel owns the rights to that label," Schaefer said.

Nextel's service has been a huge hit among small work groups such as technicians, construction workers and salesmen in the field who rely on the push-to-talk feature to ask colleagues for answers to quick questions. Such walkie-talkie interactions are a convenient alternative to having to dial a number on a phone.

A spokesperson for Verizon Wireless (NYSE:VZ <http://us.rd.yahoo.com/dailynews/finance/nm/tc_nm/storytext/*http://finance.yahoo.com/q?s=vz&d=t> - news <http://us.rd.yahoo.com/dailynews/biz/nm/tc_nm/storytext/*http://biz.yahoo.com/n/v/vz.html>), the No. 1 U.S. phone company, said Nextel's move would not interfere with its plans to soon launch a competitive service.

"Nothing that Nextel said today is going to delay our plans," said Andrea Linskey. "We'll have a walkie-talkie type feature on our network later this year."

Verizon could launch its rival service as early as next month, industry sources said.

Schaefer said its Push-to-Talk trademark was registered on the supplemental trademark list, which means that it is much easier to contest and its PTT trademark was approved for the principal trademark list, which offers more protection.

"The whole reason (a name) is on the supplemental list is because the suspicion is it may be the industry standard way to describe the function or may become the way," Gray Cary Ware & Freidenrich attorney Jeffrey Blumenfeld.

As subscriber growth slowed in the U.S. market, wireless service providers began looking at push to talk and other new ways to attract customers and encourage them to spend money.

Nextel's walkie-talkie service attracted attention among competitors because it wins the company high-value customers in areas including construction, transportation and government.

Another rival Sprint PCS has said it would launch walkie-talkie services later this year, while AT&T Wireless (NYSE:AWE <http://us.rd.yahoo.com/dailynews/finance/nm/tc_nm/storytext/*http://finance.yahoo.com/q?s=awe&d=t> - news <http://us.rd.yahoo.com/dailynews/biz/nm/tc_nm/storytext/*http://biz.yahoo.com/n/a/awe.html>) said recently it could begin testing walkie-talkie technology as early as this year.

3003. Tech Exam Pool in Text File?

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-21 00:35:48 UTC
From: Kim W5TIT <fahgedit@nomail.net>
Message-ID: <bd09bu$r89@library2.airnews.net>
Source record: 69138

Does anyone happen to know of a place where the Technician exam question pool can be downloaded? I am helping a blind friend of mine get "back into" ham radio. He let his license expire and I was telling him about all the new rules, etc., and he wants to get back into it. It's just not very easy for him to take practice exams, etc., on the internet, so I told him I'd try to find the text file for download.

Thanks in advance!

Kim W5TIT

Forty meter Phone DXers in the U.S. listen down the band for foreign stations. Foreign stations listen up the band for U.S. stations. The system has been working nicely for decades, thank you.

> Your viewpoint that they 'don't get' the extra spectrum if there are Ws on

Howzat? If the realigned band is opened to U.S. ops, there'll be no DX refuge.

A crowd didn't start the thread and a crowd won't do the welcoming.

I've never seen ANY place that charged that much for parking, even in Beverly Hills, CA. I think that's a bit of farce on YOUR part.

WHERE was this place where parking is alleged to be $60, Vippy?

Uh huh. THAT means you probably were not DRINKING a sufficient amount of fluids, Vippy. It will do that even if you are eating "healthy" foods.

>>Ham RADIO operators spending a weekend operating radios....Geeeeee...What a
>>bummer, huh?
>
>I expected to operate radios, even wanted to. I did not expect that it would
>be

Then you weren't paying attention to the details of the operation. That's YOUR fault.

And assuming you are over 18, no one was required to act as tour director for you. Get off your own lazy but and go sight seeing if you want to. But then like your wanting to put antennas up but not help take them down, you can't be depended upon when you're needed.

>> Well shame on them for not consulting you about side trips to

"Kim W5TIT" <fahgedit@nomail.net> wrote in message news:bd09bu$r89@library2.airnews.net...
Does anyone happen to know of a place where the Technician exam question pool can be downloaded? I am helping a blind friend of mine get "back into" ham radio. He let his license expire and I was telling him about all the new rules, etc., and he wants to get back into it. It's just not very easy for him to take practice exams, etc., on the internet, so I told him I'd try to find the text file for download.

Thanks in advance!

Don't these fools (not you, Todd) know that "walkie-talkie" is in
fact a registered trademark of Motorola, Inc. and that The Big Emm's
legal staff is quite adamant that they will protect it. They were
successful in getting it dropped from the draft text of the
Electronic Communication Privacy Act in 1985 after it was brought
to their attention.

As I explained, that isn't so. We can only use phone down to 7150 in the US, and no-one expects it to go lower than 7100 if the Novice subband is 're-farmed' The phone subband in other countries goes down to at least 7050, and even down to 7030 in some cases. If you are expecting any of that spectrum to be reallocated to CW in other countries, dream on.

This is what I mean by deals and bargaining. The USA might have to accept
mandatory incorporation by reference of M1544 in order to get something else
(like changes in the code test wording) into the treaty.
>
>> > and it will be optional for member states to run code tests. We may know

OK - tnx again.
>
>> Then there's the matter of ratification by the USA.

I doubt very much that FCC would take any action until the treaty is ratified.
However, once it is ratified, I would not be surprised if they just dumped
Element 1 under the 'reduction of burden' thingy.

>> btw, any news on the 40 meter situation?

(Guess not)

The food was very unhealthy. Large quantity and alot of fat. Also, they relaxed the sanitation like placing spatulas on the dirty table. I'm surprised I didn't get sick, but I felt perfectly fine.

Also, they did not know how to cook. The food would have been alot better if I had prepared it. I got invited to another event where the host is going to. Next time I will help prepare the food.

>Get off your own lazy but and go sight seeing if you want to.

I did, during the day I took a walk and drove with some other Hams. At night I did not have a car. Others did, but did not go anywhere.

>>Well, if someone had consulted me, I could have clued them in.
>
> If you ahd the gonads to ASK you wouldn't be WHINING about it now.

Possibly.

>

I don't have the documents any more (but I'll try to get my hands on them
again), but as I remember it, modding would mean that S25 would be changed
into a rule that states that a local administration can decide whether or
not the morse code is required.

At this time, something like the same applies for the 'above 30 MHz' rule:
local administrations can decide if morse code exam is required for
operating above 30 MHz.

In conclusion: probably the part '30 MHz' in the current S25-sentence will
be skipped.

3028. Why digital modes are few used

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-21 13:50:04 UTC
From: Nomen Nescio <nobody@dizum.com>
Message-ID: <43193ef4dff3a3553deffd68275f84ef@dizum.com>
Source record: 69161

As it was said by some hams here, digital modes
like PSK31 are few used, especially on 6m.
Why ?
If its true that 90 per cent of packet users use
old VT100 emulators at 1200 bauds, many
DXers are always stuck with CW because they
are old and do not understand how to use a
computer to play PSK31. Its stone age
although PSK31 is 10 dB better than CW.
More, there is a money reason explaining that
PSK31 is not used. It requires a portable computer
(for portable/contest operation) that must have a
sound card, a lot of RAM to use Win9x and
a CD-ROM to install Win9x. Actually, in all
the world (because USA is not the only country
on Earth), surplus lowest priced laptops are
principally 486 based computers with no sound
card, no CD-ROM and 4 or 8 MB RAM,
running DOS and sometimes Win31.
With this equipment, impossible to play PSK31.
All the hams on Earth do not have $1000 to
spend in a modern laptop just to play with PSK31.
Its impossible to add a PCMCIA sound card on
these old laptops because the PCMCIA bus has
NO DMA, so there is no PCMCIA sound blaster
clone card available.
Any cheap PSK31 interface solution ? Tell us ...
There is no acceptable PSK31 program running
under DOS (although waterfall graphics will be
possible also under DOS), and even on Win9X,
the author of WinPSKse is too much lazybones to
allow 640x480 display (same problem with
WSJT, running only in 800x600 mode) and on a
486 laptop, its not possible to run 800x600.
Here are some reasons that explain why PSK31
is not very used especially on 6m. More, there
is no worldwide PSK31 consensus to determine
a DX calling frequency for PSK31 on 6m.

Packet interest had fallen. TAPR was a pioneer
in the years 80s and we all thank TAPR for their
TNC2 project (always used in APRS today) but
the applications of packet-radio were limited to
DX (yes it was possible with level 2) and BBS

traffic. BBS killed packet interest and now Internet has killed BBS, so the packet network is quite desert except some DX clusters and APRS channels but its NOT really ham-radio activities.

Many hams use now ECHOLINK but ECHOLINK is not AUTHORIZED in all countries. Many pirates interface their VHF/UHF ham station to Internet to allow ECHOLINK but it is often forbidden to make a bridge between radio bands and Internet (for security reasons, terrorists could use ECHOLINK to communicate).

Thats the deal. We have modern modes of transmissions like PSK31, but laws speaking always of CW (19th century). Its time like for sea ships, to forbid CW on HF bands in order to oblige the users to get modern equipments.

It's my understanding that in some large number of countries phone is
legal all the way down to 7.000. The rest is operating practices.

> If you are expecting any of
> that spectrum to be reallocated to CW in other countries, dream on.

Dave isn't expecting any such thing, cite an example of a "CW
allocation" in the HF bands.

==========

==>ARRL URGES INFORMED COMMENTS IN FCC BPL INQUIRY

The ARRL is urging amateurs to file well-thought-out, informed comments when responding to the FCC's Broadband Over Power Line (BPL) Notice of Inquiry (ET Docket 03-104). The FCC published its NOI on May 23. The NOI asks how the FCC should regulate the delivery of broadband services to homes and businesses using electrical wiring to conduct high-speed digital signals. While the FCC has dubbed this technology Broadband over Power Line, it's more commonly known as Power Line Carrier or PLC.

BPL would use building and/or overhead power lines to conduct HF and low-VHF digital signals to network computers. The FCC has expressed its unabashed enthusiasm for BPL, which it views as a competitive Internet access point. Utilities consider BPL as another means to use existing infrastructure to generate additional revenue.

The NOI is not asking if BPL technology should be permitted. Under existing FCC rules, BPL systems may be built and used in the US right now. The FCC is asking how the rules might be changed "to promote and encourage new BPL technology," in the words of the NOI.

Present FCC Part 15 rules say that carrier-current systems--including BPL/PLC--need to meet the general radiated emission limits for unlicensed "intentional emitters." While the rules permit BPL at significant power levels, utilities would prefer that the FCC authorize even higher power levels. BPL systems under development and in field trials use spectrum between 1.7 and 80 MHz, but the NOI also asks whether BPL should operate on other parts of the spectrum as well.

As of mid-June, nearly 1000 comments already had been filed in the proceeding. The ARRL has urged amateurs who comment to outline the important uses they make of Amateur Radio and the impact strong interference from BPL could have at HF and low-VHF amateur frequencies.

Electric utility companies will operate many, if not most, BPL systems. ARRL members who have had experience dealing with power line interference and utilities' responses to complaints also may want to describe those experiences in their comments to the Commission.

Amateurs filing comments to the FCC NOI might want to consider these topics and points:

* Amateur Radio is a valuable resource that must be protected.

* Describe the uses you make of Amateur Radio, especially those with a public service or emergency communication aspect.

* The present FCC Part 15 limits for this technology already can result in substantial interference potential to amateur frequencies.

* BPL systems that radiate on wide swaths of spectrum and occupy entire neighborhoods have greater interference potential than localized systems, such as switching power supplies or electric motors.

* The FCC has promised to protect licensed users of the spectrum. We must hold them to that promise.

For more information, see "Understanding the FCC's Broadband Over Power Line (BPL) Notice of Inquiry" <http://www.arrl.org/news/features/2003/06/19/2/>. An ARRL white paper, "Calculated Impact of PLC on Stations Operating in the Amateur Radio Service" <http://www.arrl.org/tis/info/HTML/plc/files/C63NovPLC.pdf> provides technical details. The ARRL's Broadband Over Power Line resource page contains links to worldwide studies and other resources.

The ARRL has initiated an important Spectrum Defense Fund campaign to support activities to educate government officials on the potential threat that BPL poses to Amateur Radio. To find out more, or to support ARRL's efforts in this area, visit the ARRL's secure BPL Web site <https://www.arrl.org/forms/development/donations/bpl/>

The complete NOI is available on the FCC Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-100A1.doc>.

Comments are due on or before July 7, 2003. Reply comments are due on or before August 6, 2003. Interested parties may submit electronically filed comments via the FCC's Electronic Comment Filing System (ECFS) <http://www.fcc.gov/cgb/ecfs/>. Under ECFS Main Links, click on "Submit a Filing." In the "Proceeding" field, enter "03-104" and complete the required field. Comments may be typed into a form or you may attach a file containing your comments. Comments also may be submitted via e-mail, per instructions on the ECFS page.

>> I'll admit that is an advantage, but it balances the one's you can't work
>> because of this problem

One of the first things even the semi-rare ones do is to work split in order to
FORCE the pack to spread out. And the 'phone folks have to spread out a lot,
unlike CW, where a difference of a few dozen Hz is enough. And the CW folks
with QSK can listen to the dx's freq between letters and words.
>

Heck. let's define the problem:

Suppose that as a result of WRC 2003, 7100-7200 becomes worldwide exclusive
amateur and the SWBC moves away. Maybe we even get 7200-7300. What problems
will remain after that happens?

The federal courts do use the phase "arbitrary and capricious" when
overturning or affirming a FCC decision. This is usually in reference
to 5 USC 706 (see end), which used the phrase "arbitrary OR capricious".
The phase means far more just "receiving and considering public
input". The Commission can not immunize it decisions from judicial
review by merely "receiving and considering public input". See

Arbitrary and capricious. Characterization of a decision or action
taken by an administration agency or inferior court meaning willful
and unreasonable action without consideration or in disregard of
facts or law or without determining principle. Elwood Investors
Co v. Behme, 79 Misc.2d 910, 361 N.Y.S2d 488, 492.
See Rational basis test.

Rational basis test. Under this test, an appellate court will not
second-guess the legislature as to the wisdom or rationality of a
particular statute if there is a rational basis for its enactment, and
if the challenged law bears a reasonable relationship to the
attainment of some legitimate government objective. The same
test may be applied when a court is reviewing a decision of an
administrative body because of the expertise of such body.
It has been said that the protection of the public from unwise or
improvident statute is to be found at the voting polls or by
referendum, not court. Munn v. Illinois, 94 U.S. 113, 134, 24 L.Ed.77.
This test does not apply, of course, if the statute or decision
is unconstitutional.

As a standard of review for statutory enactments challenged on
equal protection grounds, this test requires that classifications
created by a state must be reasonable, not arbitrary, and must rest
on some ground of difference having a fair and substantial relation

to the object of the legislation, so that all persons similarly
circumstanced shall be treated alike.
Aladdin's Castle, Inc. v. City of Mesquite, C.A.Tex., 630 F.2d 1029, 1039.

Orion Communication v. FCC, District of Columbia Circuit, #96-1430,
(12/19/1997)
We reverse a Commission decision granting or denying a broadcast
license only if that decision is "arbitrary, capricious, an abuse of
discretion,
or otherwise not in accordance with law. 5 USC 706(2)(A); See
DirectTV, Inc. v. FCC, 110 F3d 816. 826 (D.C. Cir 1997).
The Commission's decisions in this case clearly fail to meet even this
deferential standard. The Commission recognized that it had the
'discretion to maintain [Orion's] existing service upon ... remand ...
in order to avoid disruption of service to the public."
See 11 FCC Rcd 19589 91996). In nonetheless rescinding Orion's
authority to provide such service, the Commission abused its
discretion and acted arbitrarily and capriciously in the following respects:
.....

Larry KC8EPO

~~~~~~
7 USC 706 provides:

5 U.S.C. 706. Scope of review
To the extent necessary to decision and when presented, the
reviewing court shall decide all relevant questions of law,
interpret constitutional and statutory provisions, and
determine the meaning or applicability of the terms of an
agency action. The reviewing court shall -

(1) compel agency action unlawfully withheld or unreasonably delayed; and

(2) hold unlawful and set aside agency action, findings,
and conclusions found to be -
(A) arbitrary, capricious, an abuse of discretion, or otherwise
not in accordance with law;
(B) contrary to constitutional right, power, privilege, or immunity;
(C) in excess of statutory jurisdiction, authority, or limitations,
or short of statutory right;
(D) without observance of procedure required by law;
(E) unsupported by substantial evidence in a case subject
to sections 556 and 557 of this title or otherwise reviewed
on the record of an agency hearing provided by statute; or
(F) unwarranted by the facts to the extent that the facts are
subject to trial de novo by the reviewing court. In making
the foregoing determinations, the court shall review the
whole record or those parts of it cited by a party, and
due account shall be taken of the rule of prejudicial error.
~~~~~~

Definition of arbitrary
1. Determined by chance, whim, or impulse, and not by necessity, reason, or principle: stopped at the first motel we passed, an arbitrary choice; arbitrary division of the group into halves.
2. Based on or subject to individual judgment or preference: The diet imposes overall calorie limits, but daily menus are arbitrary.
3. Established by a court or judge rather than by a specific law or statute: an arbitrary penalty.
4. Not limited by law; despotic: the arbitrary rule of a dictator.

Synonyms: arbitrary, capricious, whimsical. The central meaning shared by these adjectives is "determined by or arising from whim or caprice rather than judgment or reason": an arbitrary decision; a capricious refusal; the butt of whimsical persecution.

>either.

The "ITU standard phonetic alphabet" is the very same one
adopted by the US military and NATO members in 1955. That
worked well enough for English, French, German, Flemish, Dutch,
Danish, Norwegian languages. The ICAO thought it good enough
to adopt for international civil aviation air traffic control spoken
communications just a year later.

The ITU just picked up on something already tried and proven in
use for years in many languages.

Very interesting, you guys should write article about the HF circuits.

Were HF circuits full or half duplex?
How many voice channels?
What kind of antenna did they used?

<w4nti@NOSPAMmindspring.com> was blabbling:

...==
...
...==>ARRL URGES INFORMED COMMENTS IN FCC BPL INQUIRY
...
...The ARRL is urging amateurs to file well-thought-out, informed
comments
...when responding to the FCC's Broadband Over Power Line (BPL) Notice
of
...Inquiry (ET Docket 03-104). The FCC published its NOI on May 23.
The NOI
...asks how the FCC should regulate the delivery of broadband services
to
...homes and businesses using electrical wiring to conduct high-speed
digital
...signals. While the FCC has dubbed this technology Broadband over
Power
...Line, it's more commonly known as Power Line Carrier or PLC.
...
...BPL would use building and/or overhead power lines to conduct HF
and
...low-VHF digital signals to network computers. The FCC has expressed
its
...unabashed enthusiasm for BPL, which it views as a competitive
Internet
...access point. Utilities consider BPL as another means to use
existing
...infrastructure to generate additional revenue.
...
...The NOI is not asking if BPL technology should be permitted. Under
...existing FCC rules, BPL systems may be built and used in the US
right now.
...The FCC is asking how the rules might be changed "to promote and

encourage
...new BPL technology," in the words of the NOI.
...
...Present FCC Part 15 rules say that carrier-current
systems--including
...BPL/PLC--need to meet the general radiated emission limits for
unlicensed
..."intentional emitters." While the rules permit BPL at significant
power
...levels, utilities would prefer that the FCC authorize even higher
power
...levels. BPL systems under development and in field trials use
spectrum
...between 1.7 and 80 MHz, but the NOI also asks whether BPL should
operate
...on other parts of the spectrum as well.
...
...As of mid-June, nearly 1000 comments already had been filed in the
...proceeding. The ARRL has urged amateurs who comment to outline the
...important uses they make of Amateur Radio and the impact strong
...interference from BPL could have at HF and low-VHF amateur
frequencies.
...
...Electric utility companies will operate many, if not most, BPL
systems.
...ARRL members who have had experience dealing with power line
interference
...and utilities' responses to complaints also may want to describe
those
...experiences in their comments to the Commission.
...
...Amateurs filing comments to the FCC NOI might want to consider
these
...topics and points:
...
...* Amateur Radio is a valuable resource that must be protected.
...
...* Describe the uses you make of Amateur Radio, especially those
with a
...public service or emergency communication aspect.
...
...* The present FCC Part 15 limits for this technology already can
result in
...substantial interference potential to amateur frequencies.
...
...* BPL systems that radiate on wide swaths of spectrum and occupy
entire
...neighborhoods have greater interference potential than localized
systems,
...such as switching power supplies or electric motors.

...
...* The FCC has promised to protect licensed users of the spectrum.
We must
...hold them to that promise.
...
...For more information, see "Understanding the FCC's Broadband Over
Power
...Line (BPL) Notice of Inquiry"
...<http://www.arrl.org/news/features/2003/06/19/2/>. An ARRL white
paper,
..."Calculated Impact of PLC on Stations Operating in the Amateur
Radio
...Service"
<http://www.arrl.org/tis/info/HTML/plc/files/C63NovPLC.pdf>
...provides technical details. The ARRL's Broadband Over Power Line
resource
...page contains links to worldwide studies and other resources.
...
...The ARRL has initiated an important Spectrum Defense Fund campaign
to
...support activities to educate government officials on the potential
threat
...that BPL poses to Amateur Radio. To find out more, or to support
ARRL's
...efforts in this area, visit the ARRL's secure BPL Web site
...<https://www.arrl.org/forms/development/donations/bpl/>
...
...The complete NOI is available on the FCC Web site
...<http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-100A1.doc>.
...
...Comments are due on or before July 7, 2003. Reply comments are due
on or
...before August 6, 2003. Interested parties may submit electronically
filed
...comments via the FCC's Electronic Comment Filing System (ECFS)
...<http://www.fcc.gov/cgb/ecfs/>. Under ECFS Main Links, click on
"Submit a
...Filing." In the "Proceeding" field, enter "03-104" and complete the
...required field. Comments may be typed into a form or you may attach
a file
...containing your comments. Comments also may be submitted via
e-mail, per
...instructions on the ECFS page.

Laptops tend to be expensive. Also, the hard drive is slow and there tend not to be a ton of extra goodies on them for a fairly good reason - battery life. As far as the older folks not understanding it, I've helped more people at work with computers than you likely have. The kids try and tell me what I need (the latest and greatest with huge video boards) ... why? To play games. 486 machines are really pretty much obsolete (but certainly can be used for some applications). Recently, I hammered out a quick diagram of motor locations on some machines. Someone asked if I used Visio. No, I've used Visio, but I was using Word for something else and simply drew the diagrams with Word (why fire up another application for something the current application can do well for the desired results?). My machine is fairly simple; I bought it almost 2 years ago and have Office and a bunch of other programs on it. 733 MHz Celron, 20 Gb hard drive, CD and CD recorder and 256 MB of ram. I only paid $254.00 for it (oh, plus $48.00 shipping) and that was in November of 2001. True, portable operation would be best served with a laptop, but what kind of laptop can you buy for that kind of money? I think as you learn you will find there is no *one* answer that fits all applications. You'll find that sometimes hardware can be more efficient than software (and vice-versa). Rethink your position.

Remember that these systems are NOT radio and so are not a protected
service.
If you have an operator trialling a system in your area make as much problem
for
his users as legally possible..... I mean operate your radio !!!
If the system generates noise at HF / VHF then a strong HF / VHF signal will
get
in to the system just as good. If it can be shown that these "Broadband
unscreened"
systems will suffer much data loss then the users will not take them up as a
preferred
option.
If you have access to spectrum analyzer / frequency monitoring equipment
connect it
up and see what you local noise level looks like (capture the data for
future reference).

and do like Dan say's get off your butt and lobby your political leaders.
Make your
voice (and signal) heard.

I bought my Toshiba Tecra Laptop off of e-bay for $330 and it has the
works - CD-ROM, Floopy, GD Battery, etc.. Great for Ham Radio -- I use
Logger, PSK31, RTTY, MMTY, CW, HamScope, DigiPan, DX Atlas, Contest
Software, RAC Callbook etc.

Speed has not been a problem with its 366 MHz processor

AND -- it is well shielded --- no RF into the rigs like many Desktops.

But I agree with Jim who sed "I think as you learn you will find there is
no *one* answer that
> fits all applications."

Tell us how it sounds in G land Martin.....I've heard some .wav files of it.
Put up some links if you know any and let the US crown hear whats on the
way.

From: Mike Coslo <mcoslo@adelphia.net>
Message-ID: <3EF4DD5C.60703@adelphia.net>
Source record: 69189

Since we're all squacking about Echolink, here is my .02 dollars.

Is Echolink High Tech?

Another way of asking the question is: Are Hams being Troglodytes by not using modes like Echolink?

Echolink is the introduction of voice into the Internet. This in itself is not a technology intensive operation. There has been audio chat rooms for many years now. The essential difference between the two is that in the Echolink version of Voip a user can access the system via a wireless interface. Even this might not be so unusual as there are probably part 15 devices that can send the users voice to the soundcard without benefit of wires.

In addition, the user can access Echolink via a microphone hooked into thier soundcard, or even type to another person with the keyboard.

So if a person was looking for a comparison between Echolink and anything else, what would that comparison be?

An internet chat room with audio immediately comes to mind.

So here you have it. It is not high-tech, it can be handled better by eliminating the radio - the weak link in the chain - from the equation, and although there are many who are just in love with chat rooms, there are also many who are not.

So my conclusion is that although there may be a place for this sort of thing in amateur radio, those who find it interesting have no business accusing those who do not like it of being technical Luddites.

.....and now you know.....the rest of the story!

Don't tell my local packet network that - we have about 35 regulars
who run packet 24/7 as I do, and use it for general chit-chat as
well as for standby communications in connection with ARES/RACES.

>Its time like for sea ships, to forbid CW on HF bands in order
>to oblige the users to get modern equipments.

What makes you think that Morse (CW) is forbidden in maritime ("sea
ships") operation? It's just not used for safety and distress
purposes any more, but it is still permitted for other purposes - if
you can find a shore station that still offers the service.

>
>Very interesting, you guys should write article about the HF circuits.

1940s technology at best.... <ggg>
>
>Were HF circuits full or half duplex?

Full duplex. The transmitting and receiving stations were
typically 50 miles or more apart and connected by microwave or
landline with a "central office", usually in the big cities.

>How many voice channels?

Standard international point-to-point radiotelephone was 4 channel
imdependent sideband - A3B, 2 channels upper side band and 2 channels
lower sideband with an order wire channel in the "hole". Busy
paths had more than one circuit. RadioFAX a.k.a. Radiophoto
occupied one voice channel.

Standard international point-to-point radiotelegraph was 4 channel
MUX - A1A, time-division-multiplex, 400 Hz frequency-shift with each
MUX channel running 7-level IRQ code at 75 baud for Telex (a dial-up
teleprinter service) or public telegraph (such as Western Union in
the US). Each of the 4 MUX channels could be further subdivided by TDM
into 4 subchannels, with corresponding lowering of speed.

In the mid-60s, Voice Frequency Telegraph - A7, audio-frequency-shift
keying, 170 Hz shift, 12 channels per voice channel, up to 4 ISB voice
channels per circuit, came into use.

>What kind of antenna did they used?

Typically 17 dB gain rhombics. Transmitters ran between 10-20 KW
and the receiving setup typically was three receivers on three
different antennas in a "space diversity" arrangement to get away
from fading. There were several frequencies which could be used for
each circuit with day, night, and seasonal changes, all coordinated
by the International Frequency Registration Board, an arm of the ITU.

International Point-to-Point stations were a ham's delight to
behold. Antenna farms that wouldn't quit. Rack after rack of
goodies. The RCA receivers of 1939 vintage gave everything that
Collins made 10-20 years later a good run for their money.
Frequently the station would be co-located with a marine public
coast station.

This was all obsoleted by the advent of undersea cables and
satellite circuits. IIRC the last International Point-to-Point
service in the US was one-way AP and UPI press transmissions by
ITT/Press Wireless from San Francisco to South America in the 1970s.

3054. Morse Code Watch

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-21 22:46:04 UTC
From: lenover21@aol.com
Message-ID: <20030621184604.18497.00000846@mb-m05.aol.com>
Source record: 69193

The following is dated 20 June 2003 at the website of the Wireless Institute of Australia - WIA Victoria under Morse code watch:

"Code issues bogs down at WRC03"

"The World Radiocommunication Conference in Geneva, has had some firm opposition to the removal of mandatory code tests for amateur licensing.

"The review of ITU RR S25 which requires Morse code proficiency tests for amateur licenses grated priveleges below 30 MHz is being strongly resisted by the former USSR states and the Arab/African group.

"WIA observer at WRC03, Keith Malcolm VK1ZKM reports that the agenda item has gone through the initial stage during which delegates make their detailed presentations on their proposals.

"The chairman of the WRC03 working group handling this item is now considering how best to handle the matter, and has a difficult task ahead of him."

--- end of quote from WIA Victoria

As of this Saturday afternoon, there doesn't seem to be much in the way of news about WRC-03 happenings...not at ARRL, not at the FCC International Bureau, and not at the ITU site (unless one is a TIES member), not from ARN...one has to go around the other side of the globe to Australia. Kudos to the VKs!

Bravo to all those 1x2s in Geneva from ARRL there as "observers" who don't seem to be able to communicate with Newington. :-)

More insulting rhetoric from the cowardly putz who is not only NOT a League member, but not even an Amateur licensee.

Guess they didn't feel compelled to send a message that says "no news yet". The WRC's NOT over yet, and promulgating stories based on half-truths and supposition would be more damaging than good.

Maybe YOU should have gotten an Amateur license, joined the League and promoted yourself as an IARU representitive, Lennie.

Then Dave Sumner and the rest cold have laughed themselves to death.

Forgot to add that the voice channels used speech inversion for
privacy.

> Standard international point-to-point radiotelegraph was 4 channel

My error - F1B, not A1A.

>Dee D. Flint, N8UZE

Nah, I've been on tons of dialup ISPs. What I meant by reliable was the bandwidth. 56k dialup
download bandwidth, at it's absolute fastest, was 3 kb/sec. So figure the upload was worse than
that. This was with the receive window optimized and the speed verified on DSLreports.com.

Piping through VoIP is troublesome with 3 kb/sec down, and worthless to try with any less, in my
varied ISP experience.

John

Phil, can you answer a question for me? I tried this direct e-mail, but it bounced back undeliverable...

Looking through some pending FCC applications I see where the FCC assigned 11 different file numbers to the SAME request from K6YT for a vanity callsign application. I've seen the same thing happen with other applications with no discernible difference between the applications themselves. Wazzup?

Just wondering.

Ham Radio is *old* >technology.

For the most part, I agree. I doubt that Amateur Radio will ever lose the 144 MHz band, due to it's large infrastructure of existing repeaters and the fact that it is the most widely utilized VHF band. I also doubt that we will "lose" our HF allocations, but we certainly will be faced with accepting whatever QRM is generated by commercial services like BPL. However, we certainly can look to lose major spectrum in the region above 500 MHz, such as the current challenges at 2.5 GHz.

Ironically, the one mode which is best suited to meet the QRM challenge on HF is good 'ole Morse/CW. However, as we lose CW-capable hams due to our aging/dying ham population, and with the impending end of Morse Code testing requirements, this capability will eventually become a lost art. Thus, the one thing that could preserve ham radio will be voluntarily abandoned by ham radio operators themselves -- all for the purpose of meeting the need to simplify licensing. Talk about your unintended consequences!

My involvement with computers since 1981 leads me to an opposite conclusion. I don't see ham radio as old technology and I don't think wireless telephones or internet voice chat poses that great a threat to ham radio (no more than online streaming video poses a threat to television). Radio is a unique technology and will continue to stand on its own. Ham radio will continue to exist right along with the rest of radio.

The July 73 magazine just came and what I read has made me think twice about joining ARRL. It has a three page story written by a former ARRL employee named John J. Phillips K2QAI and shows an ARRL that cares very little about the average ham and even less about its employees. Go read it and see what you think.

You probably right, but the information did come from the
Wireless Institute of Australia.

Here is some web links for news on WRC 2003.

Wireless Institute of Australia - WIA Victoria

http://www.wiavic.org.au/mcw/

http://www.wiavic.org.au/mcw/archive.html

IARU

http://www.iaru.org/iaru-index.html#wrc2003

I guess we need an imbedded RRAP member in Geneva. :-)

The new 5 Mhz allocation is "channelized" because the
FCC *knows* that, for 98% of the hams to to get on
this band, they will have to "cut diode D-21" or similar
to "open up" their existing japanese-made radio.

This raises a *** VERY INTERESTING ISSUE ***

When you "clip that diode" to open-up your existing tranciever
you have technically invalidated the FCC Type Acceptance
of that radio. I have had several agree, and several disagree
with this suggestion.

I have measured the spectal purity of several late-model
Icom trancievers, and in 3 out of 5, the transmitted signal
exhibited more spurious harmonics when the "wideband
transmit" was activated (after clipping D-21) than before.

Perhaps this channel-power scheme for 5 mHz was done
more for (by the FCC) reduction of (the) *potential* for
harmonic interference than anything else?

Comments welcome.

It's been floating around for a couple days.

- - - - -

Forwarded from the CW reflector, courtesy LU1DZ:

Code issues bogs down at WRC03
The World Radiocommunications Conference in Geneva, has had some firm
opposition to the removal of mandatory code tests for amateur licensing.

The review of ITU RR S25 which requires Morse code proficiency tests for
amateur licences granted privileges below 30MHz is being strongly resisted
by the the former USSR states and the Arab/African group.

WIA observer at WRC03, Keith Malcolm VK1ZKM reports that the agenda item has
gone through the initial stage during which delegates make their detailed
presentations on their proposals.

The chairman of the WRC03 working group handling this item is now
considering how best to handle the matter, and has a difficult task ahead of
him.

20th June

Alberto LU1DZ

> Why ?

Because there is very little interest in 6M compared with the HF bands
and 2M. You need to stir up more interest in 6M if it's a big deal
for you.

> If its true that 90 per cent of packet users use
> old VT100 emulators at 1200 bauds, many

> are old and do not understand how to use a
> computer to play PSK31.

Hogwash to the core.

I'm older than dirt and I have a big Winbox with six drives, 256 Mb
worth of RAM, a GE Force 4 video card w/64 Mb RAM, 19" high-res flat
NEC monitor, yadda, yadda. And if I choose to do so with my current
equipment I can run CW, SSB, PSK, FM, AM, RTTY and all the others 160M
thru 70 cm. And I'm at the low end as far as the investment in a
contesting/dxing station is concerned.

> Its stone age
> although PSK31 is 10 dB better than CW.

We all know that. PSK is not in competion with CW on any basis,
particularly in "stone age" CW contesting/dxing any more than PSK is
in competition with SSB.

> More, there is a money reason explaining that
> PSK31 is not used. It requires a portable computer
> (for portable/contest operation)

Where did you get that silly notion? Most serious contesters & dxers
use 'puters in tower cases and operate parked on their arses at their
home stations.

> that must have a

There's another whole dimension to the BPL thing. Gurus within the
power gen biz are saying that the cost of implementing BPL is
astronomical and that it would take ten years after broadscale
implementation to get the first positive ROI on the required
investment. The Achilles heel of BPL lies in the need to install
pricey black boxes across every power transformer in the system to
pass the RF around those xfmrs, i.e., on every pole pig on your
street. Then comes the maintenace . .

Show me an investor with deep enough pockets to fund BPL given this
reality who is also willing to wait ten years for a payback and I'll
show you either a nutcase or the whole scheme was stillborn from the
gitgo.

Who knows what the cable and light pipe guys will have come up with
ten years hence which will drive their stakes even further into BPL?

> Besides if the FCC took away 144 and 222 they

Newbie.

The same general BS was floated around in the early '50's when Novices
got HF privs with a weenie 5 wpm test. Then came Incentive Licensing.
The sky did not fall on ham radio then either.

Huh?

There is no type acceptance on amateur equipment.

You operate equipment on an amateur band, and it's allowed.
You do have to fulfill certain standards, but that's the
operator's responsibility and has nothing to do with the manufacturer.

If you operate out of band, it likely isn't allowed because the
other service requires that equipment be type accepted. Since amateur
equipment isn't type accepted in the first place, for amateur or
other use, then it will be breaking the rules.

However, the band, or channels, under discussion is an amateur band, albeit with a few specific standards added in. Anything that will fit the standards will work there, and it needs absolutely no type acceptance.

> coders will be (at least) smashed by the new ham
> mass on the HF bands.

I see. "Today CW; tomorrow, the world!" or something like that, huh?

> In quite all civilized countries, there is about one
> half of ham operators that are technicians.

I'm sure there are a number of countries which will be disappointed in
not making your "civilized countries" list.

> Think
> that the amount of DXers on HF will increase on
> that bands soon with the abolishment of CW.

What is going to turn these guys into instant DXers? How is this
"abolishment" of CW to take place?

> Most of hams have a bad antenna system.

From where do you obtain your facts?

> 2 kW are not necessary to make a QSO.

It might well be if 1.9 KW can't get the job done.

> You can get
> a low SWR, but poor radiation of the power if
> your antenna acts like a resistor.

There aren't many guys running T2FD's.

> Its not necessary to make a QSO with 59+60dB
> reports.

If the noise is 59+55 db, it might well be necessary.

> 56 is sufficient considering the QRN.

I don't think you've considered QRN enough. Is it Summer where you are?

> So, please stop using kW amplifiers (you generate
> splatters, harmonics, etc ... on the bands)...

Please explain how KW amplifiers by and of themselves necessarily
produce "splatters" or harmonics.

> and use
> digital modes with low RF power.

My regs permit a variety of modes and a great deal of power.

> Remember that
> HF bands are international and that you must
> SHARE them with hams of other countries.

Not just the "civilized countries"?

Hams all over the world ARE using morse at any given moment of the day.

Gee, Len, you've just given us another history lesson in which you write
of PSK-31 using "a very narrow bandwidth" and then you begin to spout
about entrenched narrowbanders. I just looked around the old narrow
trench. I see morse ops and I see PSK-31 ops but I don't see you.
Please try to elucidate on how PSK-31 coding seems alien to those who
are already hams.

> They don't understand it, don't

I'm sure that digital voice will really take off for SW broadcasters as soon as Brute Force Cybernetics (the company which creates a need and then fills it) figures a way to get all those third world listeners $29 receivers capable of receiving digital voice signals.

As to the rest of your paragraph's claims, my receiver can't demodulate it so I'll just dismiss it as some kind of noise.

Just get the folks at Brute Force Cybernetics involved, Leonard. As soon as they convince hams that they need such devices, they'll take off. That should take place about the same time you become a participant in amateur radio.

> will remain after that happens?

None on our side of either pond. It's all uphill. The dx will by far
be the huge beneficiaries which is as it should be. Having a lot more
space to work each other and themselves is the one huge overriding
benefit of the overall effort to harmonize 40.

As far as the ssb transceive thing goes I expect that Alun & Co. will
be better able to snipe a new one here and there but not to the extent
I sense he expects. Band condx on 40 rule much more so than on 20 for
instance and the dx will be much more able to shrug off The Hordes
many more hours per day than they can on 20. When The Hordes do have
openings and become nuisances the dx will simply drop back down into
their age-old sheltered spaces and carry on and nothing will change in
this respect.

Actually I 'druther Alun's dream would come true. Us beepers might
finally get the damned spazzy Donald Ducks outta *OUR* 7.000-7.100 . .

.

RADIO LAW: HAMS PETITION TO OUTLAW HI-FI SSB

On-air experimentation with so-called High Fidelity or Enhanced Single Sideband transmissions could be outlawed if thr FCC adopts a proposed rules change requested by two radio amateurs on opposite sides of the country. Amateur Radio Newsline's Paul Courson, WA3VJB, reports from the nations capital:

--

A petition for rulemaking was sent to the FCC and accepted by the agency May 27th. It was not immediately issued a Rulemaking Number so it was hard to find in the public record. However, Newsline has talked with two sources who have seen the proposal, and it calls for what many would consider severe bandwidth limitations on HF phone.

The petition asks for a federally mandated bandwidth limit of 2.8 kilohertz for SSB, well below the extended bandwidth needed for what has been called enhanced audio.

One of the two hams who submitted the petition told the FCC they are motivated by interference problems caused by two groups of single sideband operators. These groups are portrayed by the petitioners as, in both cases, having cast aside traditional voluntary limits on bandwidth of roughly three kilohertz. The petition therefore asks that these voluntary limits be made mandatory to provide a clear enforcement mechanism for regulators.

The petitioners, Michael Lonneke WØYR of Virginia, and Melvin Ladisky W6FDR of California, said hams from one of the groups come on during radio contests, and are found tweaking their transmitters to splatter purposely to provide elbowroom on a very crowded band. The two men characterize the other group as those who experiment with high-fidelity audio, apparently trying to replicate the sound of FM Broadcast stations.

Newsline has recently reported on advisory letters sent out by FCC Enforcement Counsel Riley Hollingsworth, K4ZDH, who wrote to several members of the enhanced SSB group telling them the agency had received interference complaints. The letters did not validate nor dispute the complaints, but warned the stations that if such complaints continued, the unresolved friction could trigger petitions for rulemaking. One such petition is now at hand.

A Newsline reporter spoke with Lonneke, who declined to provide a copy of his petition for this report. He said he and Ladisky hold the same views on the matter of excessive bandwidth causing interference, and that they teamed up on the petition to add strength to their call for regulatory intervention. Lonneke declined further comment, and said the petition will speak for itself if the FCC chooses to assign it a rulemaking number and put it to public comment.

Members of the enhanced SSB group have told Newsline they believe their experimentation with improved audio is totally in line with the spirit of ham radio, and thet when conducted under appropriate conditions, is every bit as justified in bandwidth consumption as any other spectrum-intensive activity, including contesting. But the FCC's Hollingsworth, reacting to such comments, disagreed, suggesting the mode of SSB was commissioned for the amateur service as a spectrum conservation mode, counter to the idea of high-fidelity audio and the bandwidth it requires.

Hollingsworth could not be reached to comment on the proposed Petition, and another FCC official declined to comment.

The petition also mentions the legacy mode of AM, and said it, quote, does not create the same problems that the burgeoning use of so-called 'Hi-Fi Single Sideband' creates. Nonetheless, the petition asks the FCC to impose a 5.6 kilohertz bandwith limitation on AM, with the restrictions asked for on all HF allocations below 28.8 megahertz.

Previous regulatory proposals based on bandwidth have failed, including Docket 20777 from the mid 1970s. The conclusion then was that having loosely-defined technical standards allowed the greatest range of experimentation in ham radio, as long as such signals are clean. Indeed, many present-day violations of splatter, overdriven amplifiers, and poorly administered audio lashups can already trigger enforcement action under existing FCC rules governing the purity of signal.

Reporting for Newsline, Paul Courson, WA3VJB, in Washington

--

As we go to air, the ten page petition by W0YR and W6FDR has not been been assigned a Rule Making number designation. More on this story in future amateur Radio Newsline reports. (ARNewsline™, W5YI)

**

ON THE AIR: PERTH HAMS JAMMED OFF 2.4 GHZ

A cloud of radio frequency interference has settled in on the 2 point 4 Gigahertz in the city of Perth Australia. For many hams it is making satellite operations impossible. Felix Scerri, VK4FUQ, reports from the city

of Ingham – down under:

--
You may not hear many VK6 hams on AO40 for a while. Many are suffering from interference from some form of wide band data transmission centred on 2.4GHz. The signal covers much of the Perth metro area and is very strong. So strong in fact that it does not matter where you beam you can still hear it - mainly from reflections.

The signal, which runs continuously, sounds like a 100Hz buzzing sound and has a bandwidth of about MHz. Looking at the signal on a spectrum analyzer it has a flat top and very steep sides. The signal started about 6 weeks ago and one suggestion is that it might be an image response of S band down converters to the 2.1GHz G3 mobile phone service that have just started tests.

--

At airtime, the interference is still there and hams in Perth are wondering what to do to make the problem, go away. (Q-News)

**

WRC 2003: AN UPDATE

Radio regulators from around the world are still gathered in Geneva Switzerland trying to work out numerous spectrum issues including some dealing with Amateur Radio. Q-News Graham Kemp, VK4BB, is here with the latest:

--

The International Telecommunication Union's 2003 World Radiocommunication Conference got under way June 9th in Geneva Switzerland. Amateur Radio is only a small part of the conference which is trying to complete work on more than 40 agenda items.

Amateur Radio is but a small part of the conference, which is trying to complete work on more than 40 agenda items. Three are especially important to us: realignment of 7 MHz allocations (agenda item 1.23), revision of the regulations governing the amateur and amateur-satellite services (agenda item 1.7), and consideration of an allocation for satellite-borne synthetic aperture radars (SARs) in the 70-cm band (agenda item 1.38).

Two other agenda items that could potentially have a great impact are the drafting of an agenda for the next WRC scheduled for 2007 (agenda item 7.2) and the revision of footnotes to the Table of Frequency Allocations (agenda item 1.1). A member of the IARU core team has been assigned to follow each of these five items, with the most focus being on 7 MHz.

It is the intention of the IARU core team to send timely and accurate reports of final decisions reached on Amateur Radio issues. It is important to remember that nothing is final until the second reading of a document in the Plenary, which in the case of controversial issues
will not take place until the final week of the conference, 30 June to 4 July.

--

Look for up to date briefings on the ARRL website at www.arrl.org and weekly summaries here on Amateur Radio Newsline. (ARRL, Q-News)

IN THE MEDIA: HAM RADIO HIGHLIGHTED ON WBUR RADIO

Ham radio was the featured guest when WBUR radio in Boston Massachusettes devoted its show titled "The Connection" to the hobby on Thursday, June 12th. Hosted by Dick Gordon, the show's theme was that ham radio is alive and vital with close to two-and-a-half million hams world wide still consider ham radio their preferred way to fly.

The program was also centered around the new book titled "Hello World: A Life in Ham Radio" by Danny Gregory and Paul Sahre. A book based on the collection of QSL cards of silent key W2OJW. And while neither of the authors was there, Bob Hopkins, WB2UDC was. Hoskins is Director of the Computer Center at Cooper Union University in New York and played a key role in the books development:

--

Hopkins: "Hello World is a wonderful book, and where I work over at Cooper Union I have collegues that do many things. We have an engineering school, an art school and an arcetecture school. Because of the archecture aspect, a collegue of mine who works at the Princeton Archecture Press as well as Cooper Union contacted me and said that he had a couple of friends who were thinking of putting together a book on ham radio post cards and wanted to do the graphic design and would I be interested in having a conversation with them. I said -- oh sure -- fine -- bring them in. These guys came in with these fabulous cards dating back to 1927 up to the present."

--

Also appearing on the program were were Moody Law, WQ6I in Claremont California, Joe Leto, W0ANT from Ankeny Iowa, and Harry Han, BG4AGY, in Shanghai. Each spoke on the way ham radio has affected their personal lives and those around them.

Even though its well over a week since the perogram aired, it is archived as a Real Audio stream at the WBUR website. To hear it take your web browser to http://www.theconnection.org/shows/2003/06/20030612_b_main.asp

Our thanks to Daron Manoogian who is the Manager of National Program Marketing at WBUR for permission to use the audio you heard in this report. (K1TW)

**

RADIO LAW: NY HAM CITED UNDER STATE SCANNER LAW

A New York ham has been cited for having radio gear in his car even though the state law governing scanner radios exempts licensed Amateur Radio operators. On May 31st Richard C. Lalone II, KC5GAX, of Calcium, says that he was stopped while driving well under the posted speed limit by a New York State Trooper and given a ticket for having Icom IC 1500 and IC 706 radios in his vehicle.

Lalone says via the qrz.com website that he did try to explain that that he was an Amateur Radio Operator and even provided his Amateur license for the officer’s review. Apparently, this was not good enough and the ticket was issued.

Lalone appeared in court on June 10th to answer the summons. At that time he approached the judge with both his license and a copy of New York Traffic Law 397 a copy of PR Docket 91-36. But the Court Recorder immediately took the documentation from the judge and returned it to KC5GAX. The judge then conferred with the Court Recorder after which he told Lalone that he was entering a plea of innocent for him. He then instructed Lalone to seek an attorney and be present in court July 9th. They court then offered KC5GAX paperwork to obtain a public defender, and returned the citation with the new court date.

Its not clear as to what will transpire on July 9th. Lalone’s posting did not state if this was a trial date or other type of preliminary hearing. If he is convicted of violating New York’s scanner control law Lalone faces a fine of $1000, 6 months in jail, or both. (W6EM, qrz.com)

**

ENFORCEMENT: FCC WRITES PART 15 DEVICE USERS ABOUT ALLEGED INTERFERENCE TO AMATEUR RADIO

Turning to enforcement issues, the FCC has written two Northern Virginia residents to follow up on complaints from a local amateur. A ham who alleges that he's on the receiving end of harmful interference from telephone devices with the capability to support multiple cordless remotes. Amateur Radio Newsline’s Bill Pasternak, WA6ITF, has more:

--

According to the ARRL Letter both units interfereing with Bernie Keiser, W4SW, of Vienna, Virginia, are unlicensed Part 15 consumer electronics made by a well-known manufacturer. In separate June 2nd letters to the two users, the FCC’s Sharon Bowers pointed out that if their units are the cause of harmful interference to a licensed spectrum user, they are responsible for solving the problem. Also, that the operator of the device is responsible for correcting the interference or ceasing operation whenever such interference occurs.

Bowers is the deputy chief of the Consumer Inquiries and Complaint Division of the FCC's Consumer and Governmental Affairs Bureau. She explained in her letters that the equipment was classified as an intentional radiator and noted that harmful interference to a licensed radio service from such a device is a violation of FCC rules. She advised the consumers that the alleged harmful interference must be corrected before they may use the devices legally. She suggested they contact the manufacturer or retailer of the equipment to see if they'd either allow them to return them or exchange them for devices that don't cause interference.

The interference to W4SW’s ham radio operation took the form of broadband noise from 2400 to 2450 Mhz. This made it it difficult for him to hear the AO-40 downlink and beacon in the 2.4 Ghz band.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

The complaints against the two Vienna Virginia consumers represent a bit of a turnabout from the typical interference scenario. Usually its the ham who generates complaints of RFI to consumer electronic gear and hears from the FCC. (ARRL)

**

ENFORCEMENT: HAM ACCUSED OF FALSE DISTRESS CALLS ORDERED OFF THE AIR

A California ham has lost his right to operate an Amateur Radio station. This, based on allegations by the FCC that he may have been the source of a number of phony distress calls made by radio.

On June 3rd the agency’s Riley Hollingsworth notified Michael V. Swift, the now former KG6QOB to inform him that his license had been cancelled. This, based on evidence that the San Ramon ham had made numerous false distress calls on Marine Channels 16 and 22A.

In his letter Hollingsworth said that in view of the agency’s action that Swift no longer has authority to operate Amateur Radio transmitting equipment. He also warned that any continued on-air operation by Swift could lead to a fine or criminal prosecution. (FCC, RAIN)

**

SPECTRUM REALLOCATION: FCC PROPOSES UNLICENSED DEVICES IN THE 5 GHZ BAND

Still with regulatory matters, the FCC has proposed making 5.47 to 5.725 Gigahertz available to National Information Infrastructure devices, including Radio Local Area Networks, on an unlicensed basis. If adopted, this plan will increase the spectrum available to license-free devices in the 5 GHz region by nearly 80%.

The complete story is on the web at the FCC’s website. A direct link to it is http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-110A1.doc (CGC)

**

WITH THE HANDI HAMS: NEW BLIND FRIENDLY WEB THEME FOR WWW.HANDIHAM.ORG

Phil Temples, K9HI, has created a blind-friendly theme for the Handi Ham System website. The reorganized site eliminates the complicated page structure that works well for sighted users but was difficult for blind users employing audio programs like JAWS or Window-Eyes to navigate. To take advantage of the new navigation system visit www.handiham.org and choose the "Courage" theme for easy blind navigation. (HandiHams)

**

NAMES IN THE NEWS: WA8SME NEW COORDINATOR OF ARRL'S "THE BIG PROJECT"

Mark Spencer, WA8SME, has joined the ARRL Headquarters staff as the new coordinator of the ARRL Amateur Radio Education and Technology program. That program is better known in ham radio circles "The Big Project." Spencer succeeds Jerry Hill, KH6HU, who has returned to Hawaii. (ARRL)

**

FOR YOUR READING PLEASURE: HEATHKIT - A GUIDE TO THE AMATEUR RADIO PRODUCTS

If you've ever owned a piece of Heathkit amateur radio gear, or wish you had, the Second Edition of Heathkit - A Guide to the Amateur Radio Products, by Chuck Penson, WA7ZZE, is a must for your library. Greatly expanded and updated, this 328-page collection of facts, photos and Heathkit history offers a terrific trip down memory lane for anyone who has built or has owned Heathkit gear. Its published by CQ and available for order on-line at www.cq-amateur-radio.com or by phone at 1-800-853-9797 Monday to Friday from 9 a.m to 5 p.m. Eastern U-S. time. (CQ)

**

EMERGING TECHNOLOGY: THE TRUE UNIVERSAL REMOTE

A true universal remote unit that will literally help to control your entire lifestyle is now under development. Researchers on the project say that the all-in-one controller that would choreograph not just home entertainment systems but also intelligent appliances all around the house.

Maya Designs Inc. in cooperation with Pennsylvania’s Carnegie Mellon University has created a prototype based on a Compaq iPAQ portable digital assistant. The experimental handheld has so far been used to control two lamps, a fan and a stereo with a five-CD changer. Researchers say that more is on the way once standardization of remote control codes for various appliances

is achieved.

The Consumer Electronics Association is working on this aspect of the problem. It estimates the average household has at least four remote control units. It also understand why the consumer electronics industry considers a universal remote an important device for the marketplace. (Science Today)

**

RADIO AND SPACE: MOUNTAIN PEAK NAMED IN HONOR OF ILL FATED COLUMBIA CREW

A Colorado mountain peak has been named Columbia Point. This, in honor of the seven astronauts who died when the space shuttle Columbia broke up over Texas on Februay 1st.

The peak on Kit Carson Mountain in the Sangre de Cristo Range near Colorado Springs is close to the 14,081-foot Challenger Point. That peak was named in honor of the seven crew members who died in the Challenger space shuttle explosion in 1986. The newly cvhristened Columbia Point also is roughly 14,000 feet. (ANS)

**

INTERNATIONAL - EUROPE: PMR446 MEANS FUN

From a listener in Europe comes word of a new communications network called PMR446. This is a licence free 500 milliwatt personal mobile radio service that is quite similar to the United States Family Radio Service with one big difference. The pan-Eueropean service permits is users to connect their radio gear to the Internet using personal computers and software interfaces. The software of choice is eQSO and with it Eueropean experimenters have created a network of linked rf-gateways.

On the R-F side, the radio gear is limited to flea power and built-in antennas, but thanks to gateway linking PMR 446 is quickly developing into quite a hobby thats bringinging together hams and non hams alike. In fact, it even has its own home in cyberspace at www.446user.co.uk. Drop by and have a look at what’s happening on the other side of the Atlantic. (PMR446 Users Group)

**

INTERNATIONAL - HOLLAND: RADIO NETHERLANDS TARGETED BY PUBLIC BROADCASTER

Radio Netherlands management have reacted angrily to a recent edition of the Dutch domestic current affairs TV programme Nova. A story reported on Nova said that drastic budget cuts of up to 85% was in the offering for Radio Netherlands, and as a result everything except broadcasts to the Netherlands Antilles and Surinam would be scrapped.

According to Radio Netherlands, the erroneous item was based on a leaked copy of a report into the efficiency of public broadcasting that was jointly commissioned by the Dutch Ministry of Culture and the broadcasters themselves. Nova seized on one section of the report and interviewed a representative of the Dutch Association of Journalists, who said this would effectively mean the

end of Radio Netherlands.

But Radio Netherlands says that the report was not a call to action. Rather, its purpose of the report was to identify multiple scenarios where cost savings could be made. The example quoted by Nova was just one. The Hilversum based station also noted that decisions on the mission of Radio Netherlands are made by politicians in The Hague, not by other public broadcasters or the authors of a commissioned report. (Media Network)

**

ON THE AIR: MUSEUM SHIPS 2003

On the air, K3CLG says that the 2003 Museum Ships Weekend special event stations will be held on the weekend July 19th and 20th. Operations will encompass all modes including phone, C-W, PSK-31, APRS and even contacts via the Internet Radio Linking Project or IRLP. You can check on all the details at this easy to copy URL. Its all at www.qsl.net/ww2dd/event.html (K3CLG)

**

DX

In D-X, word that SM3CVM, plans to be on as portable CU2 from Sao Miguel in the Azores through July 6th. Activity will be mainly CW on 80 through 10 meters. This will be a holiday operation, so he will mostly be active late evenings local time. QSL to his home callsign via the bureau or direct to his callbook address. (GB2RS)

Also V31MX and V-31-M-F will be active from Caye Caulker from July 23rd until noon of July 29th. They will operate on 80 through 10 meters SSB with some CW activity. QSL both callsign via KZBCN, either direct or via the bureau. (OPDX)

**

THAT FINAL ITEM: N6ZE’S CROSS-COUNTRY ROVING ODYSSEY

And finally this week, the story of Peter Heins, N6ZE, who may now hold the record for a QRP Rover in the June ARRL VHF QSO Party. In less than two days, Pete managed to rove coast-to-coast, from Grid Square FN-20 to CN-87. Thats a distance of 2754 miles and he operated 6 and 2 meter SSB from each location. Here’s how he did it.

From 1400 to 14:45 E-D-T on Saturday June 14th, Pete was on the air from park bench overlooking Hudson River at Weehawken New Jersey. From there he even managed to work a station in grid EL-86 thru the tremendous E skip that was present at the time.

A bit more operating from a hotel room in midtown Manhattan followed until 15:30 Eastern Daylight Time. Then a quick drive out to the airport where Pete, who is a commercial airline pilot, traded his ham radio microphone and key for the co-pilots seat of a Boeing jetliner. He then spent the next several hours flying to Salt Lake City Utah.

During the layover, Pete rented a car, unpacked his FT-690 and IC-202 and took to the airwaves. From 8:45 to 15:30 Mountain Daylight Time hN-6-Zed-E roved through Grids DN30, 31, 40 and 41 operating both 6 and 2 meters.

He then repacked the gear, got back in the plane and flew it another 689 miles on to Seattle. Thanks to another hours time change, Pete was back on the air around 19:52 Pacific Daylight Time in Grid CN-87 from the airport ramp making two QSO’s. His last contact took place at 19:59 Pacific Daylight Tine. That was just 1 minute before end of contest.

His totals for the contest period: On 6 meters he had 16 QSO’s, 16 QSO points and 8 multipliers. 2 meters yielded 24 QSO’s, 24 QSO points and 9 multipliers for a grand total of 960 points.

In his posting to the VHF Reflector, Pete put out a special thank you to the hams in the Salt Lake City area who provided lots of information for operating sites in 4 grids that helped to make his cross country VHF roving odyssey, complete. (ARNewsline™, N6ZE)

Add to that the decrease in QRM from SWBC making 7100-7300 much more usable when inter-region paths are open, and the need for 5 MHz really decreases.

By the time I was involved (74/75),
HF was not being used at all (or for only a ver few
locations) from the USA. I was in a NYC operator center
and had day-to-day responsibilities for the operator
services themselves. The circuits were maintaiuned by
a different organization of technicians.

Some of the connections may have used HF at
the foriegn end, but the USA to the other continent was all cable.

Cheers,
Bill K2UNK

As do I. Additionally, we have heard the conspiracy theories
for over 10 years now and other than the totally underused 220MHz
loss, ham radio has not had any other frequencies so threatened.
The track record of frequency losses is contrary to the doomsday
presictions of Fritz, et al.

That doesn't mean hams can or should be compalaent...as we
can look to the 220 loss as to what can/could happen if WE
don't stay active and proactive in using our
valuable freuency resources.

Cheers,
Bill K2UNK

There is in the U.S. Every catalog piece of ham gear I've bought since
whenever has an FCC type acceptance tag on the rear panel. Except in
the cases of one-off sales of hombrewed and/or modified ham gear it's
illegal to sell any device which transmits RF unless it's been thru
the FCC type acceptance process. However once in hand hams can do
whatever they want as far as mods are concerned.

Gotta love it.

The Russians are really adamant about retaining s25.5 or some
variation of it. It's not too hard to shrug off the clout of some of
the small states like the Balkans but the Russians & Saudis do not
take kindly to being shrugged off and are quite capable of upsetting
dipolomatic apple carts. Nobody has heard from Red China yet either .
. there's another 900 pound gorilla which is not into giveaways and
making life easy for anybody.

There are no surprises in any of it, none of it is new news. All of it
has been available for eons via the various dx, contesting and cw
reflectors.

Exactly.

Anything that appears in the pages of "73" other than purely technical or operating articles is subject to that LARGE "grain of salt" acceptance.

Wayne Green has been worthless to Amatuer Radio since the 70's and he is even more worthless today, and his hatred (despite flaunting his "life membership") is well known.

Once upon a time, Wayne could have said "Send Me Your Money And An Association I Will Make" and people would have done it. He's one of those who whines and fusses about what he doesn't like, yet has no desire or plan to fix it.

I got into an exchange of letters with him in 1979, and again in 1994. Both times after particularly stinging "editorials" of the League in "73", and both times after urging him to "do something" about it.

Wayne's lame and snivvling answer was that "I am only interested in spawning the creativity of others to action". In other words, all he wanted to do was complain. He is his own worst enemy. He's a loser.

Sound like someone else we know...?!?!

Isn't this Phillips guy the one that 'handled' the RFI department? If my memory serves me correct. He did a piss poor job in that department in my opinion. I 'tried' to deal with him on various occassions about my power line noise. Let me say the result was less than I expected.

Ain't been an even half decent HF xcvr built since ancient days which
doesn't do A/B switching going back to the S-lines & Drakes. Two
complete *independent* rcvrs a la the Icom Pros, FT-1000s, Orion, etc.

> Add to that the decrease in QRM from SWBC making 7100-7300 much more usable

Don't quite agree with that. 5 Mhz has it's own unique propagation
characteristics which make it ideal for HF comms inside our borders.
Provides longer legs than 75 during the day and shorter legs than 40
at night.

Hey Brian, go read FCC Rules Part 2 Subpart J (which deals with the
Equipment Authorization program), Part 15 (which deals with RF
Devices) and Part 97 (which deals with the Amateur Radio Services)
and show us where "type acceptance" or its successor - Certification
- is required for any HF amateur equipment but 10-meter amplfiers.
Do not confuse receiver certification (required for vhf and higher
receivers) with type acceptance / certification of transmitters.

"Cutting the diode" and operating on a frequency not authorized for
amateur operators is a different matter - unlicensed operation
and/or operating non-certified equipment when certifcation is
required.

Ham radio HF transceivers are not required toi be "type accepted".
Have you found a Type Acceptance label on yours?

>Perhaps this channel-power scheme for 5 mHz was done
>more for (by the FCC) reduction of (the) *potential* for

It was done because the "owner" of those channels - the NTIA -
insisted on it for uniformity with other users of those channels.

Which raises a question about how these WRCs decide revisions to existing treaty sections like S25.5. Is it by simple majority, 2/3 majority, consensus of all, or what? And if they can't reach an agreement on a revision by the closing date, doesn't the old section stay in effect?

Whew. Jim, I never sent well with a Vibroplex. I ended up using an HA1-TO keyer (back when). I like my CW to be indistinguishable from machine sent, and never could send decent CW above about 25 on a straight key nor CW at any speed on a Vibroplex :)

By the "book" it's 51% majority but from a practical standpoint it's
by consensus if at all possible. That's where the "horsetrading"
comes in. Or so I was briefed for the one ITU Conference that I was
supposed to attend but never did because the Six Day War (1967) had
me otherwise occupied.

And if they can't reach an agreement on a revision by the
>closing date, doesn't the old section stay in effect?

Yes, the existing provision continues.

> There is NO issue there.

Icom announced the upcoming availability of their new top-end IC-7800
xcvr at Dayton a few weeks ago. Universal Radio (ham & SWL equipment
distributor)is advertising it in their website. Dial into:

http://www.universal-radio.com/catalog/hamhf/0041.html

Note that the ad includes this caveat in red print:

"NOTICE: This device has not been approved by the Federal
Communications Commission. This device may not be sold or leased, or
be offered for sale or lease, until approval of the F.C.C. has been
obtained."

Looks to me like type acceptance is required. Or is there some other
flavor of FCC approval?

Yes he was, he worked for Ed Hare the League lab manager, RFI/EMI guru
and author of the ARRL tome on RFI/EMI. Phillips held the title "RFI
Engineer" or some such.

Amateur RECEIVERS, including the ones in transceivers, are required to be
Part 15 certified to not cause interference with other devices, as do all
receivers. The transmitter section does not require certification per Part
97.

>flavor of FCC approval?

Yes there is. Type acceptance as we knew it is no longer in
existence. The equipment authorization processes are now
"certification" which requires submission to the FCC of test
measurements of compliance with applicable Rule sections
(essentially the same as type-acceptance was), "Declaration of
Conformity" which is the same as "certification" but the tests are
made by an authorized private-sector testing facility and not
submitted to the FCC, and "verification" which requires no
submission to the FCC but merely a statement by the manufacturer of
compliance with the limits set forth in Part 15 of the Rules.

If thr above transceiver has receiver capability above 30 MHz,
and/or a computer processor, it would have to be certified for rf
noise emission to Part 15 standards. That's what is probably pending.

Or alternatively, the manufacturer could have applied for
certification of the transmitter in services other than amateur but
that's doubtful.

True enough, but for hams, things are not so clear. Hams are allowed to operate with equipment lacking all type-acceptance, AFAIK the only radio service that is.

> I have measured the spectal purity of several late-model Icom
> trancievers, and in 3 out of 5, the transmitted signal exhibited more

> clipping D-21) than before.

Not sure what you mean. Does the purity degrade on the old frequencies? That would be a puzzler. As far as purity not being as good on newly-opened frequencies, I guess there's no output filter exactly right for the new frequencies, particularly ones (like 5 MHz) far removed from any previous ham band that the original designers would have worried about.

> Perhaps this channel-power scheme for 5 mHz was done more for (by the
> FCC) reduction of (the) *potential* for harmonic interference than
> anything else?

Maybe the FCC is just learning from mistakes. They limited 30 Meters to 200 watts, IIRC. Put up an antenna with 7dB gain, and you're legally running 1kW ERP, the very thing they didn't want done. So maybe they're writing the specs to avoid that this time.

As for channelization, I think this is the way they "sold" band-sharing to the other users, particularly the military. I have a suspicion the requirement for SSB voice-only also came from those other users, who wanted all potential interference to be in a mode their receivers & brains could follow & understand.

I don't see anything sinister, just a bunch of well-organized, smoothly-cooperating channelized users expecting the "new guys" (hams) to play by long-established house rules.

As I (mis)understand it, you only need type acceptance if you
manufacture more than
5 copies of something that transmits in a year. Or modify more than 5
of something
in a year. Thus you cannot sell lots of "modified" linears capable of
generating power
on 10m to "hams" or anybody else (freebanders).

5 will be a different style of band from what we're used to. But I see
no reason that hams
won't be able to learn the "rules" of 5.

IIRC, originally the threat was that 220 would be completely lost.

>The track record of frequency losses is contrary to the doomsday
>presictions of Fritz, et al.

This is a different game. The PLC folks aren't asking for any spectrum at all.
They just want the Part 15 levels raised. Trouble is, the Part 15 levels are
already too high.

Note that PLC's competitors (DSL, cable modem) didn't get higher Part 15
levels.

>That doesn't mean hams can or should be compalaent...as we
>can look to the 220 loss as to what can/could happen if WE
>don't stay active and proactive in using our

And letting FCC know the whole PLC thing is a bad idea.

Most populated areas I know of have at least one option besides dialup -
usually DSL or cable. Many have both. There are other options available or on
the way, too. Will PLC be faster or cheaper?

No it will be 'easier' to get into EVERY SINGLE persons house. Thus cheaper
FOR THE PROVIDER. And the provider will be your local power company.
Remember power line noise, and the years it takes to get it fixed???

Bet it wont do a damn thing to reduce the cost to the customer. Not to
mention destroying HF and most of VHF with its splatter and harmonics.

When did you argue a case before the Supreme Court of the USA,
Phil?

Unless there's been some kind of secret revolution in the USA, all
of us citizens of the USA can exercise our Constitutional rights on
free speech and free assembly and petitioning of our government.

When did "brain surgery" become a part of this thread? Or are you
doing non-physical-invasive surgery like the ARRL does? :-)

I am "reluctant" to continue any more "inductive" reasoning... :-)

That "Six Day War" was 36 years ago, Phil. I'm sure that Geneva
and environs have changed somewhat since then. Ask the ARRL
"Team" what's happening in Geneva...they are "on the job, poised,
ready to work" (etc.). :-)

That would cause Switzerland to change from a neutral
country to an aggressive, biased one. :-)

I can't wait for the detailed, up-to-the-minute reports of what
is going down at WRC from the hardy ARRL "team" at work
there. I would guess that Executive President (for life) Sumner
doesn't have any petty cash left for a call home to Newington.

Maybe it was all used up in hydrating everyone during the
"unusually warm weather" around the "top floor" of the ITU
building during the "battles" of the second week?.

>
>20th June
>
>Alberto LU1DZ

Does this "Alberto" post to WIA Victoria or is he, like yourself, just copying from them verbatim? I say he is just copying...that ANYONE could do TWO DAYS ago from WIA.

Where is the "news" of WRC-03 at ARRL website? Or the IARU sub-page, managed by ARRL Executive President (for life) Sumner? Sumner is supposed to be IN Geneva. It's now been two weeks since WRC-03 got under way and there is NOTHING but a lot of gabble of generalities coming from the "team" in Switzerland. Here's what the "latest news" excerpt was 6 days ago from the "team" leader:

"Coming up: In Week Two we expect the real battles to begin on 7 MHz, Article 25, and 70 cm SARs. To help build support the IARU is hosting a reception on Wednesday evening for about 150 of the key delegates. The participants' list was reviewed and invitations addressed over the weekend with assistance from Linda Sumner, KA1ZD. Of course, we could not invite everyone we would have liked to; the room where are holding the reception, on the top floor of the ITU Tower, will not hold them all. We hope those we could not accommodate will understand our difficulty.

"We also hope to see a change in the unusually warm weather here in Geneva!"

That was posted on 16 June, halfway into the second week of WRC-03, and there is nothing additional now, on the 22nd, at either the IARU or ARRL websites. Maybe there was too much strain about the "top floor" or the "unusually warm weather" to actually report NEWS about the second week's "battles?" No doubt, no doubt. Your "team" in action...

So why then is most all every piece of new-on-the-market gear always initially advertised with the caveat "pending FCC certification" when it doesn't already have it? I recall seeing that several times in the ham mags. Why is such a notice needed if no FCC certification or approval (same thing) is required?

On the contrary, either there will be no change, or 7000-7200 will be
worldwide (with or without 7200-7300 at a later date), or all of 7000-
7300. No other proposals are on the table, and none of the proposals
affect CW subbands in any way.

None of the proposals affect the so-called 'DX refuge' which will remain
at least 7050-7100 everywhere no matter what happens. Ergo, you are
talking utter garbage.

Yes, you're mistaken, I only want to go down to 7.045, as per IARU recommendations for regions 1 and 2 (it's 7.030 for region 3), and I have never asked even for that, as I know we won't get it. In the earlier thread I only suggested SSB down to 7.075, which is what US licenced hams in region 3 already have.

> any speed on a Vibroplex :)

Neither can anybody else . . wishful thinking to the contrary.

Bug swings are *not* beautiful things although much to their credit
they absolutely will drive CW decoders outta their weenie little
digicrap minds.

I'd already given up straight keys as too much work before I even took
the test and went into the 80M Novice band with my WW2 surplus ARC-5
TX (from a 1943/44 24vdc Willys Jeep Euro Theatre Turbo GT Edition)
with a beat-to-crap bug of unknown parentage. I took said bug to the
FCC office to take my General sending test. Examiner rolled his eyes
upward when I whipped it out and did not give me a sending test. 1954
. . something like that. 1625 PA toobs cathode keying daze.

Not too much later QST pumped out a construction article on a very
early solid state keyer which required laying out the artwork then
exposing and developing the circuit board, scounging all the parts and
stuffing it yerself. Which I did. Helluva lotta fun & education and it
worked tits coming off the bench. After I solder-coated every trace on
the board of course. The iambic Mode A paddles was a pair of
back-to-back J-38s mounted vertically on a mongo brass base.

I don't think that in a half century in this game I've managed to pull
off a total of five q's with a straight key. I won't bore you about
what I think should be done with the few remaining bugs which are not
in collector's museums.

There is a large percentage of really mature hams using digital modes.
I've typed to several in their 80's who are technically savvy and
computer literate. I had a great QSO with a guy in California who was
well into his 90's. He was still havin fun, still learning.

So lack of understanding is a bogus argument.

Hmmmmmm. Has Nomen looked at the side of a laptop. (Hint - most of 'em
have built in sound in and out) I love my old Thinkpad for just that
reason. Just plug the cables into the Mic and headphone jacks.

Lesse, It's a pentium 166 with 32 megs of RAM, running WIn95 and
Digipan. Cheap city.

PCMCIA sound cards? Sheesh!

3155. 5MHz, Morse Code IS legal

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-23 03:45:38 UTC
From: Dan Finn <djfinn2@bellsouth.net>
Message-ID: <myuJa.17416$bH3.11055@fe02.atl2.webusenet.com>
Source record: 69293

It is true that USB is the only mode allowed on the new 5MHz channels.

HOWEVER, that does not mean Morse Code is prohibited! Only the CW mode (with LSB, FM. AM) are prohibited.

All you need to do is go into the SSB mode and operate audio Morse Code (such as with a practice keyer) and you will be perfectly legal.

Sorry no-coders, but this is the truth.

> of that radio.

There is no FCC requirement for "Type Acceptance" of HF transceivers used in the Amateur Radio Service. We can make ANY modifications we desire to commercial equipment, or even scratch build our own equipment, so long as we operate on authorized frequencies within the power levels and spectral purity requirements of Part 97.

Al, There is nothing whatever to prevent the FCC from permitting US
amateurs additional SSB frequencies lower in the band no matter what
takes place at the conference. The Commission did so quite a number of
years ago in the case of 20 and 15m. Perhaps you've heard of it.
```

This may be true, but the US position has always been that the whole world should realign the whole band instead, which seems to be happening. Quite a few people expect the FCC to extend phone down to 7100 when the Novice subbands are abolished, but the FCC says that it won't even do that unless there is a consensus, and even if it did that would make no difference.

>> >> If you are expecting any of

The only other way that the 'DX refuge' could disappear, is if other countries, after getting more spectrum, raise the cw/phone boundary further up the band. I don't think they will, and even if they did, in most it is not compulsory.

No, that's about amplifiers in the US. And while there is an issue
of type acceptance, ironically it has nothing to do with the amateur
service. It's there to inhibit the propogation of such amplifiers
to activities where their use would be illegal, ie CB and the band
between it and 10 meters.

Note that the RSGB have said that s25.5 has been agreed in principle, i.e.
it's a question of what wording will appease the Russians and Germans, but
it will just say that *they* can keep code testing and everyone else can
ditch it!

There nothing to be sorry about, no-coders only want to
delete 47 CFR 97.503(a). They do not care how much you
operate CW.

A primary government user will not be able to tell if operating
CW or MCW. Internally, some transceivers actual generate
CW as you describe. So before you get a NAL, I suggest
you check with ARRL or Bill Cross at the FCC .
You won't hurt the no-coders, only yourself and the
Amateur Radio service.

Larry, kc8epo

Absolutely. I don't have the info on "the way it was" but I suspect
that if we compare the total number of mHz hams had available, for
instance, in 1963, 1983 and today we've continuously gotten
additional spectrum space, not less. In the case of HF I expect
we'll get even more space as the other HF users continue to move off
HF and into satellites and the Internet.

> That doesn't mean hams can or should be compalaent...as we

Agreed again. If I was a Tech I would be a lot more concerned about
the threats than I am as an HFer. They're the bunch which really needs
to get their oars in the water.

Pretty much, except for Number 21. The list has been posted here a few times over the past few years. It was developed in response to someone who claimed that hams don't need operating skills, just technical and regulatory knowledge.

You may have noticed that not one of the skills is Morse code specific.

NOW I get it. The 7800 has a flock of CPUs plus it's operable on 6M.

Zo in summary the stickers on my gear are "certificate of compliance" notices WRT to the rcvr and CPUs tossing out trash per part 15 and don't have anything to do with transmitter type acceptance. I find that a bit odd but OK.

> Or alternatively, the manufacturer could have applied for
> certification of the transmitter in services other than amateur but
> that's doubtful.

I can't imagine any other service using the 7800. The beast redefines the meaning of "complex equipment", ya need 40 hours in the manual to get it up and running right.

> ditch it!

The ITU sets the *minimum* requirements, it does not tell sovereign administrations like the FCC what additional requirements above & beyond those minimums may be imposed in their countries. In other words the Russians could set a 15 wpm code test as their entry-level code test with or without S25.5. And have been able to do that going back to the dawn of ham radio. Ditto the FCC. Therefore the Russians & their cohorts obviously don't need "appeasment", they do want to retain S25.5 in some form or another. Ya gotta be a complete stupid if ya don't think they're serious threat to the nocode dream.

As far as us PTCAs are concerned the botom line is that we have absolutely nothing to lose or gain, we already have it all and S25.5 could disappear tomorrow with no effect on us. It's not us who have the stake in abolishing S25.5, it's you codeless types who are providing the amusement.

So keep praying and posting, we're enjoying your thrash enormously.

I agree. Other than being an opportunity to show that you can afford one,
it does precious little more than what my aging FT757GX and an outboard DSP and
antenna tuner can do in terms of getting a signal out or picking one out of the
trash.

A skilled operator helps too! =)

3180. PETITION FILED TO OUTLAW HI-FI SSB ON THE HF BANDS

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-23 13:55:16 UTC
From: channel391@juno.com
Message-ID: <ae188f77.0306230555.1fb50431@posting.google.com>
Source record: 69230
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.cb

Newsline has the following report on the problems being caused by
those hi-fi SSB operators and a petition to run them off the airwaves:

RADIO LAW: HAMS PETITION TO OUTLAW HI-FI SSB

On-air experimentation with so-called High Fidelity or Enhanced Single
Sideband
transmissions could be outlawed if thr FCC adopts a proposed rules
change
requested by two radio amateurs on opposite sides of the country.
Amateur
Radio Newsline's Paul Courson, WA3VJB, reports from the nations
capital:

--

A petition for rulemaking was sent to the FCC and accepted by the
agency May
27th. It was not immediately issued a Rulemaking Number so it was hard
to find
in the public record. However, Newsline has talked with two sources
who have
seen the proposal, and it calls for what many would consider severe
bandwidth
limitations on HF phone.

The petition asks for a federally mandated bandwidth limit of 2.8
kilohertz for
SSB, well below the extended bandwidth needed for what has been called
enhanced
audio.

One of the two hams who submitted the petition told the FCC they are
motivated
by interference problems caused by two groups of single sideband
operators.
These groups are portrayed by the petitioners as, in both cases,
having cast
aside traditional voluntary limits on bandwidth of roughly three
kilohertz. The
petition therefore asks that these voluntary limits be made mandatory
to
provide a clear enforcement mechanism for regulators.

The petitioners, Michael Lonneke W0YR of Virginia, and Melvin Ladisky W6FDR of
California, said hams from one of the groups come on during radio contests, and
are found tweaking their transmitters to splatter purposely to provide elbowroom on a very crowded band. The two men characterize the other group as
those who experiment with high-fidelity audio, apparently trying to replicate
the sound of FM Broadcast stations.

Newsline has recently reported on advisory letters sent out by FCC Enforcement
Counsel Riley Hollingsworth, K4ZDH, who wrote to several members of the
enhanced SSB group telling them the agency had received interference complaints. The letters did not validate nor dispute the complaints, but warned
the stations that if such complaints continued, the unresolved friction could
trigger petitions for rulemaking. One such petition is now at hand.

A Newsline reporter spoke with Lonneke, who declined to provide a copy of his
petition for this report. He said he and Ladisky hold the same views on the
matter of excessive bandwidth causing interference, and that they teamed up on
the petition to add strength to their call for regulatory intervention. Lonneke
declined further comment, and said the petition will speak for itself if the
FCC chooses to assign it a rulemaking number and put it to public comment.

Members of the enhanced SSB group have told Newsline they believe their
experimentation with improved audio is totally in line with the spirit of ham
radio, and thet when conducted under appropriate conditions, is every bit as
justified in bandwidth consumption as any other spectrum-intensive activity,
including contesting. But the FCC's Hollingsworth, reacting to such comments,
disagreed, suggesting the mode of SSB was commissioned for the amateur service
as a spectrum conservation mode, counter to the idea of high-fidelity audio and
the bandwidth it requires.

Hollingsworth could not be reached to comment on the proposed Petition, and
another FCC official declined to comment.

The petition also mentions the legacy mode of AM, and said it, quote, does not
create the same problems that the burgeoning use of so-called 'Hi-Fi Single
Sideband' creates. Nonetheless, the petition asks the FCC to impose a 5.6
kilohertz bandwith limitation on AM, with the restrictions asked for on all HF
allocations below 28.8 megahertz.

Previous regulatory proposals based on bandwidth have failed, including Docket
20777 from the mid 1970s. The conclusion then was that having loosely-defined
technical standards allowed the greatest range of experimentation in ham radio,
as long as such signals are clean. Indeed, many present-day violations of
splatter, overdriven amplifiers, and poorly administered audio lashups can
already trigger enforcement action under existing FCC rules governing the
purity of signal.

Reporting for Newsline, Paul Courson, WA3VJB, in Washington

--

As we go to air, the ten page petition by W0YR and W6FDR has not been been
assigned a Rule Making number designation. More on this story in future
amateur Radio Newsline reports. (ARNewsline(tm), W5YI)

What, no MS-DOS??

I have a customeer who has an original IBM 8086 PC with two 360K 5.25"
floppy drives and no hard drive. The thing has been churning out
strips of adhesive wire tags in his panel shop for at least twenty
years.

Woo-woo! The Athalon box is a screamer and a half. 2Gb RAM huh?
Yoicks. There's a game machine to kill for.

You do tend to make concerted and extended efforts to avoid Microsloth
dontcha? I been watching the Sun, IBM and SCO brawls. Offhand I'd say
Bill needs to be concerned.

The old Troll-O-Meter has front-end sensitivity problems I guess.

Only those (enforcement) rights not specifically granted to the Federal Govt' (FCC) belong to the States (us). It matters not that the primary users cannot understand our communications. However, if they wish to be able to identify the callsigns of the secondary users, then they may wish to learn CW for these rare situations, since Part 97 allows, in ALL cases, a Morse call sign identification not faster than 20 wpm.

Why the guilt trip about hurting amateur radio? Why would anybody care if I used Morse (as you yourself say?). I did study psychology at the University and I am always curious as to why people attempt to use "guilt" as a hook in an attempt to control the behavior of others (wives do it all the time!). In ham radio, there is only ONE controlling factor: KD4ZDH.

Put that in the bank.

> > Nah, but we're endlessly amused that the pro-code-test contingent's
> >hopes are pinned on nations like communist Red China.
>
> Is China really "communist" any more?

You bet, but not as hard-core Communist as it was in Mao's days. It's
still a monster opressive single-party state which is creaking and
leaking as it plods toward democracy. Incredible volumes of
corruption. Chinese hams came back on the air some time ago after
being shut down for decades following the onset of WW2 but there
aren't very many of 'em so far.

They're very heavy hitters at the ITU along with the Russians and tend
to think like the rest of our former Cold War adversaries. e.g., they
still hang together and they ain't much into freebies and work
avoidance. Or "consensus building" which is the name of the game at
WRC03 according to Phil. They're all much more comfortable with
"negotiating" via bully politics. The question as far as S25.5 is
concerned could well be whether or not the thrust for a consensus to
abolish S25.5 will collapse in the face the bully politics. The easy
way out of that quagmire for everybody of course would be to do
absolutely nothing about S25.5 and take a hike on it.

I suspect that this is what was meant when the VK1ZKM reported:

"The chairman of the WRC03 working group handling this item (S25.5) is
now
considering how best to handle the matter, and has a difficult task
ahead of
him."

> Seems like we import a lot of consumer
> goods from them. They're also the #1 source of foreign adoptions to the USA.

It's all about money. Start tossing the almighty Yankee dollar around
and all of a sudden the local ideologies move to a back seat.

That one has a bit of gray beard but if it works OK there ain't
nothing wrong with it. Helluva lotta radio for the buck if you buy a
used one.

> and an outboard DSP and
> antenna tuner can do in terms of getting a signal out or picking one out of the
> trash.

Umm . . the 7800 does a bunch of tricks the 757 can't do. Two complete
rcvrs is one. 200 watts out is another. Lotta IF DSP. Check the specs.
The high-end contesters & dxers will go for it. In truth most of 'em
are not into impressing anybody with what they spend. They have the
dinero and use it to buy the best technology out there simply to boost
their competitive positions on the air. I was in one of these types
shacks about a month ago. I noticed a stack of big black boxes in a
corner and took a closer look. A whole frigging pile of Acom 2000A
solid state amps. The damned things cost $6,000 apiece. The guy just
shrugged, "yeah, they're pretty handy". No shit . . !

>
> A skilled operator helps too! =)

Put a lid in front of a 7800 and giggle.

Sorry, Dan. The 'controlling' factor includes the FCC, but is considerably bigger than the FCC. There are international agreements. As was pointed out, some rigs generate CW by using SSB and feeding an audio sine wave into the audio system. With high carrier suppression and high unwanted sideband rejection, it is virtually indistinguishable from 'normal' CW (on off keying of a carrier). Dan tried to point this out. I would suggest you check with the FCC on this one. It might (just might) be possible to send an id within the legal bandwidth in Morse, but in all likelihood it would irritate the current users of that band. The last thing anyone should want to do is cause problems with the current users or we could loose the 5 MHz allocation. That would have nothing to do with 'legal' or 'illegal', it is simple reality. Flaming the newsgroups (which I don't consider your post to be) is one thing; causing problems on the air (especially in the new 5 MHz allocation) is quite another.

Dave, I've cut my reply to the policy group only. My ISP takes a dim view of too much cross posting (although we are allowed a limited amount of it). Too many folks try this 'legal'/'illegal' stuff and try and push the envelope. Had the folks who wanted to try this ensured their rigs were clean and weren't splattering *and* had they kept the transmissions to fairly quiet bands (say 10 meters which is very wide or 80 meters during the daytime), there likely wouldn't be a problem. Unfortunately, some of the mentality which permeates some other radio users also seems to affect some of the amateur radio folks. The result is that if we can't share resources responsibly, someone else will start passing laws (or taking resources away). Not a pretty picture :(

Do all the available searching you need, Kellie, but there was NEVER any "number of mHz hams available" anywhere.

Ain't NO US ham allocations for operation below MF, Kellie.

ITU-R stops low-end spectrum allocations at 9 KHz. :-)

>valid e-mail and their real name.)

That's a typical MO of the flamer-fighter. They get all excited and angry about "anonymity" when no Official Federal Merit Badge callsign is signed in a posting. It's a DIVERSION to get away from the thread subject and they hope that others will think they are "better" with all the trappings of Official Callsigns, etc., etc.

>
>Sorry no-coders, but this is the truth.

Nooooo. Technically, a beeping audio modulation is going to appear
as on-off keyed CW in the channel spectrum if the carrier and un-
wanted sideband suppression is good. Think about basics of
SSB modulation.

The best you could do to be on the pro-code side of that technical
gray area is to use a trashy audio tone so that it creates sideband
products on either side of the beeping audio tone. That will appear
as multiple RF signals within the allocated bandwidth, looking less
like a single RF signal.

>defilade?

He's a bitter ex-USMC medical drop-out who is desperately
looking for a substitute in rank, status, and uniforms with
preety medals on it. Thinks he's a Dill Instructor (at Camp
Clausen).

This ex-USMC never worked any military comm in his 18 years,
doesn't know about the AN/PRC-119 and family that has been
operational for the last 13 years (quarter million total built as of
2002) and didn't know squat about the earlier AN/PRC-25 or the
PRC-77 that date back to the Vietnam war. Basic small-unit
radios in the US military for the last 30 years.

Ol' Steamy's "experience" in electronics engineering was a less-
than-a-year stint as Purchasing Agent in a medium-sized TN
set-top box maker...and then claims to know everything that
goes on in electronics engineering. :-)

>> >I've done things and been places that would leave you confused

Not only is he an ex-gyrene but he's hypocritcal in the extreme.

All is EMOTION with Steamy and he tosses all social civility out the window if anyone disagrees with him. He will cuss at you, call you names, etc., then turn right around and whine and complain about "couth" if gets return fire. :-)

Problem in here is that ol' Steamy now has you targeted and you have been added to his HATE LIST where he tosses all "couth" aside and is obsessed with heckling. He needs some mental help desperately but doesn't understand his problem.

My wife has a MASTERS DEGREE in BOTH Education and Social
Work, granted by the UNIVERSITY OF ILLINOIS. If you still think
that is a "correspondence school" then you are just a dime-a-
dozen military medical drop-out witless jerk who thinks his
beloved amateur radio license is some kind of "doctorate" in
physics.

The best degree you can claim is a "98" on a warm day.

Go back to shouting from under the bridge, Troll.

Required for a manufacturer to sell the radio. But where do the regs
prohibit a ham from modifying his rig (as long as it is used within the
amateur bands)?

I had the misfortune of running into him in three different venues.
First was the old ham mags where he spewed his vitriol all over those
pages. Then I subscribed to Byte and dammit there he was again with
the same BS. When I got my first issue of "CD Review" magazine I
almost came apart, there he was once more with his crap, could not
believe it. In every case the mags he founded were bought out for tidy
sums of money and immediately cleaned up by the new owners. That's
what he's actually all about and he's good at it. As much as that
galls me.

Right Jim, the government gave the amateur radio service the allocation,
miss use it and they will take it back. And, if they take it, what will
happen the next time ARRL applies for another secondary allocation?
Geeeees Dan, ink is not even dry in the rule book and you want
challenge it. Gives a break.

"We", Lennie?

There's no "we" here for you. Not until you are licensed in the Amateur Radio service and participating in some meaningful way.

Until then, there is "us" and there is "you".

I don't think so. The rules didn't say "USB" itself, but a designator
that specifies "voice encoded
onto an upper sideband signal". Audio beeps are not voice....

As we are secondary users in 5MHz, it would be best if we observe the
primary conventions and
rules of this band. We need to prove ourselves as good neighbors and an
asset to the primary
users, not a liability.

I used to eat Cap'n Crunch back in those days (mid sixties) and got a
few of those
infamous whistles. The ones that produced a tone at 2600 Hz IIRC.
Heard the
phone company made the company who made Cap'n Crunch recall all the cereal
boxes that had the whistles.... I actually tried one of those
whistles on the phone,
the phone call ended when I did it.

>Sorry no-coders, but this is the truth.

This is absoluteley wrong.

The actual Report and Order in ET Docket 02-98 adopted on April 29,
2003 (it's on the FCC web site - FCC-03-105 - look it up in EDOCS)
specifies emission type J3E, upper sideband.

According to Sect. 2.201 of the FCC Rules, J3E is SSB supressed-carrier
single-channel analog telephony, i.e. "phone" as specified in Sect.
97.3(c)(5). It cannot be stretched to cover communications by Morse
Code, although incidental use of MCW Morse for station ID is allowed
as part of "phone" communications.

Good try - you lose. Or were you trying to be funny?

That's because "mainland" Chinese families are forbidden to have more than one child, and those who produce more face prison camps if they do not place the "extra" child for out-of-country adoption. We have several friends who have adopted such children, because healthy Caucasian newborns are virtually unavailable for adoption in the US any more.

The "chicken" way is to take what is known as a footnote exception,
which would read something like "Countries A, B, and C reserve
the option to not require blah-de-blah". Had Japan done that at
the last W(A)RC, there would be no question that their no-code
license is in full conformance with the IRR.

No BillyBloatware programs for me except for the "OS" if you want to
call it that on my NT machine and my wife's NT machine (she needs it
to run MSWord, Excel and AutoCad so she can work at home if need
be).

I posolutely do not run Internet Exploder or any of the other
virus-magnets even on the NT boxes.

If Linux had ports of the mailer, newsreader, and text editor with
which I do about 90% of my computer work, I'd be running that as my
primary system. Actually I have Red Hat 7 on an alternate-boot
drive on the NT box but I wasn't impressed with it. I do understand
that Linux 8 is better.

Oh, hi there. I'm using a new mic setup here in my quest for Outstanding Transmit Audio(TM). It's a modified free-range Heil binaural pair combined with a custom-made Neumann capsule inside a hollowed-out candy apple red RCA DX-77 Big Pill on a weightless Magnausium(TM) mic stand. Some call it a mic arm, I call it a mic stand. UMM-huh. I'm using a Ward-Beck console and high-temperature superconductor cables with gold-plated connectors to mix it all down to my ... uh ... well, it's an Alinco DX-70TH but you can't have EVERYTHING, can you?

How do I sound? Sibilance, silbilance, silibance. Outstanding Transmit Audioland(TM) here I come!

Did I mention that the DX-70 is hardened with depleted uranium plating? Makes a big difference.

Homebrew.

If I design and make a rtnasmitter and reciever at home, I do not have
to submit it for type acceptance.

To me it is one of the biggest priveleges we have.

I'm saying that in many countries the regulatory agencies (the government)
will not rigorously enforce the rules against the SW BC stations (also the
government). Consider that an example of 'Realpolitik'.

That would be a first - a majority of member states listed in a footnote

It's more likely that those keeping it would be the footnote.

As most hams know, FCC recently asked Official Observers as well as other hams to monitor
for individuals, truckers, or other entities using our 10 Meter bands. How many of you hams
ARE participating in this? Have any been "caught" and turned over to Riley Hollingsworth?

I encourage all hams to monitor 10-12 Meters (particularly 28.085 AM) and make enough of
a dent in this illegal use of our bands for those guilty will sit up and take notice, and decide that
it is not worth it. Let's not wait for someone else to do it, let's all of us, for the sake of ALL or
Amateur spectrum, become pro-active to stop this.

Consider another example of 'Realpolitik' -- the regulatory bureau
chief will say to the broadcast/propaganda bureau chief: "If we
don't stick to the deal that we made (i.e. QSY), the guys that we
made the deals with this time will crap all over us next time".

That's one of the first things that I learned when I started in the
regulatory business.

Jerry,

I found 10 meters wide open earlier today. Big signals from the south, but I didn't hear the signals you suggest. I'm not suggesting they don't exist (I'm sure they do), but I only heard a couple of loud signals - both from licensed amateurs.

The thing I *do* like about Wayne is that he gets people thinking..... I kinda compare him as the "Rush Limbaugh" of ham radio. Whether or not you agree with him or not, he gets you thinking. As lethargic as ham radio has gotten, we need more people like him, just to wake some of the old farts up. (speaking in generalities here, not specifics.)

My comments regarding the "retardation" of the digital capabilities in ham radio were based upon a recent meeting we had with the local emergency services director and "served agencies." What they need is not at the level it could and/or should be of what we can offer as hams..... Its gone beyond simple message-grams.

3258. FLASH: Number of "Extra-Lights" tops 20WPM Extras

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-24 05:15:49 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0306232115.795a3940@posting.google.com>
Source record: 69406

Given that in the year 2000, just before the last restructuring, there were probably only about 55,000 "real" 20WPM Extras (based on the assumption that there were at least 20K medical waivers and "cheats" who were simply handed their Extra papers), and figuring about a 3K loss in numbers due to attrition... and given that we now have about 104K Extras today - that means we now have more "Extra Lights" than "20WPM Extras"!

So - CONGRATULATIONS to the ham community in general, we've just passed another big milestone on the way to erasing the perception among the general community, that ham radio is obsolete.

... and in that light... With the increasing amount of sophisticated and low-cost HF rigs becoming available, many more of us "Extra and General Lights" have been getting the chance to play around with the PSK-31 lately - which EVERYONE knows is more efficient than Morse Code.

So, as PSK-31 begins to "MUSCLE OUT" Morse Code, the popularity of HF will resurge, HF rig capabilities will continue to expand, and prices and sizes of these radios will continue to drop... it is hard to understand why the sourpuss 13WPM/20WPM diehards fought so hard, for so long - when it is SO CLEAR that we are all now benefitting from the changes.

- Stewart (N0MHS)

I think it said J3E. In that case, CW/morse would be excluded....

Not a "give" at all.

>(based on the
>assumption that there were at least 20K medical waivers and "cheats"
>who were simply handed their Extra papers),

On what do you base that assumption? Do you have ANY objective information on
the percentage of hams with medical waivers?

>and figuring about a 3K
>loss in numbers due to attrition...

That's about the only reasonable number you've given, so far, and it's on the
high end.

>and given that we now have about
>104K Extras today - that means we now have more "Extra Lights" than
>"20WPM Extras"!

Wishful thinking on your part, Stew.

Besides, I haven't seen any licenses that say "20 wpm Extra" or "Extra Light"
or Extra Lite". Just "Amateur Extra".
>
>So - CONGRATULATIONS to the ham community in general, we've just
>passed another big milestone on the way to erasing the perception
>among the general community, that ham radio is obsolete.

What ARE you talking about, Stew?

It's been more than three years since the restructuring, and total growth is
10-11 kilohams. Amateur Extras make up only about 15% of the total, even though
the code test is the same as for all other code-tested licenses and the written
test requirements dropped from 5 tests to 3.

That depends on how you define "efficient".

Ah - just another troll. Ho hum.

The other night I had a very nice 40 meter CW QSO with a relatively new 1x2 Extra. He was going about 6 wpm, which was a comfortable speed for him and a no-brainer for me. Lots of fun.

Let's see how the digital modes do on Field Day

Those are three of my biggies. When I'm working - which I'm not at the
moment.

> I posolutely do not run Internet Exploder or any of the other
> virus-magnets even on the NT boxes.

I run Exploder but haven't had any noteworthy problems with it. But I
absolutely refuse to go anywhere near any flavor of Outlook which is
the absolute worst of the bug magnets.

One of my brothers is a far-end Linux wonk, a journalism grad who is a
statistician, robotics guru, webmeister and Perl code warrior for GM.
Pony tail. Iconoclast. Family odd duck. He has a row of Linux boxes at
home. I dunno what he does with 'em but he does it all night and keeps
mumbling "Kill Bill!"

He keeps lashing me to get a life and get Linux running here. I keep
telling him I'll do that as soon as he ports Acad, Inventor and all
the other engineery stuff I run over to Linux.

Maybe some day . . .

Amateur Radio is no closer to nor farther away from being
obsolete based on this premise than it was 50 years ago or will be 50
years hence.

> ... and in that light... With the increasing amount of sophisticated
> and low-cost HF rigs becoming available, many more of us "Extra and
> General Lights" have been getting the chance to play around with the

No, it's not more efficient than Morse Code. It requires far
more ahrdware to support it and cannot be run without that additional
hardware.

> So, as PSK-31 begins to "MUSCLE OUT" Morse Code...(SNIP)

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH

Amateur Radio has already been "benefiting" from PSK-31 and other
digital modes from a long time before "Restructuring" and will
continue to do so.

The only thing "clear", Stew, is what ever you've been sipping on
before launching into yet another troll.

That's what made it so amusing. I also took note that the subject's USENET
etiquette was a tad more abrasive than the moe recently displayed polish.
IOW, a budding pseudo-politician.

But we experimented too much. We created the ham equivilant of the
'Frankenstein monster'. Now we have to live with it.

There was one in QST back in the early 60s on two meters with a KW.

Now its done with single yagis and 180watts. Big changes.

Which is what most of the test is, nowadays.

Which brings us back to the question of why must ALL hams be tested on
things some may never use? Band edges are just one example.

> > There's a bunch of historical reasons, too. Reading the old License
> > Manual study guides from decades ago, it's interesting to note how

> > other areas like receivers. The obvious reason is that FCC focused the
> > exams on the areas where hams had problems.
>
> How did enforcement and self-policing evolve during the same period?

Several ways:

- Equipment got better and less expensive.
- The general level of knowledge among hams rose.
- It became clear to amateurs that if they dodn't police themselves,
there would be no more amateur radio.

> I can understand gearing testing towards problem areas - I'm wondering how
> the problem(s) start and if testing or enforcement/peer pressure solve them.
> Any ideas?

The problems start in two general areas: ignorance and apathy (don't
know and don't care). Ignorance is solved by education, but apathy is
tougher.

In the bad old days most violations in the ARS were technical in
nature and often the result of technical ignorance on the part of the

ham. For example, the ham who unknowingly strayed out of band because
he/she didn't know how to adjust a transmitter to keep it in the band.

Today most violations are for operational things like intentional
interference, obscenity/profanity, uncoordinated repeaters, etc.

> > Also, once upon a time, FCC issued licenses in another service with no

>
> Ahem. ;)

Exactly!

> But, was it a lack of testing (not that I'm advocating
> doing away with testing in the least) or lack of enforcement that caused CB
> to spiral out of control?
>
I think it was due to several things:

1) Lack of testing meant that someone could just sign the form without
actually reading the rules, let alone remembering or understanding
them.

2) Lack of enforcement meant that people soon learned they could break
the rules without much chance of a penalty.

3) Lack of testing (and inexpensive equipment) also meant that the
licensee had very little investment of money, time or effort in that
radio service.

4) The sudden creation of the service meant there was no built-up
tradition of rules or practices.

5) Rapid growth meant that the enforcement capacity was soon
overwhelmed by sheer numbers.

Put them all together and you have a recipe for trouble.

> > > > OK, fine - then it makes sense for there to ba a test of basic

> > level.
>
> I'm not buying the argument that Morse is a "basic" skill, sorry.

I apologize if the above wasn't clear, because the word "basic" is
used in two different contexts. Here's another go:

In HF/MF amateur radio, Morse/CW is so widely used that to be without
any skill in the mode is to be cut off from a very big part of what
goes on there.

The Morse/CW TEST used here in the USA is a very low-level "basic"
test. IOW it does not require a high degree of skill to pass that
test.

Try this: Listen to the CW/data parts of the HF ham bands this coming
weekend. See how much CW activity there is by hams on, say, 40 meters
on Saturday evening.

The only reasonable use of phonetics is to clarify the spoken word
under less-than-perfect conditions. That means voice modes only.

> > > > Perhaps - but there are plenty of folks who would say Morse/CW skill

Morse/CW is used for many reasons beyond just keeping a tradition
alive.

> > they just look it up, same as the band edges?
>
> Because it's one of those core, basic skills - radio theory.

I'd define it as knowledge, not skill. But in any case, that doesn't
mean we MUST test for it! What harm results from a ham who doesn't
know much about propagation?

> Any specific band edge/plan what-have-you is specific enough that _I_ don't
> see a need to test for it.

Sure - but we don;t get to pick and choose what is tested for and what
isn't. One person's "core basic skill/knowledge" is another's "hazing
ritual" or "something I'm never going to use" or "I'll learn that when
I need it".
>
> > Go down that road a ways and there's not much left of the writtens.
>
> Your arguments are unconvincing for me - you haven't demonstrated
> that knowledge of Morse contributes _anything_ to producing good operators

I have found that USE of Morse/CW contributes greatly to producing
good amateur radio operators. That doesn't mean that all good ops MUST
know and use Morse, however.

> and your argument(s) regarding the written test are bordering on reductio
> absurdum.

Reductio ad absurdum is a valid way of proving or disproving an
assertion. In this case, I have shown that if the assertion "Don't
require anyone to learn something they may never use" is applied to
the written test in a fashion similar to the way it is applied to the
code test, we wind up with an absurdly-brief written test. Hence the
assertion is faulty.

> Frankly, there's no rebuttal to the idea that propagation theory
> isn't a fundamental concept,

Of course it's a fundamental concept, but why MUST it be tested? Why
MUST hams know about propagation on bands they may never use?

>so I'm not buying.

Which are? Besides Ohm's Law and propagation?

> > > > How much theory is needed to operate an HT?
> > >
> > > None, but that's true of any radio.
> >
> > Not true of some that I use!
>
> Indeed - OK, spill.

Most of my equipment is homebrew and has to be tuned up in order to
operate. It takes some understanding of what makes my rigs tick in
order to get them to work. This was once generally true of almost all
radio gear, but over time the adjustments have been reduced and
automated to the point that no real radio knowledge is needed anymore.

> > > The argument here is, really, do

All of which can be learned on-the-job, so to speak.

> Hell, just see the thread on 5 Mhz
> going on right now - unless you can argue that knowing what's going on
> inside the radio and out at the antenna is of no help in understanding that.

Merely a matter of definitions. Not theory in the sense of real
understanding of how the rigs or antennas actually work.

> > > while CW/Morse simply does not, if it did, it'd

> aware of these little things are what go into making a good operator.

Only if you include a lot of technical stuff in the definition of
"operator".

But our licenses are for operating, not doing technical stuff. No
license is needed to build a station - the license is only needed to
use it on the air.

What it really comes down to is that you define "hams" as "radio
operator/technicians" who should be skilled in operating and
knowledgeable in technical stuff.

Which is a pretty good definition, I'd say.

> > > That it's being phased out across the board is sufficient proof that

> > meets all the requirements.

Some of us actually design and build our own rigs. But with
manufactured equipment getting more inexpensive-for-what-you-get every
year, homebrewing
has become a niche activity.

In fact there are very probably far more hams operating Morse/CW than
homebrewing nowadays.

> *shrug* FCC will do what FCC does.

A lot of that can be influenced by hams.

> > Not at all. I'm simply applying the same argument to other parts of

Sure - but does everyone who uses a radio have to know Ohm's Law?

I don't think that's true anymore, Phil. There was an excellent
article in the Philly Inquirer about it this past Sunday. IIRC, the
"one-child" rule was mostly for urban folks. I think the rule has been
changed to "one son or two children".

The result has been a large number of abortions, and a large number of
baby girls in orphanages. Usually the babies were abandoned in places
where there was a high probability that they would be found quickly.

Same here. Were any of the adopted Chinese babies boys?

OTOH, the emergency management folks as well as the "served agencies" here are delighted at the services that we provide, which go beyond the message-grams to include packet tranmission of anything that can be digitized into 256-bit characters and SSTV of sheets of things like road closure maps, etc. Voice circuits are used primarily for tactical status reporting and dispatch to back up the agencies' "FailSoft" simplex systems (the base stations are in the buildings of the agency, not on some mountaintop or remote tower) which themselves are backup of the County-wide trunked system. Folks assigned to specific agencies get training in the dispatch systems and needs of that agency and many can run the FailSoft dispatch points if need be. We're not limited only to operating our ham radios in push-to-talk mode.

We're even looking into phone-patching into the internal telephone systems of the EOC and the hospital's command center to enable real user-to-user comms through ham radio (it's certainly not new technology - we had that in Los Angeles in 1958) but that may be a ways down the road.

It pays to note that all of the served facilities are connected by a dedicated 100 MB buried fiber system separate from the "consumer" cable TV system, with microwave backup. They fully understand that during a disaster this may not be available.

I have no problem with experimenting, even experimenting with wide SSB.

The problem is doing it on 75 or 20 meters where it causes un-necessary interference. The un-necessary interference is the problem.

Experiment on a band with plenty of 'space'.

He'd just sue you for the rights, make a mess of it, sell it to
get out of bankruptcy, then tell everyone how he was just doing it to
jack up the price.

I've met this guy in person too. He was at a club meeting in
Fountain Valley, CA in 1980 or 81. He started out with a pretty good
room full of folks, and by the time I'd had enough to leave, there
wasn't enough people left in the room to play a game of volley ball.

I'll tell ya one thing, though...this guy is the Energizer Bunny
of pessimists.

It was a number of years before but the same sort of setting that I ran into him as well. Sitting on the table, legs crossed and hanging down just like a sit-down night club entertainer, and moaning and griping about the League all the way.

> I'll tell ya one thing, though...this guy is the Energizer Bunny
>of pessimists.

And he has always been a fully-paid-up member of the ARRL so he has every right to moan and groan about the League, whether it's grounded in reality or not.

Not to be confused with others here.

As far as I know, Rush has never been into UFO nets, Bluegrass CDs,
decades of anti-ARRL rants or cold fusion.

> Whether or not you
> agree with him or not, he gets you thinking.

He certainly does. I subscribed to "73" back in 1975. In just a few
months I began thinking that I'd wasted my money. At renewal time, I
thought that I'd save my money and skip "73".

I seem to remember a series of articles on one of the Ham mags using
BC-348 surplus HF receivers with simple converters for moonbounce, not
easy but doable with a little ingenuity and persistence.

Mind you that was when I was home brewing 14 tube HF SSB rigs - now I
can afford and use commerical rigs which are somewhat more versatile and
smaller.
Still have a pile of parts including mechanical and crystal SSB filters
for 'the next one', but I doubt I'll live long enough - got lazy like so
many of us. But, it most definitely ain't anywhere near as much fun or
nearly as satisfying

Probably around the same number of 20 wpm extras can do that task.....
Sure.
They didn't change significantly the material one needs to know to pass
the writtens.
Oh sure, fewer questions, but the amount of material is the same. Which
test is
easier, ten really hard questions, or 100 very easy questions (assume
you have all the
time you want to finish)?

I see no reason why a 348 couldn't be used as a IF. If the noise figure was decent enough on the converter.

I don't remember that article, but Id say they were using a 417a, or a 416B triode tube for the RF side of things and possibly a 6J6 for the osc/mult chain. eh?

I don't see a need to ban wide SSB entirely. Just assert a rule saying
that it is a secondary
type of transmission, afforded no protection from QRM, and that it not
QRM other users.
A way of saying "If the band is empty, go ahead and play with it, but if
things are crowded,
forget it". This could also open up other wide band modes like spread
spectrum on HF,
"okay to experiment if the band is empty". IF these modes can be shown
to not trash more
traditional modes, then they could be permitted in more crowded times.

The thing about learning CW up to around 20WPM is that even IF you don't use it....you keep it. Sure you may slow down, but you keep it.

I was up to around 35 a few years back. Then spent several years OFF CW completely. But with just a small amount of practice I was right back up to it.

In otherwords...once you really LEARN it...it stays with you. One cant say that is true of the 5 wpm 'pre-learned' catagory.

No, I think the article being referred to came later. It was in the November
1972 issue of 73 (it was the thickest issue to that point, and had an article
about "building" a computer). The article, by someone named Brown, was
more an idea article about low cost moonbounce. So by that point it
was transistorized converters. There was an article or two that followed
about some conversions he did to the 348, and he wrote a slew of articles
that in some way referenced the main project. But, the moonbounce seemed
to be a pipe dream, while he persued all kinds of other things.

I doubt it. Just dial into the morse sections and there will be plenty of it. Lately I've found more going on in the morse sections than voice due to the absolutely dreadful propagation conditions. And 3 years from now, we will be at the nadir of the sunspot cycle. So I expect to see increased activity.

>

I've been reading "The Art and Skill of Radiotelegraphy" recently and the author, who appears to have done considerable research in the area, considers the 13wpm to be the break point between remembering it (even if one gets rusty) and losing it.

As with you, I was off the air for several years, but found my code was there even though it was slow.

Dee D. Flint, N8UZE

Excellent point, Dan. I had 'learned' American land line Morse years ago (1968) and actually used it once. I had to have the other op slow down to about 16 words per minute as I was using a mental look-up table for the other characters (such as 'c') whilst I understood the 'normal' characters (same as international Morse). After going QRT in 1970 and deciding to retest and get my license back in 1993, I found the 20 WPM test easy, but I do *not* recall the land line Morse - except for 'c' and 'q' LOL. BTW, the Morse was well sent in the movie 'Fantastic Voyage' which I copied just fine in the 70s. It does slow a bit, but if you really had CW ability, it doesn't evaporate overnight (nor, as I found out, over a couple of decades). I simply walked in and passed all of the tests (except for the 5 and 13 word per minute code tests - I only took element 1C .... 20 per).

73 from Rochester, NY

Good observations Dee D....when the going gets tough...then CW prevails. Of course it takes two things to communicate. A operator at both ends.

Yep....the international standard was 10 to 12. And the FCC put it at 13.
Thanks when the FCC wanted hams to actually know CW.

Excellent Jim....I wished I had learned landline Morse. Years ago...think early 60s, there was a group of ll morse types on 40cw. Used to listen in.

But military got in the way and by the time I got back stateside and on CW again they had all gone SK or something.

Yup - using relatively small dishes, too (I think the big one was a 12 footer).

Both were 7 land hams. Both were long-time-licensed codetested hams, too. ;-)

Yeah right.... I doubt it at least with the figure of 3 years. Maybe in 50 years but morse code will have use for at least 20 to 30 more years as long as there are hams that do enjoy it, regardless of if it is being used as a testing method or not.

I am sure he is a thorn in the CQ magazines' side as well too eh? I have read most of the 73 magazines from the 70's through the 90's and the magazine itself is still pretty good, regardless of the editorial. Wayne has had *some* good ideas, but in the real world the "stick in the mud" types would never allow any of that stuff to happen.

As far as a "bitching old fart" he doesn't stand alone.... there are plenty more in ham radio with him.

True.... but as I predicted to myself, you have proven a point about someone not fully reading the text.... see where it said about speaking in generalities, not specifics. They are both agitators.

>
>
> > Whether or not you
> > agree with him or not, he gets you thinking.

Well.... I don't agree with his editorials, but from the issues I have read from somewhere in the 70's till the late 90's there were alot of articles, project and construction plans etc. that was not written by him, that were actually good. To discount a whole mag due to who writes the editorial is kinda foolish, but is a persons option. I hate the editor of a local newspaper, and cannot stand their editorials, but I still read the paper.

Here are a few of the things that would be of interest:

*Full motion video (i.e. ATV) that could be remote-control deployed in the field by some form of a device that can also be remote controlled to the scene. This would help keep people safer if it is a haz-mat related situation.

*File sharing capabilities-not just talking about little files here. Possibly sending scans of important documentation or digital camera pictures or a couple of other things as well.

*Protection of communications from the general public (and media) until it is determined that information is okay to release. Also, thanks to HIPAA regulations now, patient information is a concern.

*Speed of getting message information from point A to point B etc., in a faster, timely means, as well as tracking of that information as to who and where that information went and also, the follow up on that information as to "did that really get done?"

These were some of the points referred to as being important.

Fuzzy at this point . . now that I think about it there were two of
'em. The first one was via discrete devices on a Vectorboard, worked
but not anywhere near as well as the one I described which used 7400
series chips, I think the timer was a 555 and came several years
after the first one. The second one was every bit as good as my
current MFJ keyer and wasn't much bigger plus it had a 110vac P/S
built in.

I forget how PHL connected to "customer keys". One thing I do
remember though was that Joe was definitely not up for my crap that
morning.

I couldn't hit mine that hard. I trash-picked a TV rcvr on my way home
from school one afternoon for use as the P/S, yanked all the tubes
except the 5U4, powered it up and went poking for volts. Best I could
do was 450 vdc and 12 vac.

> Didn't EVERYONE start with one in thise days?

If they didn't they should have. Those who came after ARC-5 days are
sorta . . well, you know . . junior ops, newbies, etc.

The things are radio engineering masterpieces, the epitome
demonstration of the power of the KISS theory.

> I just ran a quick
> search on eBay for "ARC 5" and there were a couple posted.

They were designed to never quit. And they haven't.

According to am IARU report, Working Group 4C has until the June 27 to
finish
their work. The Sub-working Group 4C3 had until June 23 to finish.

> It says, "Administrations
> shall determine whether or not a person seeking a license to operate an
> amateur station shall prove the ability to send and receive texts in Morse
> code signals."

It is a meaningless regulation. The adminstration would have that authority
if
S25.5 was simple deleted. As soon as WRC 2003 is finished, most
administration
will make the determination. A few like Belgian and the Netherlands have
already made the determination.

I would personally prefer the rule "Administrations shall determine
whether or not a person seeking a license to operate an amateur station

shall prove the ability solder and test fire-bottles." :-)

Three years, huh? Are you willing to make a promise on that?

I recall someone who posted here back on April 2, 1998, and promised to do something very special if the number of hams five years later was greater than the number on that date. We're still waiting for him to make good on his promise.....

The test may disappear, but CW/Morse USE will continue. Use may even increase.

Like many Alpha Tango members I have DXed over 100 confirmed countries on 12 whiskey SSB, worldwide without the need for license or expense of ham radio.

I have everything a man could ask for without the additional volunteer headache Uncle Charlie could induce by means of harassment. Besides,,I like the freeband way better than the HF hammie bands and repeaters.

And I do it barefoot 99% of the time..only time I use power, is when it's something really rare and I have exhausted myself with my 3 watts..then, and only then, I may elect to toss out a hundred watts,,,maximum. That "crime" is less than the fine and imprisonment that you can get for taping a movie from HBO.

No cber has been prosecuted (during this or the last administration) for merely operating an amp or talking DX or freebanding without receiveing a warning. So, to set the record straight, a warning letter outlining the infractions is to be issued to the offending station as a warning. Fail to heed the warning and you may find yourself facing a fine. Underline the word "may". This reduces the relative risk and associated penalty to a petty infraction comparable to jaywalking.

I have spoken to Mr. Hollingsworth personally, and I can assure you, even if he thinks that slightly exceeding power limits is ok, he can't verbalize it due his present position.

There are many hammies on the freeband...and guess what? They are cool as all get out!!! Us cbersare a friendlier lot. We really don'tgive a rat's azz if a hammie talks on cb,,,we'lll talk to him anyways...probably why they come on down in the first place,,,so they can escape the frequency fuzz and just......enjoy radio.

You do realize, don't you, Ryan, that Wayne was editor of CQ for a time?
He was fired and that set off his anti-CQ vendetta.

Actually, 73's construction articles were better in the early 1960's.
Much of the later stuff is quite basic. There was also a tendency to
swerve toward computers rather than amateur radio in the mid-1970's and
beyond. I recall telling Wayne at Dayton that I would have subscribed
to a computer magazine if I'd wanted a computer magazine.

> > > As lethargic as ham radio has

First we'd have to establish that there is lethargy. To quote you, "but
as I predicted to myself, you have proven a point about someone
not fully reading the text....". I wrote that Wayne is one of the
oldest farts around.

ATV is available now. I prefer to leave hazardous material situations
to trained professionals.

> *File sharing capabilities-not just talking about little files here.

Such things are available now, though they use COTS units over pretty
short distances.

What you're proposing is illegal in amateur radio.

3343. License for 2-way radio supporting both GMRS/FRS???

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-25 15:27:51 UTC
From: thomas <word_pass@hotmail.com>

I just bought a 2-way radio that supports both GMRS and FRS:

http://www.amazon.com/exec/obidos/ASIN/B000093IK8

I actually have no plan to use the GMRS channels at all. My question is: If I only use FRS, do I still need to apply for a license?

When I placed the order, I was told: "GMRS channels require FCC license. ". I assume this means FRS channels do not require FCC license, unless the Amazon.com description is misleading.

Please help me with this issue so that I can start to use my radio!

Thanks!
Thomas

The FCC page at URL:
http://wireless.fcc.gov/services/personal/family/
Will answer your questions
Better to get it from the Horse's mouth rather than any guesses you may
receive.

Although you "actually have no plan to use the GMRS channels at all". Why
not get the license and make full use of your radio ??? Comes the day you
may want or need it.

Not according to the Inky story, though it's possible that still goes
on.

> When foreign visitors find these babies here and there
> and scoop them up the Chinese consider it a quaint reaction.

They now have an extensive system of state-run orphanages that handle
foreign adoptions. Prospective parents submit an app and wait an
average of 14 months, then spend two weeks in China to get the kid.
Newborn adoptions are rare, usually the kids are 1-1/2 to 2 years old.

Yet they are already beginning to see the repercussions of decades of
the one-kid rules and the obsession with having sons. Main one is a
shortage of potential brides.

Thank you!

I read the official FCC text carefully. But I'm now even more confused:

"If you operate a radio that has been approved exclusively under the rules
that apply to FRS, you are not required to have a license. FRS radios have a
maximum power of ? watt (500 milliwatt) effective radiated power and
integral (non-detachable) antennas. If you operate a radio under the rules
that apply to GMRS, you must have a GMRS license. GMRS radios generally
transmit at higher power levels (1 to 5 watts is typical) and may have
detachable antennas."

If my radio has been approved under both FRS and GMRS, the text above
seems to suggest that I may need a license. Can you or someone
clarifies for me?

The only reason I don't want to use GMRS is the license fee. The radio is
very cheap even with GMRS support.

hmmmmmm, now you're getting into a really gray area. The amateur bands
are by definition open to whoever has a radio. Anyone can listen.

> *Speed of getting message information from point A to point B etc., in a
> faster, timely means, as well as tracking of that information as to who and

Sounds like they need full time, professional communicators.

How much faster doya need? I'm not sure how to speed up RF! (cheap one,
I know 8^))

Tracking of messages seems like something that is their responsibility.
I mean the Hams can send what they are told to. Just set up a protocol.

Perhaps you are thinking of the "Accu-keyer"

There were all sorts of designs out there. I recall April 1968, third
QST in my subscription, cover article used RTL chips for a keyer
powered by two D cells.

For many hams, building a keyer was their intro to logic design.

I've almost got the "FD in a shopping bag" thing going. Let's
see...K2, big gell cell, 'phones, dipole w/coax & rope, homebrew

launcher (P51 slingshot w/Zebco 202 reel and 1 oz weights painted flourescent orange), ropes, tent, folding table, wad of various cables, clock, lantern, logpapers and pencils, toolkit, cooler of eatables....and oh yeah, a bug.

> in region 3 already have.

TNX for the update.

Trouble is, if we get worldwide 7000-7200 or even 7000-7300, and the
SWBCs move, the argument for US hams getting 'phone down to 7045 or
even 7075 gets weaker because there will be lots of spectrum where US
and DX hams can work each other nonsplit if they so desire.

Which leaves us with three questions:

1) How will the 40 meter situation work out?

2) How quickly will FCC dump Element 1?

3) What other changes should be made in the US license structure and
regs?

Somehow I have a problem with 'foreign' tourists wandering in and out of the
Chinese Flora and Fauna without a 'official tour guide'.

As they say What is wrong with this picture ?

The ATV is no particular problem but a reliable self-propelled
all-terrain RC robot is another whole story. They already exist (bomb
squads) and I've been involved in the mechanical design of such
widgets at the professional level for decades and I can tell you
somebody better have very deep pockets and a bunch of expertise well
beyond just the electronics a la AMSAT. The electronics would be the
easy part.

What cave are you in -- here in CA the 20M band is loaded with RTTY, PSK31, PACKET, ETC. The 10M, 12M, and 15M bands are kaput due to declining solar cycle and summer conditions. But having worked almost all 50 states and mucho DX on PSK31 on 20M -- I can tell you that there is a LOT of activity

No it's not a troll, it's a fact, and I have been saying the same thing for years. Why should I get a hammie license and let Uncle Sam gather info on me and dictate my free speech make me adhere to rules etc. when I can freeband and have the same worldwide DX as you hams do? For one tenth the cost and one zeroeth the trouble. Most hams don't care what we freebanders do as long as we stay at 29.999 and only certain failed no code types who suffer communication deficits like Nad and Frankie howl and strain at the leash I keep them on.

Amen. Still haven't found the Q5er, though. There were a couple of
FRG 7700s and the Icom equivalent (R71) at about $400+ which is $300+
more than I want to invest in that project, if that much.

Just gave my never-been-used 40-20-15-10 parallel dipole to the
AREC/RACES group to put up at the EOC (never had enough room to put
it up withourt a noticeable sag onto the rear deck superstructure).
Someone else donated the wire for an 80-m dipole.

The Sheriff just bought us two brand-new 45 foot telephone poles
which the power company 'sposed to set next week. We insisted on
two pulley and halyard sets per pole although we do have "dibs" on
the local fire department's bucket/ ladder truck (which we
affectionately call "The Intimidator") if we need it.

I may play around with converting my three-sided long wire to a
horizontal loop for NVIS. That ought to work well for state-wide
60-m RACES comms if I ever get a HF transceiver.

If you operate a radio under the rules
that apply to GMRS, you must have a GMRS license

If it walks like a duck, quacks like a duck, you better get a duck license.

Look - the GMRS feature on these radios is a USELESS GIMMICK. Forget
about using those frequencies or getting a license for them.

Public-key data encryption w/128-bit keys is freeware (PGP) - a
no-brainer. STU-III equivalent phones are available for purchase
legally if you have enough bucks (The Big Emm really gets you for
those). Not legal on ham radio, though.

If it operates exclusively on the 14 FRS channels and is type certified
as an FRS-only radio you do not need a license.

If it operates on more than the 14 FRS channels (which are shared
with the GMRS) it is not a FRS radio and you do need a GMRS license
even if you operate it only on the FRS channels.

It's that simple.

&75 for a five year license = $15 per year, $1.25 per month, less
than one large soft drink at the fast food place per month.

Small Change.

On FRS channels 8 - 14 the radio IS an FRS radio. You do not need a
license to operate it on those channels.

Mike

The spec of my radio says: 1. "Output Power 500mW Conducted" 2. Antenna is non-detachable.

These conflicts with the FCC text:

>>GMRS radios generally transmit at higher power levels
>>(1 to 5 watts is typical) and may have detachable antennas.

Also how can you interpret the verb "operate" in the FCC text? Doesn't the using of this word mean I can own but not operate?

>>If you operate a radio under the rules that apply to GMRS

You tried to divide the fee evenly. Actually I only use the radio several times a year. The per-use cost is high, as least for me.

Thomas

Since the number of hams is growing faster than the general population,
there is not a problem.

Why should we have 2 to 3 million? What purpose would it serve? To create
an artificial interest and pull in a large number of hams won't help. They
might get licensed but then would drop it in favor of something else.

Well it may be dumb ass ham humor, but I wish I could kick the ass of all the dumb asses that tune up for minutes on end on the air on or near a weak DX station. As for tuning into an imperfect antenna, you can use a dummy load to get close, then touch it up on the air QUICKLY! The ham bands would be a nicer place to listen to if everyone had a dummy load and used it. So stupid is as stupid does....

> Do you have a degree or certificate as an RD or nutritionist?

No. It is obvious that what that the food was very bad for you. Alot of fat and alot of calories.

> You seem to want to go to radio activities and do ANYTHING except operate >radios!
>

I operated radios during the day. I would not like it if I hadn't operated radios at all.

There is a time and place. Would you wear a suit at the beach or the reverse? By analogy, Hams often wear a suit at the beach. If this were different, there would be alot more Hams. And there would be more people operating radios.

Also, there are other interesting <radio> activities one can do. I can suggest them, but there never seems a proper time to make suggestions. Hams don't seem to be interested in other radio activities besides contesting.

Maybe, but it sure helps explain why NTIA was silent till long past the cutoff date for comments. One has to wonder how they finally got woke up to what was going on. Probably some Lennie type alerted them to the fact that those nasty ol' ghastly hams were about to intrude on their turf which they never use.
.But hey, why let someone else have it that actually might make come constructive use of it just because of that?

Check Japan's stats for the proof of that.The "easy" HF license drew 'em in droves, and they soon abandoned ship the same way.

Agreed. I think some may push for phone down to 7100, in place of the
Novices.

> Which leaves us with three questions:
>
> 1) How will the 40 meter situation work out?

Three proposals are being sent on by the sub-comittee to the main
comittee. Two give 100 kHz now and the other 100 later, but the earliest
either of them starts is 2007. The third gives 50 in 2018 and another 50
in 2033. Obviously that one is lousy as it makes us wait 30 years for a DX
window! Lets hope at the next stage that one is rejected. I think it may
be, because it is so inadequate that it encourages attempts to put 40 back
on the agenda before then. Knowing bureaucrats, they won't want to see
this come back a second time.

>
> 2) How quickly will FCC dump Element 1?
>

I think it could take about a year, but some people think it may happen quicker.

There will be a bunch of petitions filed on July 5th. Some of them are bound to be over-complicated reforms filed by total crackpots, but the FCC will (theoretically) have to consider all of them.

Quite a few other countries already have provisional dates next month or the month after for abolishing code testing.

> 3) What other changes should be made in the US license structure and
> regs?
>
> 73 de Jim, N2EY
>
If I were writing a petition, I would put in automatic upgrades for Novice and Advanced, and reallocate some of the novice subbands. There is also the question of what to do with Techs and Tech plusses. Getting rid of the Novice subbands would be a loss of privileges for the latter, and keeping track of their code credit indefinitely after getting rid of element 1 seems illogical. One way out may be to make the Tech licence simply 28 MHz and above. Any thoughts on that?

I read about it within the last couple years and the article was
written in the present tense. There are a lot of variations in the
local cultures & customs within China, they are not nearly as
"homogenized" as we are. It's probably a case of what is done out in
the boonies - and there are some very remote boonies in Red China - is
not acceptable in Peking or Shanghai.

>
> As they say What is wrong with this picture ?

'Snot the way it is today Dan. One if my brothers has been to China
several times mostly on biz and was able to move around quite freely
without escorts, etc. The biggest problem is not access, it's
transportation and finding accomodations in the Chinese outback. A 300

mile trip in any direction from any of their urban centers on your own is not a matter of having government permission, it's much more a matter of a nightmare logistics planning exercise.

They have huge tracts of wilderness too and a lot of it heavily protected by the gummint as natural preserves. Some of it is completely verboten to tourists because it's home to endanagered species and only accredited researchers allowed into it. The Chinese National Forest Service or whatever it is is not required by law to entertain debates over whether or not ATVs and skimobiles can have access, they just lock those idiots up. Their system ain't all bad.

Whatever the crackpots suggest in reguards to dropping the code test,
the FCC could just
say "element 1 is no longer required after Oct 31, 2003" or such date
that adds up to the
usual comment period and publish it in the federal register process.

When the sunspots are out of season, 28MHz is just another VHF band.
Let the techs have a
portion of 15 meters, so they get a taste of HF DX.

By way of comment, you need work on analogies.

If this were different, there
> would be alot more Hams. And there would be more people operating radios.

Start a campaign, Vipul. Make it your life's work. Everyone needs a
passion. Make this yours.

> Also, there are other interesting <radio> activities one can do.

Nothing is stopping you.

> I can suggest them, but there never seems a proper time to make suggestions.

The proper time is never when a group of hams are gathered specifically
to participate in a contest.

> Hams don't seem to be interested in other radio activities besides
> contesting.

Many hams are not interested in contesting at all. Those who are
interested in contesting and who have gathered to operate in a contest
may not enjoy having you attempt to become a cruise director.

You're a very strange individual.

3388. BPL / PLC is a gross polluting legacy technology - file a comment with the FCC to stop it

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-26 05:21:25 UTC
From: robkemp90210@hotmail.com
Message-ID: <6114e4af.0306252121.51dc27d2@posting.google.com>
Source record: 69538

BPL is a gross polluting legacy technology that has been banned in Japan and Finland.

The FCC has issued a NoI concerning the deployment of BPL (Broadband over Power Line) in the US. BPL operates between 2 and 80MHz and if deployed under conditions advocated by the BPL lobbyists would turn the 2 to 80MHz spectrum into a waste ground of noise at S9 or higher.

It is important to bring to the attention of the FCC (by filing a comment on the NoI) that this spectrum is used for many diverse purposes and is very valuable. There are many better ways of deploying broadband.

Full details are here;
http://www.arrl.org/news/features/2003/06/19/2/?nc=1

Comments are due on or before July 7, 2003. The FCC now is accepting electronically filed comments via its Electronic Comment Filing System (ECFS).
http://gullfoss2.fcc.gov/prod/ecfs/upload_v2.cgi
In the "Proceeding" field, enter "03-104" and complete the required fields. Comments may be typed into a form or you may attach a file containing your comments.

Many good comments have been filed, one you may like to review is here;
http://makeashorterlink.com/?C5C931A05

Please forward this email to anyone who would be interested in preventing gross pollution of the shortwave spectrum.

3389. Latest News - Morse Code Test May Not "Die" at ITU Conference.

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-26 08:32:21 UTC
From: Dwight Stewart <stewart@say.net>
Message-ID: <BB2027D4.1D787%stewart@say.net>
Source record: 69539

At this point in the ITU conference, it does not look good for a change in the Morse Code proficiency requirement as a treaty obligation for high-frequency access. As some may remember, during the last conference, many issues were being addressed by Working Groups at this period of the conference. Virtually none of those, especially the ones relating to ham radio, made it to the floor in time to be voted on by the delegates and were instead put off to be addressed at some later date. If this conference goes the same way, this conference may not be the end of Morse Code testing.

Dwight Stewart (W5NET)

http://www.qsl.net/w5net/

P.S. Gee, it really is fun to stir up rumors and controversy with raw speculation and half-truths. None of us know what is going to happen at the conference, but that hasn't stopped dozens of messages from being posted on exactly that. My message above is just as reliable as any of the others being posted.

Thanks for that info - I agree with your analysis. Seems to me that many developed countries do not see their SWBC needs being as large as they once were. Developing countries are a different story.

2007 is only three years, tho.

IIRC, historically the FCC can't/won't do anything until The Congress ratifies the revised treaty. That will take some time, and petitioning before that time may just works against the petitioners' goal because it shows they don't understand the process.

>Quite a few other countries already have provisional dates next month or

>and above. Any thoughts on that?

Several:

1) As part of its 1998 restructuring petition (has it really been 5 years!?), ARRL proposed auto upgrading of existing Novices and Tech Pluses to General. FCC said no. I also recall a QCWA petition to effectively upgrade pre-1968 Generals and Advanceds to Extra, which also went nowhere with FCC. Even Tech Pluses who were licensed before March 21 1987 have to show up at a VE session to get a General, even though they don't need any more test credits. Seems FCC just doesn't want to do auto upgrades and doesn't care about the closed-off license classes.

2) Without Element 1, there's no reason to differentiate between Techs and Tech Pluses, so the two license classes should be made equivalent in the rules.

3) I'd propose that Technicians get about half of General bandspace on all HF/MF bands, at the current Novice/Tech Plus power level, plus an assortment of modes on HF/MF. Maybe even give them all of 160 and the WARC bands. And since Novices currently have the same HF/MF privs as Tech Pluses, Novices should get the same additional privs.

This solves the "refarming" question and makes the privileges more balanced. It also substitutes one set of subbands for another, so overall rules complexity is about the same.

Some might say "Why the giveaway?", but note how many Novices and Techs with Code 1 credit haven't upgraded in over 3 years.

Historical note: I recall that one of the main reasons Tech Pluses and Novices got 10 meter SSB was an attempt to populate the band and impede its use by freeband/cb folks. The freeband/cb folks' argument was "nobody's using those frequencies"

Thoughts?

Hmm . . Gotta be some out there. There were thousands of 'em in the
various radio rows. I'll snoop around this area for both a Q5er and a
decent $100 rcvr. Lotta old coot pack rats around here.

> Just gave my never-been-used 40-20-15-10 parallel dipole to the

I've modeled some parallel-wires tri-banders and it's not too hard to
imagine how the weight can build up fast. Especially if you feed one
with fullsize RG-8.

> Someone else donated the wire for an 80-m dipole.

Seems like you folk have a real organization going, everybody is into
it. Not the case here. I don't know if we even have a local RACES
operation. If we do it really works at being invisible. Political
jungle, the pros don't like anybody messing with their turf, etc. I
butted heads politically with the Main Moose 25 years ago when he was
running the county dispatch operation and he lost. Then the FCC busted
his kid for VHF freebanding with the help of some hams. Now he's the
county gummint EC. Not a particularly good climate for ham
volunteerism.

> I may play around with converting my three-sided long wire to a
> horizontal loop for NVIS.

I have what seems to be a lot of electrical noise around here and am also thinking along those lines

> That ought to work well for state-wide
> 60-m RACES comms if I ever get a HF transceiver.

I just ran into an excellent Ten-tec Paragon which is available for $400. NICE rig.

And I just found out that my FT-847 can operate on the Alaska Emergency freq so I can get on 60m given a snip or two without toasting the TX.

Busy, busy, I'm bailing outta the 'net until after FD.

What does this have to do with "the hobby"...?!?!

If anything, I consider it to be a "gold star" for the ARRL in
that it truly is a democratic organization, and that mediocre or
incompetent elected officals will not be tolerated.

Last I checked the FCC fee for a GMRS Licence was $17 per Year.
Not really that much change when you consider that the ham
magazines (like QST for example - which is now OVER 70%
advertising content) charge much more than this per year for a subscription
which usually ends up get tossed out in the paper recycler bin
after a few Years collecting dust mites and mold. :) :) :) :)

Get the GMRS Licence and broaden your radio horizons.

It says alot about how things are likely
run in the Oregon ARRL Section. (grin)

But then again, as the average active
amateur population in any given area
which are either ARRL members or
representative of the same, rarely exceeds
20% of the aggregate, the whole affair
in the O.S. likely boils down to the usual
state of affairs....

Likely, a collection of grouchy old men who
still smoke tobacco in large amounts, who have
nothing better to do but rag on about esoteric
ham radio related issues, which have no substance
in real life, except that they provide a diversion
from their boring lives, in-between their trips to
McDonalds to get "their" free coffee refills of course
or untill the Manager kicks em out after he's
re-stoked the coffee urn

The "FRS" channels were interstitial frequencies of the GMRS in
the first place. That's why GMRS can still use them.

Only a radio specifically designed for FRS applications may be
used license free. Any other radio is GMRS and must be licensed.

Dwight,

My reply to a few codeless techs that had started studying Morse and questioned if they should continue has been that we don't know when the code will be eliminated and they still might wait around for a few years rather than enjoying HF. I think it reasonable advice. You are correct in that the only thing we *know* is that we *don't* know. Let's see how long this thread gets :)

> Alot of fat and alot of calories.

Probably a lot of bad carbs, too.

So here's what you do about it, Vipul. Next time such an activity is proposed, YOU step up to the plate and VOLUNTEER to do the food. Then make good. Show 'em how it's done.

Several years back, some local clubs banded together for a Field Day effort. At the first organizing meeting, in late March/early February, a local ham stood up and offered to do the food. He had already lined up helpers and a planned menu. Besides the usual hamburgers and hot dogs, he proposed providing fresh fruits, vegetables, salads, made-to-order omelets and pancakes in the AM, fruit drinks and iced teas as well as the usual sodas, and many other healthy alternatives.

And he made good on everything he proposed. Some hams brought food to share, such as home-made hummus with pita bread.

He did this for several years. Sadly, he passed away unexpectedly about 2 years ago, but the job was taken over by another ham who does an excellent job.

> > You seem to want to go to radio activities and do ANYTHING except operate
> >radios!

> I operated radios during the day. I would not like it if I hadn't operated
> radios at all.

Then what's the problem?

For some ham radio groups, outings are partly social and partly radio. For others, the focus is radio and everything else is secondary. The time to find out what an outing is intended to be is BEFORE you decide to go.
>
> There is a time and place.

Yes, and that outing was the time and place for operating radios, making contacts, and running up the score.

> Would you wear a suit at the beach or the reverse?

I'd wear a swimsuit at the beach.

> By analogy, Hams often wear a suit at the beach. If this were different, there
> would be alot more Hams. And there would be more people operating radios.

I have no idea what you are trying to say.
>
> ---
> ---
>
> Also, there are other interesting <radio> activities one can do.

Like what?

> I can suggest
> them, but there never seems a proper time to make suggestions.

The proper time is well ahead of the suggested activity. For example,
if you want healthy food on Field Day, the time to suggest it is at
the first planning meeting, not when you show up at the site on
Saturday morning.

Also, you have to back up your suggestions with WORK. Seems to me you
want to be the idea guy but have others do the heavy lifting. Not
gonna happen.

> Hams don't seem
> to be interested in other radio activities besides contesting.

During a contest, the focus is on the contest and making points
according to the rules of the contest. If you want different rules,
the time to get them changed is well in advance of the NEXT contest.

Field Day is this weekend. I'll be out in Class 1B-1 Battery, making
as many contacts and points as conditions allow. I won't be doing any
homebrewing or ragchewing during FD. Those things will wait for
another time and place.

What will others be doing?

Guess no one is exempt from credit card thieves.

QUOTE FROM ARRL WEBSITE

League Warns of Bogus Solicitation (Jun 25, 2003) -- NEWINGTON, CT. Somebody out there is trying to "sell" subscriptions to QST, but it's not the ARRL. ARRL Customer Service/Circulation Manager Kathy Capodicasa, N1GZO, said she has received several phone calls and e-mails from members reporting the scam."Apparently, there is some kind of bogus telephone solicitor out there trying to get people's names, addresses and credit card numbers," she said. "ARRL does not solicit for 'subscriptions' to QST. Under no circumstances should a member give out their credit card numbers to someone trying to sell them QST."QST is the official membership journal of the ARRL and is not available to the general public from a magazine distributor or publishing house. Should you receive a call from the phony solicitor, Capodicasa asks that you try to get the solicitor's name and check the caller ID box, if one is installed, for the caller's number. The information can be e-mailed to her at n1gzo@arrl.org, or you can reach her at 860-594-0257.

That's probably the thorniest issue arising from this. Maybe the fairest
and simplest thing to do is to give all the Techs the privileges of a
Tech+?

> 3) I'd propose that Technicians get about half of General bandspace on

I think that for the latter reason any solution should give all the Techs at least the part of 10m that the Novice and Tech+ already have.

I'm surprised how much we agree on most of this.

The modification of s25.5 (making code testing optional) was approved
unanimously at the subcomittee level (announced 2 days ago), so is likely
to pass in the plenary session. I am guessing it might take the FCC 12
months to implement, and element credit is good for 12 months. So, maybe
your students ought to be studying theory? Then again, if they can't wait
that long for HF, then by all means they should study code.

Just because you don't hear any transmitting does not mean it is not in use.
There are a large number of guburment users in the 5 Mhz range. FEMA,
SHARES, Homeland Security, US Military. MARS. Just as an example.

Gee guys/gals -- he has so many OPINIONS that by now he is probably really confused. As I told him -- -- write the FCC and get an answer in written form and carry it along with the radio. E-Mail: fccinfo@fcc.gov

It should be obvious the owner doesn't want to spring for the GMRS license fee -- even though he should.

thank you for your information. I did write 24 hours ago and get no
response so far. Do I need to wait for 6 months or longer to get it if
ever, normally?

you are quite right -- if you have to pay the fee even though i don't use
it, i would rather throw the device into trash cans. after all they are
only $9.99 each, shipped!

Anyone who isn't willing to learn Morse isn't all that interested in
the ARS. This is separate to any argument of whether or not there should
be code testing, or whether it is outdated or not.

When it is dropped, we will probably have a quick influx of new hams,
who will probably drop out almost as quickly.

The overall effect is likely to be underwhelming.

The only time I sent an email to the FCC, it took a couple of weeks to get
a reply.

It should be obvious that some people don't want to let go of the "even
though he should" part of your comment. He _should_ get the license to
operate those radios.

When I became interested in Ham radio, I didn't want to wait until they dropped Morse, because I wanted to enjoy it and I wanted to enjoy it soon. Why a person would avoid learning something is beyond my comprehension.

It is nothing short of amusing and disgustiing to see how people can become so single minded in pursuit of something that they will destroy everything else in their way.

No one would ever be allowed to design a system this way, why on earth should they be allowed to do this sort of thing just because the "wires are already there?"

I'll be going out tonight to make sure the site doesn't have any surprises for us.

Tomorrow, I'll be taking the afternoon off, and the team will start setting up as soon as we're allowed to. My personal responsibility is the GOTA station.

Saturday morning we'll finish the setup, and then I'll be the control op for the GOTA station. Saturday evening will be the club pic-a-nic, done up by a gracious member.

Somewhere in there, I'll try to work in a nap. because.....

...at roughly 11:00 local time, the hard core operators step in, and we run the overnight shift. I usually work 80 meter phone until I just can't stand it anymore, usually when it's starting to get light out. Then another short nap, and its back to the GOTA station.

Then comes teardown, when I'm just about worn out. Then back home for a long nap.

We have a goal this year. Last year we were second in our class during Field day.

Morse is not like learning theory. It is a skill, or a knack, something that some people get easily and that others find to be extraordinarily hard. The first group often don't understand the second (not only with this skill, but also with others). None of this should be very surprising to anyone who takes a minute to think about it.

Largely because it comes too late. If this had happened in 1992, as it
might well have if it had made the agenda and that particular conference
had not been postponed by three years, then I think the effect would have
been much bigger. Something else happened in the interim, an explosion in
Internet use, which has changed the landscape.

You are correct. It was very hard for me. 6 months of couple of hours
every day. My hearing problems did make it difficult to learn.

Too bad, eh?

The first group often don't understand the second (not only with
> this skill, but also with others). None of this should be very surprising

Which group am I in? Hint, I think something worth having is worth
working for. I'm pretty sure that plenty of folk do not think the same way.

For better or worse, the code test ensured that those who became Hams,
wanted to be Hams.

> and above. Any thoughts on that?

Automatic upgrades would be inappropriate. There is material on the Tech written that was NOT included in the Novice written. They can take the test. Any Novice that wants to upgrade to Tech (with HF) should already have done so. They've had the opportunity to upgrade to Tech with a single written test for over a decade. They didn't do it so they didn't want it. There is NO need for automatic upgrades. As far as Advanced goes, again, they haven't been tested on material that was specific to the Extra class. Since the reduction of the code to 5wpm in 2000, they've had 3 years to upgrade with a single written test if they wanted to. They didn't do it so they didn't want it. Again NO need for an automatic upgrade.

Should the Element 1 requirement be dropped, the simplest thing is to simply keep the bands and privileges of Novices, Generals, Advanced and Extras exactly as they are now. Change the Tech to get the privileges that the old Tech Plus license used to have. So they would have the 10m voice and code privileges plus 15m, 40m, and 80m code privileges.

This would keep the rule changes simple and accommodate all current licensees.

Perhaps I should have added IMO. That's what it is, an opinion. But
it's backed up by life experiences.

I've heard many excuses for why people don't quit smoking, lose weight,
get in shape, the list goes on and on. It becomes pretty clear that in
reality, they don't really want to do these things, or else they would.
And as a former 3 pack a day smoker (now 26 years without a ciggy) I
know I did not quit until I wanted to.

And this is a FACT. Anyone who does *not* get their General or Extra
ticket until the code requirement is dropped does NOT want to get it
badly enough that they will take a Morse code test. In other words, they
are not interested if it is there, and interested if it is not,

Comparison of Ham radio to the internet is something that I have always
found amusing and a little suspect. You don't need any special training
or talent to surf the internet. I know, I get a lot of people out of
jams on their 'pooters. They don't know how to set up an email account,
but they can click that mouse button as good as I can.

Despite a lot of people's thoughts to the contrary, the Internet is not
terribly hi-tech. Probably 80-90 percent of Internet users would never
consider being a ham.

Hey Steve, Thanks for the respectful reply.

Answer me this:

1. Will you get your General or Extra ticket *before* the Morse test is dropped?

2. Will you get your General or Extra ticket *after* the Morse Requirement is dropped?

Answer key

1 = yes

2 = Has to be no because you already got it.

You want the ticket badly enough to take the test.

1 = no

2 = yes

You do not want the ticket badly enough to take the Morse test, and you are willing to wait until it is dropped.

1 = no

2 = no

You do not want the ticket badly enough to take the tests to gat a General or Extra at all.

Refute this.

But don't "give away" anything to those that couldn't be bothered to upgrade. The Novices could have upgraded anytime with just a written to Tech Plus (or equivalent) for over 10 years now. If they haven't done so, don't "give" it to them. Besides, there's info on the Tech test that was never on the Novice test.

Please consider reading "The Art and Skill of Radiotelegraphy". While the very highest levels (such as world record setting) takes not only training but talent, normal levels of usage only require training. The biggest problem most people face in learning code is unrealistic expectations. They try for a week and think they are a failure when they simply haven't given it the proper amount and type of study. It takes the normal person 30 hours of study and practice (see the book "Morse Code, The Essential Language"), if done correctly, to achieve a reliable 5wpm. No talent or knack is required. The first book that I mention indicates that a very ordinary untalented person can achieve a reliable 20wpm to 25wpm if they go about it the right way.

Cramming doesn't work for Morse code as some people can get away with for written material (which of course they forget immediately following the test as it is only in short term memory when they "cram"). To get to 5wpm, a person should put in about two 15 minute sessions per day, every day (or nearly so otherwise you start to forget) for about 60 days.

No magic or talent is required to master the basics. Only if you want to be a superstar does talent come into play.

Depends on the training level. I did some experimenting with that a few years back. Basically I set up a LED that was fired by the sound of the CW note, via a op amp as I recall.

In anycase the LED fired in sequence with the incoming tones. I found that I could do reasonably well that way. At times almost as good as by ear.

I think with practice it would be a way to do it.

But.....trying to read 'dot and dash' off a piece of paper is incredibly slow to me.

It helps that the County Emergency Manager, the EM for the Sheriff's Department, the EM for the county seat city, and the EM for the county-wide fire department are all hams. As are several staff members on local hospitals and the county-wide Consolidated Communications Agency which does the 9-1-1 as well as the tactical dispatching. That's how we get them to spring for all the installed gear, and one of our movers and shakers does extremely high quality cabinet construction in his garage so the fixed installations have standardized operating consoles.

Remember, too, that the "Silicon Forest" is home to large Intel and Tektronix facilities with their attendant ham population and clubs. Intel, because of the extremely nasty stuff that their R&D chip fabrication units use, has a very extensive disaster plan using the hams on staff to provide communication. totally integrated into the County plan.

All well thought suggestions. But its all been brought out before. And
the FCC probably could care less.

This whole entire fiasco of privlidges and class was brought on by the FCC in the first place. Its called incentive licensing.

Why not just drop it all back to the 50 and early 60s? When I got on there was;

1. Novice: CW ONLY 80/40/15m. PHONE 2Meters.
2. Technician:Vhf/Uhf only. ALL amateur privlidges.
3. General: All HF and V/UHF frequencies. 1KW DC input
All modes.
4. Extra: EXACTLY SAME AS GENERAL.

There was a Advanced, renamed from 'Class A' with same privlidges as General and Extra.

Prior to my arrival there was other arrangements, such as no Novice, No Tech. etc. Someone from pre 1961 please chime in here.

The problem as I see it is INCENTIVE LICENSING and its FAILURE.

We need to drop back and punt. Go back to a three tier license structure; Class A, Class B, Class C.

A= Beginners, similar to Novice AND Technician together.
a) Delete Novice sub bands, and Novice license in 5 yrs.
B= Basic, similar to General . But with POWER limitations
instead of frequency limitations within the present HF
allocations.
C= Advanced, place ALL present Advanced and Extras into
this one. Full amateur privlidges.

Now here is the kicker. All the licenses above would grant only SSB/AM/FM privlidges.

ALL OTHER MODES would require a applicant to demonstrate profeciency in the mode he wants to be endorsed for. Test, written or other (such as CW).

So no one needs do what he don't want to.

Just some thoughts.

Dan/W4NTI

Pre 1951, you mean.

Class A - all amateur privileges
Class B - all except no phone below 10 meters
Class C - Class B exam taken before a volunteer examiner if the
applicant was more than 75 miles from the nearest FCC
quaretrly testing point. (Later changed to 175 miles)

Note that there was no 15 meter band (let alone 13 and 17 meters),
and no phone segment on 40 meters.

If we want to keep the VE program, going back to the pre-1951
scheme would result in 2 classes, A and B. B would be the beginners
license with limited privileges (maybe nothing below 28 MHz) and A
would be the full-privilege license.

100 percent correct! And that brings me back to my statement that
anyone really interested in being a ham will take the effort to learn Morse.

Perhaps the astute hobbyist would rather get a computer and surf the
web? Not much effort to learn that, and they may feel their time better
spent looking at... well, whatever people look at while surfing.

Wrong answer. The answer is yes. If you own a radio capable of GMRS and FRS operation, you're going to use the GMRS capabilities. Period. E N D O F S T O R Y. Get the GMRS license. If I were an FCC official and I caught you with the radio and you didn't have a GMRS ticket, you'd be getting the book thrown at you.

BTW -- these combo FRS/GMRS HT's are being sold for a specific reason: to get as many owners "bootlegging" on GMRS as possible, in order to force the FCC to throw up their hands and de-regulate GMRS the same way they deregulated CB in the 70's. I hope that what they do instead is make enough "examples" out of said bootleggers with Mega-buck fines that this doesn't happen, and GMRS remains the controlled, licensed, and regulated service that it is.

IMHO, possession of a transceiver capable of use on GMRS frequencies
would imply that it is being used on GMRS. Therefore, the license would
be required.

>I thought the comment period was longer. Can anyone here give us a
>definitve answer to that?

First, the revised treaty has to be ratified by The Congress.

Second, FCC has to decide whether dropping Element 1 requires the NPRM process.

If FCC decides to do an NPRM, somebody has to write it up, then there are
comment and reply comment periods of length decided by FCC. Probably on the
order of a few months. Then FCC processes all the comments (couple more months)
and issues an R&O that changes the rules.
>
But FCC could decide that they don;t need the NPRM process. For example,
changes like new VE fees and QPC pool changes don't get NPRMs, FCC just does
it.

Seems to me that FCC could just say, in effect, 'we considered all the codetest
arguments, pro and con, back in 98 and 99. We said back then that the treaty
was the only reason for a code test, and we reduced code testing to 5 wpm
because that's the minimum we think meets the treaty. Without the treaty,
there's no reason, so the code test is history." Element 1 gets dumped by
executive order and that's that.

But first the revised treaty has to be ratified.

>>>If I were writing a petition, I would put in automatic upgrades for

Bob:

The time I spent learning the Morse code and increasing my skill in
order to upgrade to 20-WPM Extra-class status was in investment that
paid off in what has become, so far, over 20 years of enjoyable HF CW
operation. I'm certainly glad I didn't decide to devote that time to
"something else" -- especially if that may have been hours of yakking
into a microphone!

The only "total and complete horse manure" here is the notion that a so-called amateur radio operator who hasn't mastered the basic communications skill of Morse/CW operation is qualified to be a county Skywarn Coordinator.

Alun:

In that case, I guess you could say that I am one person who represents
both groups. I spent fourteen of what could have been the best years of
my ham radio career being a person who completely hated the notion of
having to learn the Morse code in order to get an amateur radio license.
I tried to learn it several times, to the point of having built homebrew
code practice oscillators on two separate occasions, years apart. You
see, I always enjoyed the technical and project construction aspect of
the electronics hobby, but I wanted to get involved in ham radio without
having to learn how to make and copy those ancient, useless beeping
noises. After all, we had just put men on the Moon and brought them
back, and we had computers that could fit into a small house! What the
heck did we need to know Morse code for, anyway? Then, one fine day,
I "found" a ham radio operator in my dormitory day room at Andrews AFB,
MD, where I was stationed in the Air Force at the time as a Sergeant.
This guy walks in and is carrying a new Tempo 2-meter HT, and we start
discussing ham radio. He takes me to his room and shows me his very
neat station setup, with 6- and 10-meter capability and an HF longwire
in the works. I told him I've wanted to get into ham radio for a long time,
but I didn't want to be bothered with the "beeping." I could never learn it,
I had a mental block or some physical problem that prevented me from
copying it, or whatever other excuse I could think of -- but I was sure I
would have no problem talking into a microphone! He said, and these
words ring in my ears to this day, "Well, Larry, a lot of people are like
that, but none of them are hams!" I kept thinking about that, and about
a year later, I decided that I'd made excuses long enough. I talked another
friend of mine into joining me in a Novice class at the local radio club, and
within a month, we both had our Novice tickets. The same day we got
our tickets on the air, I made my first CW QSO on the club station. I was
a Tech in a couple of months, General in a few more, Advanced and Extra
came very quickly due to an upgrading "race" I was in with another new
ham in our club at the time. Throughout it all, I made approximately 500
HF/CW QSO's at our club station and on my own mobile HF station I had
built out of my 1978 Plymouth Horizon.

The funny thing is, it never occurred to me until years later that I had somehow made a miraculous recovery from all of the physical and mental "problems" I had been having with learning the Morse code! In fact, I went from zero to 20 WPM in four months. What got me "hooked" was that first nervous, sweaty-palmed CW QSO, which happened to be with LU2DSL in Argentina! What kept me going was the requirement to pass the 13- and 20-WPM code tests for my General and Extra tickets. What surprised me was I passed the 20 WPM the day I went to the FCC office in Baltimore for the General, but I missed the Advanced theory test by two questions, since I had only been studying for my General up to that point. It was just over a year before I finally went for the Extra, so I had to re-take the 20-WPM test, but that was no problem by that time!

Now that it seems that the ITU will eliminate code testing soon, all I can say is that I really feel sympathy for future new hams who will never have to go through the same great process I experienced on my way to full amateur privileges. They may think that this is some kind of victory for them, but in reality, all they are is a sorry bunch of losers!

No question about the license beng required, but it's curious that FCC would
authorize a radio that could be so easily misused by so many
ordinary people who have no knowledge of the difference between FRS and GMRS. I've
heard some buyers say it's OK to use the dual radios on FRS with no license, and
one even said the radio was designed to reduce power to make it legal on FRS.

Begins to look like maybe FCC is ambivilent on the matter.

> With all that power super-gain antenna I don't want to take any
> chances. :)

I hesitate to post this, as it's about ham radio gain antennas, but it _is_
about a super-gain antenna, so I'll yield to temptation.
````````someone else's report````````````
Subject: Antenna Design

Greetings from Tokyo and all the members of TIARA (Tokyo International
Amateur Radio Association). I know I promised you a series of articles
on Japanese amateur radio, but there is something so exciting I just
have to take a break and tell you about it.

It all started with the work that Ed Coan (AH7L/7J1AAE) did on antenna
pattern plotting using his personal computer and the A-to-D converter in
his FT-1000. The circular, and even backward antenna patterns of some
of our local TIARA club members brought home the point that what a good
station needs is a good antenna. Ed's antenna looks great and the
results verify it. He works regular schedules into Colorado and Maine,
just like sunspots don't mean anything. My mini-beam just could not
compare.

Well, I got to thinking about what we Tokyo apartment dwellers could do
and realized that space is THE problem. How do you fit a full-sized beam
on a balcony? Loading coils are the answer and the problem at the same
time -- the antenna radiation resistance drops as reactance is
substituted for length. High current loops develop and the power is
dissipated in the antenna instead of being radiated. If only the antenna
didn't dissipate the power. Hmmm....let's see, P=3DE2 /R; now if R
were 0 then...

From my work, I have some contacts in research groups over at Tokyo
University. Better yet, I knew a Japanese ham that is a graduate student
there. The thought running through my head was to build a
super-conducting antenna. This requires cryogenics, i.e. temperatures
around minus 279 degrees Centigrade. I was able get the university folks
interested in the project and we built a 10-meter dipole test silicon
wafer. They put together a lot of serial coils by "re-work" on the
wafer; they were able to connect them so we had a super-conducting yagi.
I took my TS-930 transceiver down to the lab for the first tests, but
before we could test it, actual measurements showed it was resonant on
3.126 MHz. It seems that the normal equations for inductance don't work
with super-conducting materials =97 you need a lot fewer turns to get the
````````

same results compared to room temperature. Many measurements and trials later, we had a ten-meter resonant wafer. This time we put a 40-element beam on each wafer and stacked 4 wafers in the same assembly. That made a 160-element array on 10-meters in less than a half-foot cube (15 cm3).

The first test didn't go too well. I connected my TS-930 to the super-conducting wafer antenna and tuned it for 10 meters. At room temperature, we couldn't hear anything. Using a heat pump, the lab technicians started lowering the antenna's temperature toward the super-conducting region. I was really impressed by how small the equipment is, and started thinking it might all fit in the shack. Just then, the TS-930 froze solid, which had a negative effect on its operating characteristics. This wouldn't be so easy after all; the coax connection would need some study!

We reworked the wafers to put inductive coupling on them, but I could find no way to efficiently couple to it from the conducting array. Fortunately the lab technicians came up with a new ceramic material that passed RF but not heat. Probably, something that Kyocera invented just for this use. I sent the TS-930 to the ham shop in Akihabara and asked them to touch it up for me. My friend Suzuki-San, JH1WWC (store manager at the ham shop), asked exactly how the paint had been peeled off around the coax connector -- lightning maybe? No, I assured him -- just low temperature exposure, without saying how low the temperatures were. The project had to stay secret and besides, Suzuki-San can repair anything!

Since it looked like it might be a while before the TS-930 would be repaired, I brought out my TS-940. I had already placed an order for a Yaesu FT-1000 anyway. After verifying that in the super-onducting range the antenna was resonant on 10-meters, we connected the TS-940. The ceramic material worked and the rig operated well as we began the cooling cycle. The band seemed dead even with the antenna at -150 degrees C. It took another 10 minutes to get to the super-conducting range -- then the TS-940 blew up. It seems our antenna had a bit more gain than the TS-940 front-end could take. Later measurements showed 500 volts coming out of the coax. A little hard to believe, but then what do I know about cryogenic LSI antenna technology? The TS-940 was also returned to Suzuki-San, but this time he frowned a bit -- the front-end board did look like it had been hit by lightning. Not to worry, Suzuki-San can repair anything!

The FT-1000 arrived just in time to be able to continue experiments. We built a QSK attenuator to protect the receiver. With the LSI wafer antenna still inside the lab, we decided to try to make a contact on 10-meters. What a shock when we got it working! The first thing we heard was a couple of W2's talking locally on 10 meters and that was with 80 dB of attenuation. We had the antenna array on a rotatable mount; I moved it about a half-degree and the W2's disappeared. What beam width! We tuned them in again, and they were just about to sign off, so we thought we would try to work them. The rig was tuned up at 50 watts on a dummy load; we switched in the wafer antenna and gave N2BA a call. The

noise was unbelievable -- an ionized ray shot out from the antena and hit the wall of the building. Before we knocked a hole in the band, we took a piece out of the lab wall! Ever wonder what an antenna pattern looks like in three dimensions? There was a oval hole in the wall of the lab -- about 1-cm high by 2-cm wide. We cut power quickly. N2BA came back on frequency a few minutes later and said he was using his back-up rig; something had taken his main rig off the air. For some reason, the station he was talking to never came back, so we decided not to transmit again until we knew for sure what was going on.

As near as we can tell, the antenna array has 620-dB gain over a dipole, but with a beamwidth of 0.75 degrees using the 60-dB points. With 50 watts output, the effective radiated power is 55 quadrillion watts at the center of the beam (5.5 with 13 zeroes). As soon as the University realized what we had built, the entire project was taken away from us and turned over to the Japanese Self-Defense Force. Amateur radio "tinkering" has contributed to something, but I am not exactly sure what. I haven't the slightest idea what was in those wafers or how to build another set. Do you think someone may be interested in this idea for Star Wars/SDI?? What I'd give to use a much smaller set in the next CQ World Wide Contest!

A few months later, the University contacted all of us and asked just how close we had been to the antenna when operating. As best as I can figure, we were in the null behind the array. From what has been said so far, it looks like a secondary use for our antenna may be as a mass sterilizer, but confirmation will have to await the results of our medical tests. If our antenna ever hits the market, it looks like remote operation may be desirable.

As I am writing this, I have been informed that my friend Suzuki-San can't fix everything after all. He's written off the TS-930 and TS-940, and I just found out that before the university terminated the project, they tried one more time with my FT-1000, but without the 100-dB attenuator to protect the receiver. Its front-end now matches the 940's and it looks like it will be a while before I am on the air again.

Yep... I am fully aware of that, I was merely adding to the list of who he
is a "thorn in the side of."

Rush has admitted himself that he is an agitator. That is the only
redeeming quality that he does have. Wayne is too... as far as his
non-amateur radio interests I could care less. I don't care about your
non-amateur radio interests, unless I ask either.

True, but that is also when computers started to become part of ham radio so I would expect some incorporation there. If it dominated the whole magazine on a regular basis, I would have issue there.

As far as the basic construction articles, I actually think that is a good thing. I would like to see more of that for the newer hams, as they can start small and work up. (in learning and project size)

Around here there is at least a lethargy. Come to one of the three local club meetings and you would think it is a scene from the movie "Coma." Half these people seem to just sit there like a deer caught in the headlights. It is almost like I want to bring in some firecrackers or a starter pistol just to wake people up. There just is not any energy or enthusiasm anymore. I am active in a couple clubs and visit some of the others on a regular basis and try to help out where I can, so yes, I do get involved.

> to trained professionals.

What they are looking (current project) is a device that is self-propellable to the site using ATV to monitor the scene, from a safe distance. One prime example is a few years ago they had a haz-mat incident involving a Dow railroad tanker and they wished they had something that could watch the gauge on the side. A self-propelled device, with a video device would have served well. One thing that is being looked at is the larger versions of the remote-controlled model cars as the "propelling" device.

> What you're proposing is illegal in amateur radio.

No... it can be sent over packet. Any information regarding patient information WHATSOEVER has to be dealt with carefully though, and I would not send it over voice. I should have also included ANY OTHER sensitive communications in that as well. If you are working a disaster, and are the

primary communications unit, assuming that public services freqs. are unusable, you very well may have to pass on patient information, albeit statistical information at times, for the emergency services groups to a ham at the recieving hospital. It is very concievable.

As far as the protecting the communications, packet is also a good start. It helps because not everyone out there with a scanner can easily pick up that information. My intent of the original post is that we are getting further and further behind in our digital communications part of the hobby. Aren't we supposed to be the innovators??

>
> That would be cool!

Definitely, as stated in another response, we are possibly looking some type
of a remote-control car to do this. The robot type things used by
bomb-squads are cost-prohibitive. Nice thing about this is that it can
monitor the scene without putting a person in danger to monitor the scene,
or for that matter setting up a tripod with the corresponding equipment
close to the scene. Just drive (via remote control) the damned thing up
there.

>

Yeah, that would be nice. The speeds allowed in ham radio seem to equate to
modems used for computers 20 years ago.....

>
> > *Protection of communications from the general public (and media) until
it

> hmmmmmm, now you're getting into a really gray area. The amateur bands
> are by definition open to whoever has a radio. Anyone can listen.

That is why they should be sent over something digital like packet or
whatever the improvement over packet might be. After all, even sending a

"fatality" list which is something that should not be done over voice, and
in the technical sense is patient related information of which you do not
want people like the media getting ahold of prematurely.

>
>

No... just improvement to our own skills and abilities. This talking point
was not necessarily directed as a problem with hams, just an important
point.

>
>
> How much faster doya need? I'm not sure how to speed up RF! (cheap one,

>

Speed can definitely be improved upon. Christ, the average person can send
data over the air now legally a hell of alot faster than any ham radio
digital mode, without a license. So why the hell are we so limited?

Understood as the bombsquad robot thing is definitely gonna be out of the
price range but a remote control car (the larger scale ones) may suit the
needs possibly.

>

What type of files can be sent, and what size? What types of speeds with
Hellschrieber??

>
> > *Protection of communications from the general public (and media) until

> even if it was.

Show me a ham group working a large-scale disaster that has not?? Injuries, triage info, fatalities are information that *may* have to be passed as traffic and need to stay in a mode that is not generally accessable to every nut (or media person) with a scanner. Packet, albeit slow is okay for this, as it is a legal means of encrypting the data.

>

Yep - but it's sad to think of that sort of thing as 'old school'.

After all, ARRL field appointments are all unpaid, volunteer jobs,
right up to Director. One wonders why an unpopular appointee, faced
with a recall vote, would not know he/she would be better off stepping

down.

All of which can be fixed, of course. There was a "refarming" proposal
some time back, but FCC hasn't ruled on it yet.

> > 2007 is only three years, tho.
>

I'm figuring that it may be 2004 before the treaty is ratified by The
Congress.

Usually, but not always, such ratifications sail right through.
However, sometimes they get stalled by higher-priority items, or the
ratification gets tacked onto something controversial and there's a
delay. See K2ASP's story of Senator John Glenn....
>
> >>Quite a few other countries already have provisional dates next month

> slows things down.

Which can be a good thing. It's not the ideal system but it's better
than having them make changes without any citizen input.

It's important to remember that none of this is front-burner stuff to
the FCC. To FCC, amateur radio is a small-potatoes legacy service that
generates a small amount of revenue. They're not anti-ham, they just
have a lot of other things going on.

How is it thorny? The only difference in testing between a Tech, Tech
Plus and Tech-with-HF is that the latter two have passed Element 1. If
Element 1 goes away as a license qualification, why not just give them
all the same privileges?

> Maybe the fairest

At the very least.
>
> I'm surprised how much we agree on most of this.
>
Not at all. The thing we need to be doing now, IMO, is developing a
coherent proposal that goes beyond just "dump Element 1" and that can
gather wide support in the amateur community. We know FCC isn't going
to do it.

Of course if by some miracle Element 1 survives, there will be strong
opposition to any change so soon after the last restructure. But
without Element 1, it makes little sense to have the Tech so VHF-UHF
heavy and HF/MF light.

Well each individual has to decide if the investment is worth the return. However that is true in any activity in life. Is the time I spend practicing my clarinet worth it? Is the time I spend reading worth it? And so on. If one is looking at just passing the code to get to the General license class, 30 hours is not an unreasonable investment in time. So I tend to share the opinion that most of those who are "waiting for the code to be dropped" just don't care to put a priority on getting the upgrade (or in more basic terms, don't "want it enough"). Of course some will learn it faster and some will take longer. I would be more than happy to elmer anyone who is having a tough time of the code.

You asked the question about how long it takes the average person to get do a decent code ability. Well here's the info from "Morse Code, The Essential Language"

WPM Average hours to learn
5 30
10 60
15 95
20 150

A lot of casual conversations are conducted around 13 wpm to 15 wpm. So that is a reasonable level to achieve if one has the interest. And it tends to come naturally once one gets on the air and starts using the code if they stick with it.

Also referring back to "The Art and Skill of Radiotelegraphy," the author has found through his research that once the 13wpm level is reached, the person has learned it well enough that even if they don't use it, they are not apt to forget it. They may get rusty but they retain it.

If the morse requirement gets dropped, it looks like it's going to be as we slide into the bottom of the sunspot cycle. I think a lot of people will upgrade and then be disappointed at how "dead" so many of the bands are since they will have little experience with the vagaries of HF propagation.

That would be the fastest way possible to kill off CW. I'd do it the other way around. Let them do all the CW they want but no SSB/AM/FM until they've actually passed the code.

Besides even just going to written tests only, people will still have to do things they don't want to. People will complain why do they have to study on packet or other digital or satellite. They'll complain about having to study basic electronics. They'll complain about studying propagation. They will even complain about studying rules, regulations, and standard operating practices.

In any field of endeavor, the material to be studied needs to be determined by the experienced members of the group not the beginners. In school, we require students to study a basic core of subjects. The students do NOT get to determine what the core studies are.

True. After all, the only reason the FCC kept 5wpm was because of the
treaty.
The call for rational reasons to retain morse testing was done in
NPRM-98-143.
Does anyone think there are any new reasons to retain code testing that
haven't
already been run through the FCC comment process?

Probably an assumed or expected noncontroversial action.
FCC could begin the process in anticipation of congressional
approval.

> Second, FCC has to decide whether dropping Element 1 requires the NPRM
process.

As you note below. I think that decision has already been
made in 98/99.

My research has indicated that "gruntle" does indeed exist! According
to Merriam-Webster Online:

grunï¿½tle
Pronunciation: 'gr&n-t&l
Function: transitive verb
Inflected Form(s): grunï¿½tled; grunï¿½tling /'gr&nt-li[ng], 'gr&n-t&l-i[ng]/
Etymology: back-formation from disgruntle
Date: 1926
: to put in a good humor <were gruntled with a good meal and good
conversation -- W. P. Webb

It would appear that despite its somewhat salacious sound, that
gruntling is not a specific action. So that much is good.

Let us apply this to the task at hand.

Can Len or Brian B be gruntled?

Brian:

Always at the ready to engage in combative behavior here, and in some
of my own discourses with the man, ending in re-iteration of the same
points to the point of thread exhaustion, I believe that under some
circumstances it would be possible to gruntle this individual. most of
the controversy seems to be of a "have you now, or have you ever
operated from......." sort of nature.

Len:

Here is a person who thrives on his disgruntlement, a veritable master of discontent with the Amateur Radio world. Having perfected his trolling art here, (although I fear at great personal self-damage) he waves his banner of disgruntlement with great pride.

Chance of Gruntlement? 0

Increasing ham numbers is only one goal of the change, and even that is mainly limited to some arguments here in the United States. World-wide, the change is more a recognition of the lesser role of Morse Code in radio as a whole - the decreasing need for a pool of radio operators with that skill.

Not always true. Years ago, military radio operators, for example, learned code as part of their military training. To become a ham, the only additional thing they needed to learn was the material on the written exam. As such, it was no more extra effort for them to become a ham than it would be for those if code is dropped as a testing requirement. In other words, since they did not learn code to become a ham, their knowledge of code did not prove their desire or lack of desire to be hams (the testing requirement only affected their ability to do so). The same could be said for those who initially learned code to work for government or industry and later became hams.

Agreed. I almost walked out of the testing center
when I was told that 5 WPM could be memorized. No
skill was really necessary at all. I am having a
hard time at it. This comment was from a General,
who has not passed his Extra. Surely, it could
be memorized. :)

Teaching by phonetics did not work for many students.
Now, Massachusetts has devised newer methods to encompass
students that are tactile or visual learners.

Bill

Yes, of course if a person already knew Morse from a diffferent area,
it would not be any particular feat to take the code test.

Some people will indeed have a hard time with Morse. We do not all process sound in the same way.

I am a visual artist, highly vision oriented, and I have been hearing impaired since early childhood, and after getting tinnitus at a bit older age, I can attest that my brain does not process sound as does those who pick up Morse code easily.

After my initial frustrations with Morse, I came up with a theory of why this was a problem, at least in my case. I believe my brain does not pay as much attention to sound as it does my other senses. I think a very rough analog is a reciever de-sensing. This is due to two separate tones, one in each ear, and peoples voices sounding kind of muzzy, some worse than others. So after 40 some years of this, when I was tring to process Morse, with it's three different states, (short, long, and wait) my brain had to be retrained. My proficiency goes waaay down as I fatigue, and I cannot have any noise distractions

As an experiment, I may try a visual Morse display. Was it Dan who mentioned a device to pick up the sound, then flash a light? That may really increase my enjoyment of Morse. I doubt that the speeds can get very hig, and I don't know what blinking will do, but it sounds like a fun experiment.

But Keep at it, William. If you work at it, it will happen eventually.

Jim> Yep - but it's sad to think of that sort of thing as 'old
Jim> school'.

It is, and it isn't. It's sad to think that it's necessary at all,
but the entire 'elmer model' of amateur radio operators relies upon
having elder members passing on their experience, and the "word to the
wise" approach would work for everything from "use a dummy load
instead of tuning up on top of someone's conversation" to "you are
losing the confidence of the members due to your style of leadership".

Jim> After all, ARRL field appointments are all unpaid, volunteer
Jim> jobs, right up to Director. One wonders why an unpopular
Jim> appointee, faced with a recall vote, would not know he/she would
Jim> be better off stepping down.

Ah, that's easy to solve. Sometimes people are so convinced that they
are Right and that the people will handily defeat a recall election
that they won't bother standing down. Besides, even if he won the
election, it'd make for some serious friction when working with his
peers, and he'd have to have a lot of charisma to overcome the damage
to his reputation.

On an unrelated note, I'm not very excited about the prospects for a
recall election here in California. It'll cost a great deal of money,
and whoever wins really loses. If Davis wins, see above as for what
happens to him. If the other guy wins, then he's got a whole lot to
learn in a short time, and any quick measures he takes to fix things
are more likely (in my opinion) to break other things worse.

ObOnTopic: At least the antenna bill (AB 1228) currently before the
California Assembly has no fiscal component, making it less
likely to get defeated as a cost-cutting measure.

Jack.

In my case it required a lot of outside help to pass code. It simply
wasn't something I could do on my own, whereas I never needed any help
from anyone to pass theory. Your mileage may differ!

That last part is certainly very true. It may definitely lead to a higher
attrition rate amongst all the new HF ops.

Completely and totally wrong. Military still uses HF, overseas aircraft
flights use HF. etc.

So what is wrong with being a backup status? Your point is?
Oh I get it. You don't think there needs to be a backup in case the bird
falls from the sky, eh?

Morse sent visually must be sent at a slow speed or the eye runs it all together as one light. Remember that is how "motion" pictures work, a series of still frames sent at a speed that causes them to blend.

Anyway, Morse at 5wpm is definitely possible with lights. At 18wpm, it is not possible. I don't know whether 13wpm is possible or not. I read about it years ago but can't remember where the break point was for the visual blending.

Morse code ability does that to a person? :-)

MANY years ago, Dwight. :-)

I had 5 different MOSs in radio before 1956 and NONE of them involved
any sort of morse code use or training.

>To become a ham, the only
>additional thing they needed to learn was the material on the written exam.

>hams.

Well, you and I both know that one MUST subscribe to what the
self-styled Rules of US hamdom decree...morse code ability is at
the very heart of being a "real" radio amateur. That is a prime
requirement.

Morse code ability assures the ham of being primo, grade A, the
"superiority" measured by his morse skill.

It's all about working DX on HF with CW.

Anything else is for snit. :-)

No, the question is not of "gruntling," hockeypuck, it is a question
of how salacious you can become in being nasty to an NCTA.

> Brian:
>
> Always at the ready to engage in combative behavior here, and in some

Poor baby Mike...can't stand an opposing opinion so he throws more
snit on the person of his opposition. <SOP>

> Len:
>
> Here is a person who thrives on his disgruntlement, a veritable master
>of discontent with the Amateur Radio world.

Tsk, tsk, tsk. Mike is striking to become the fifth wheel in the Gang
of Four who wish to take over this newsgroup (by any means possible).

My only discontent is of two things: Morse code testing for a license;
the self-righteous, self-important "superiors" who think they Must
rule on ethics, mores, the "ham community" group think.

> Having perfected his
>trolling art here, (although I fear at great personal self-damage) he
>waves his banner of disgruntlement with great pride.

Not at all, hockeypucker.

This isn't "personal abuse," it is merely a newsgroup. Mostly it is
a waste of time considering the regulars and their insistence on
"regulating" all content not to their liking. Because of that terrible
need for others to Fight in here, I don't bother looking in daily.
If I had a need to fight, I'd go to the Golden Gloves or something
like that. :-)

Well, strange phenomena happen. I attended a hockey match
last month and a Game broke out during a fight! :-)

> Chance of Gruntlement? 0

Chance of Mike Coslo joining the Gang of Four: Very good.

Mike is getting down to the nitty-gritty of Personal Insult tactics
when he can't justify his morse code views or claims of amateur
radio "superiority." Any day now Mike will hop on Larrah's big
superior ham bus beeping its way through ancientville. :-)

If you REALLY wanted to keep on smoking, you could have kept
at it, practicing day and night. Instead, you opted out, chickened
out, because you couldn't keep on. Read "The Art Of Keeping
On Smoking" by A. Coffing Hacker.

Such a good "pooter" Elmer! We are all proud of you, Mike.

BTW, I made my own PC back in 1976, laying out and etching
the boards, soldering in the components, programming my own
monitor chip (what is now referred to as a "BIOS"). Motorola
6800 microprocessor, sort of a "QRP CW rig" equivalent. Do I
insist that all others emulate me? NO.

BTW2: Only girls use the term "pooter." Think about it. :-)

I know the individual both from ham radio and professionally. He
did not think that he would be "unhorsed" but there were valid
reasons for that which are now electrons under the wire, so to say.

A lot of us had mixed feelings - but the electorate spoke.

Motion picture frame rate is 24 frames per second.

The "visual blending" (actually 'persistence of vision') threshold
is roughly 15 to 20 images per second, depending on the
individual.

Ten "dits" per second should be at a fairly fast WPM equivalent
rate in morse.

But *WHY* is that morse code necessary for effective radio
communication?

Note also that there was at least one Petition for Reconsideration wrt the loss of the 13 and 20 wpm code tests. Despite lots of support, FCC simply said no, it was gonna stay 5 wpm only.

>
>> But first the revised treaty has to be ratified.
>
>Anyone know the time interval it took after the last WRC?
>
I recall that ratification of WRC-79 was delayed because of some action by Sen. John Glenn (help us out here, Phil/K2ASP). And it took some time for us to actually get the WRC bands after that.

But that was a different time and different changes. If the decision is to drop code testing completely, FCC doesn't have to write any new rules, they just have to eliminate Element 1. I recall that some time back we did a quick flip through Part 97 and noted the sections that would have to change or be deleted. There weren't very many.

And I'm quite confident that you, Bill, will see to it that a suitably written proposal is in FCC's hands on the first day it is advisable to submit one.

And those who peruse the CW portions of the bands will find signals present, if
weak, where there are none to be found on the SSB portions.
Those who learned the code and are adventurous enough to want to try to use it
will find plenty of contacts while the SSB-only operators will sometimes
have a much more difficult time of it.

His childishness was obvious from the beginning. The only question is: Is he really worth all of the trouble? You could complain to abuse@altopia.com (Chris Caputo), and if you include enough of his posts which originate at Altopia, you can probably have his crossposting ability turned off. The trouble is, he is also using whatever remailers are available to him, and Caputo has no control over them. You would then have to persue him one remailer at a time.

Instead, may I suggest that you go to http://cws.internet.com/news-xnews.html and download the free newsreader called "Xnews?" It can filter out entire sites, rather than ever-changing nicks, and filtering on the basis of the originating site will also allow the real nym owner's posts to come through unimpeded, while the child's posts are blocked.

You would set up Xnews to filter on the basis of the Path header and kill any posts which contain any of the strings

sewer-output
gilgamesh-frog
uncensored-news
nym.alias.net
alt.net

in that header. That will kill all posts from all of the various servers that the child has been using, NO MATTER WHAT HIS NYM, and will allow everyone else through. I'm filtering that way now, and that's how your posts get through while his posts get killed.

In the meantime, be aware that the child *is* being persued, but that it will take time before any results are evident.

Sounds great. Can't do it on this PC, but I have another that I can... will give it a try.

>Do they perform as well as the FRS only radio's? They do look small enough.

The receiver/antenna is not quite as sensitive as some of the larger older radios like the Kenwood UBZ-LF14 but it is fairly close. It takes a bit of moving around the room on different signals to tell any difference.

I have not yet tried a side by side ERP comparison. Oddly enough the T4500 puts out more power on FRS frequencies than on GMRS frequencies but not enough difference that I expect to see. FRS = 190 mWERP and GMRS = 180 mWERP.

Audio is a lot better than some of the less expensive FRS radios I've had a chance to hear.

The best thing is that they don't use Motorola's compander. That makes a lot of difference when scanning, listening to other brands of radios.

They *might* choose to become hams.. I just don't think that a truly technically oriented person will find the Internet as such very satisfying, and will find other hobbies to satisfy their technical nature. They will probably continue to use the net, but yeah, they'll probably read books too.

sir,
freebanding is NOT a hobby.

its a deliberate and amlicious violation of federal rules and regulations (those being policy, and thus according to the US supreme court, have the affact and power of law).

you want to attract attention, fine. just don't try to take others with you when you go down.

BTW, this applies to all those hams that choose to use gear on 11 meters. better make sure its type approved. If not, well, you get the picture.

That's like saying the turnips in the veggie section aren't vegetables because the sign only says 'turnips'. Or that turnips have all the characteristics of a vegetable -only- because they are sold in the vegetable isle. I don't know about you, but I think turnips are sold in the veggie isle not because they are -like- vegetables, but because they ARE vegetables. And rules, regulations, statutes, ordinances, acts, codes and charters are not just -like- laws, they ARE laws.

I didn't have much trouble with either. But I did spend far more time learning
the theory than I did learning the code. Part of the reason for that was I
didn't know much of either when I got started.

I have known individuals who had trouble learning theory as well as code. One
ham I helped took the old Advanced written no less than 9 times before passing
it. He was a successful professional who simply wasn't very good with math,
particularly algebraic formulas.

He's not a rare case.

>not possible. I don't know whether 13wpm is possible or not. I read about
>it years ago but can't remember where the break point was for the visual
>blending.
>
Let's take a look at dit times:

At 5 wpm, the keydown time for a dit is 12/50 seconds, or 240 milliseconds. That's a little more than 2 dits per second.

At 13 wpm, the keydown time for a dit is 4.615/50 seconds, or 92 milliseconds. That's a little more than 5 dits per second.

At 20 wpm, the keydown time for a dit is 3/50 seconds, or 60 milliseconds. That's a little more than 8 dits per second.

Visual blending depends on the individual, but is around 20 flashes (dits) per second.

Motion picture speed is 24 frames per second, but to eliminate flicker ecah frame is flashed on the screen twice by means of a rotating shutter. So the effective flash rate is 48 per second. NTSC television refreshes the screen 30 times per second, but the refresh pattern is interlaced, (odd lines one time, even the next) so the effective flash rate is 60 per second.

>Automatic upgrades would be inappropriate.

We know from experience that FCC won;t go for it, either. Back in 98, ARRL proposed giving existing Novices and Tech Pluses Generals. FCC said no.

>There is material on the Tech
>written that was NOT included in the Novice written.

Heck, there is a lot of current ham dtuff that wasn't on my 1970 Extra written or any of the preceding writtens I took in 1967 and 1968. Nothing on those old tests about VECs,RF exposure, repeaters, satellites, frequency counters or WARC bands, as I recall. Lots of stuff on keeping a log, IDing properly, and technologies that are considered "vintage" today. FCC is perfectly happy to keep renewing my license without any more tests, because I have a clean record. FCC is willing to assume that I and hundreds of thousands of other hams have kept current with the requirements, and that's a valid assumption.

>They can take the
>test. Any Novice that wants to upgrade to Tech (with HF) should already
>have done so. They've had the opportunity to upgrade to Tech with a single

A lot more than a decade. Since 1987 it's been just the 35 question Tech written.

>They didn't do it so they didn't want it.

Not that simple. If a Novice is primarily interested in HF, upgrading to Tech Plus doesn't get them a thing except more vanity call options.

The big unknown today is how many of those in the database are completely inactive, and only show up because the license terms are so long.

We're down to about 33,000 Novices now.

>There is NO need for automatic upgrades. As far as Advanced goes, again,
>they haven't been tested on material that was specific to the Extra class.
>Since the reduction of the code to 5wpm in 2000, they've had 3 years to
>upgrade with a single written test if they wanted to. They didn't do it so
>they didn't want it. Again NO need for an automatic upgrade.

Since restructuring, the percentage of Advanceds has decreased far less than
the percentage of Novices, which is a puzzle.
>
>Should the Element 1 requirement be dropped, the simplest thing is to simply
>keep the bands and privileges of Novices, Generals, Advanced and Extras
>exactly as they are now. Change the Tech to get the privileges that the old

>privileges plus 15m, 40m, and 80m code privileges.
>
>This would keep the rule changes simple and accommodate all current
>licensees.
>
Simple, yes, but is that what's best for the ARS? What such a structure creates
is an amateur radio license structure that makes VHF/UHF easy to attain and
HF/MF much harder. Is that a good thing?

And of course the persistance of the light source used for a CW reader would need
to be considered. I'd use an LED rather than a lamp

No, Eric has it rght. Rules and regulations carry the force of law. None has been considered and passed into public law, rather a single law confering onto those rules and regulations the force of law.

Why are you so concerned about COMMERCIAL radio broadcasting
practices? Such practices don't involve any amateur radio activity
anywhere. By definition, US amateur radio is prohibited from any
pecuniary compensation (that's why the word "amateur" is there).

If you have investments in radio broadcasting, try a different
newsgroup for your bitching and whining about COMMERCIAL
radio.

>Visual blending depends on the individual, but is around 20 flashes (dits)
>per second.

The correct term is "persistence of vision." :-)

The actual persistence threshold varies with individuals and can
go down to 15 "flashes" per second. That seems to be a combined
function of the retinal cells and cerebral visual cortex.

>Motion picture speed is 24 frames per second, but to eliminate flicker ecah
>frame is flashed on the screen twice by means of a rotating shutter.

Not quite. The shutter is there to blank the "pull-down" time when
the geneva mechanism and pawl yank down the next frame. The
intermittent movement requires a free loop of film before and after
the shutter mechanism so that the supply and take-up reels can
move at an approximate constant rate. Note: A geneva wheel may
not be used in cheaper projectors but was standard in cinema
projectors for decades; there are other, simpler pull-downs.

Motion picture frame rate standards are still 24 per second and that
is what nearly everyone sees. That's a comporomise between the
maintenance of persistence of vision and length of film needed for a
given time.

>So the effective flash rate is 48 per second.

For nearly all film projectors and editors, it is still 24 per second.

>NTSC television refreshes the screen 30
>times per second, but the refresh pattern is interlaced, (odd lines one time,
>even the next) so the effective flash rate is 60 per second.

Not in the human perception. The effective IMAGE "flash rate" is still
30 per second for the US NTSC system and the rest-of-the-world's
PAL system at 25 per second. Human persistence of vision will
blend the interlaced display lines (if a fast phosphor is on the CRT)
to yield a better vertical definition of the image.

For a TFT or LCD display, the materials used in the display screen
may cause a longer persistence than the average CRT phosphor.
The internal TFT or LCD display temporary visual memory RAM is
considerably faster and could easily update an entire image in less
than the time of vertical blanking even using an 8 Megapixel image
standard.

In the old Dumont TV "Film Chain" (combined film and slide pickup
unit, two of each), there was no film shutter at all and the film looped
through the projection-equivalent portion at a constant rate. To do the
conversion from 24 to 30 frames per second, Dumont used a rather
expensive cylindrical lens which had precision wedge lenses around
the cylinder. The action was to overlay one film image over the next
one, always two image frames overlayed at the pickup point. The
spacing of the wedge sections caused the image conversion rate of
24 per second to 30 per second...and could also convert 24/sec to
25/sec for a PAL system. The cylinder of lenses was driven by a
synchronous motor. The light source was a "flying spot" CRT (fast
phosphor) and the pickup a photomultiplier tube.

Now, none of what you wrote involved "Morse Code Test May Not
'Die' at ITU Conference" but you did state a number of innaccuracies
and those were simply corrected.

An LED is considerably faster in on-off rate than an incandescent
lamp (can do 100 to 20 microseconds). A neon lamp (such as the
NE-2 indicator) is nearly as fast as an LED. Neon bulbs driven from
an amplified microphone were the light source for the Conn
"Stroboconn" musical pitch indicator. A patterned wheel driven by
a synchronous motor operating off the primary power AC allowed a
comparison of amplified musical tones to the correct pitch by viewing
the rotation of the particular note's pattern. An early, special-purpose
frequency meter. :-)

Some LEDs can be used as variable-capacitance diodes if reverse-biased. Several radio amateurs, notably those in the UK and Europe have used those, but those must be selected; larger LED structures seem to work out better in this regard.

GOTA GODI ... keep the US ARS a living museum of radiotelegraphy!

Bullshit.

There are MANY FRS/GMRS hybrids on sale at Wal-Mart, K-Mart, etc. You
CAN use them on the FRS freqs without a license.

You could use them on the GMRS repeater output freqs (and a very few
of the hybrids are even repeater-capable), but they are not very
useful on those frequencies in most environments... so don't bother
using them on those freqs, and don't bother licensing them.

The GMRS capability on the integral-antenna GMRS-FRS hybrids is
bascially a marketing gimmick, created so that the radio manufacturers
can claim "5 MILE RANGE!", and claim "22 FREQUENCIES"!

Then they are laws. If it looks like a duck, swims like a duck, quacks like a
duck....

> None has been
>considered and passed into public law, rather a single law confering onto those
>rules and regulations the force of law.

Well, I checked with Webster:

law -- 1. all the rules of conduct established by the authority or custom of a
nation, etc. 2. any one of such rules. 3. obedience to such rules. 4. the study
of such rules..... ---"lay down the law" 1. to give orders authoritatively....

I also looked through a few online law dictionaries:

http://www.duhaime.org/dictionary/dict-l.htm#L
http://dictionary.law.com/definition2.asp?selected=1111&bold=||||
http://dictionary.lp.findlaw.com/scripts/results.pl?co=dictionary.lp.findlaw.com&topic=7e/
7e837b5d2a954e82f31227c53fd80b3b
http://august1.com/pubs/dict/l.htm

So they all say pretty much the same thing -- if it's enforcable, it's a law.
Maybe you can find something that says something different?

That is true,

>You CAN use them on the FRS freqs without a license.

That is not true.

Go and learn a little FCC law in the area of FRS and type
certification and then come back and talk to the folks who do
understand the law.

Yes

Why ?

Because I have better things to do in life than study for a mode of
operation (CW) that I will rarely if at all use.

This does not mean that I do not respect anyone who has mastered CW and uses
it on a regular basis.

I glad to hear you are enjoying one aspect of our hobby.

My "something else" has been family, long work days, and the constant challenge of proving that amateur radio is part of the emergency communications solution to Nextel and Blackberry laden county officials.

The average person couldn't care less about amateur radio. The guy next door is busy screaming at his ex wife on the phone, downing Prozac with beer chasers while watching the baseball game.

For those of us interested in communications, well I'm sitting here in front of a recently overhauled TS-430S with the mike disconnected and placed in a desk drawer until the time I qualify for HF transmissions, listening to amateurs with HF privileges talk about their latest operations or hemorrhoid attacks, belching and farting, discussing their sex life, preaching hell and damnation, refusing to give up a frequency for local emergencies.

Why in &pandas name would I want to get HF privileges for this cesspool ?

Here is text from the Motorola Users Manual for the T4500:

"The FCC requires that all operators using General Mobile Radio
Service (GMRS) frequencies obtain a radio license before operating
their equipment."

I have two questions about this:

(1) FRS channels 8 - 14 are not GMRS frequencies. Would not the above
strongly infer that use of those channels do not require a license?

95.194 (FRS Rule 4) FRS units.
(a) You may only use an FCC certified FRS unit. (You can identify an
FCC certified FRS unit by the label placed on it by the manufacturer.)

The above rule does not say that a GMRS radio may be used on FRS
frequencies. Only FRS radios are allowed.

(2) Does this not infer that a hybrid radio can only be an FRS radio
on FRS channels 8 - 14?

Mike

Much as it may seem strange for me to admit, but in
reality, even if S25.5 is dropped completely, that does NOT
require any rule change since the FCC "could" still keep code testing
without violating the treaty.

Which, if true, should prove to be a good incentive for
some hams to learn CW even though there isn't a mandatory
test.

My MOS (31M) didn't have it either. However, there were still classes in the early 1970's at Fort Gordon. I have no idea what MOS is was for. But, you are right - that was many years ago.

That sounds like some of the nonsense we used to pull to get out of work. For example, we volunteered to go pick up a guy transferring in from another unit 40 miles away. It took us more than two days, with an overnight visit to a nearby large city, to make the trip. However, it didn't help that we were using the jeep assigned to the orderly room for all this and arrived back to the unit without the person we were supposed to pick up. Needless to say, they didn't send us back to go get him. :)

So CW doesn't get through when everything else will?

Now I've heard it all.

Where's Aaron Jones and his Morse Myths List when you need him?

That is true on FRS Channels 8-14.
>
>(2) Does this not infer that a hybrid radio can only be an FRS radio
>on FRS channels 8 - 14?

If the "hybrid" radio is type certified as a FRS radio AND a GMRS
radio (FCC type certification, not the manufacturer's advertising
claim) then it can be used on FRS channels 1-14 without a GMRS
license or on any GMRS channel in the radio with a GMRS license.

Again the Commission screwed up by interleaving a licensed service
with a non-licensed service.

73 de K2ASP - Phil Kane

==========

COAST STATIONS NMC, KPH AND KFS WILL RETURN TO
THE AIR USING MORSE CODE

For the first time since 12 July 1999 listeners around the world will
have the opportunity to hear three historic US coast stations on the
air using Morse code.

On July 1st, Coast Guard Communications Area Master Station Pacific
(CAMSPAC), Pt Reyes will retire the historic "Sparks" from the
Telecommunications Specialist Enlisted Rating Badge, as the Coast
Guard restructures its work force replacing that specialty with two
others, the Operations Specialist and the Information Technology
Specialist.

As a special part of the ceremony surrounding this change NMC will
return to the air using Morse code (CW) and possibly radioteletype
(RTTY). These services, once the mainstays of Coast Guard
communications, have been retired for several years but will be
reinstated for this ceremony.

At present the frequencies known to be authorized for NMC are 8574kc
and 500kc with the possible addition of 488kc. Additional HF
frequencies may be authorized by the time of the event. Those
wishing the latest information about NMC frequencies and times of
operation should write directly to TCCM Loren R. O'Banion at
LObanion@d11.uscg.mil .

The public is invited to visit NMC to participate in this event. The
unit's Receiver Site, located at 17000 Sir Francis Drake Blvd on the

Pt Reyes National Seashore will be open to the public between the hours of 9am and 3pm. Persons wishing to attend must RSVP to (415) 669-2004.

KPH will activate its HF and MF transmitters to participate in this historic event and to give listeners the opportunity to hear three US coast stations on the air - possibly for the last time. KFS will also return to the air on a single frequency.

KPH will transmit on 6477.5, 8642.0, 12808.5 and17016.5 on HF and on 500 and 426kc on MF. KFS will transmit on 17026.0kc. These frequencies have been made available through the generous cooperation of Globe Wireless, the current owner of the KPH and KFS licenses.

KPH and KFS operators will listen for calls from ships on 6276.0, 8368.0, 12552.0 and 16736.0 on HF and 500kc on MF.

Reception reports for NMC may be sent to:

USCG CAMSPAC Pt. Reyes
ATTN: LCCT O'Banian
1700 Sir Francis Drake Blvd. , POB 560
Point Reyes Station, CA 94956-0560
USA

Reception reports for KPH and KFS may be sent to:

Ms. DA Stoops
P.O. Box 381
Bolinas CA 94924-0381
USA

Yes indeed, the owners are the very folks who have promoted all this. And before
long the owners will number a very few, with such changes in regulations. The
COMSUMING PUBLIC might just be a bit concerned with that.

BTW, betecha I've spent more time in keeping more COMMERCIAL radio stations on the air than you have, Putzy Poo!

It really wasn't necessary for you to, once again, put forth so much effort to show, yet one more time, that you're a trolling, dorky dumbass, most of us reading here already knew that.

You just *might* dilute the crud a bit, you know. Every proper ham who gets on the air helps to do that. First thing you know, we may actually have normalcy again.

Youi know what it would take for just exactly that to occur? ONE WORD from the right place. Just as happened when we got the medical waivers. The source of that work is the key. Will it happen? I doubt it.

the laws.

The idea that rules and regulations are not laws is a fallacy that is coddled by anti-government malcontents. Their battle-cry is that the Constitution doesn't provide for the making of 'rules' or 'regulations', only 'laws', a semanitic spin based on the definition of 'law'. I really don't think that the authors of the Constitution intended the document to be legally interpreted by dummies, which is why they created the Judicial branch of government. And that branch has NEVER -- not ONCE in over 200 YEARS -- excluded from the definition of 'law' any rule, regulation, code, ordinance, or any other binding authority simply because it didn't include the word 'law' in the title. So no matter how -you- choose to define the word, the meaning is very clear to the rest of us, as well as to the US Government. But if you have a different definition, please post it.

Their trying to raise the sales tax here, also
just raised the vehicle registration fee 3X. It's
going to cost a couple of hundred dollars just
to reg. my bike, I'm going to hate to see what
it's going to cost for trucks.

This is precious!

What an IDIOT you are, Stewie! And this "MURS/FRS will Save The
Radio Hobby" crusade you're on his hillarious!

Absolutely assinine idiot...Unabashed...complete and without
reserve...

Go ahead...Let's see YOUR interpretation of the law, then let's
hear from the fella who helped to WRITE those laws! I wonder who has
the better understanding...?!?! Well, no, not really, but it will be
fun to watch you flail about trying!

Steve, K4YZ

>
Nowadays it does, but I'm talking about back when the problem started - the 1970s. "Freebanding" or "HF-ing" is not a new thing at all.

Back then Techs had no HF at all, and Novices had no 'phone at all. 10 meters was not so heavily used as today because every US ham who had 10 meter access also had access to every other US ham band, all modes, full power.

So it was a natural for those "HF-ers" to gravitate to 10 meters. They could use the same antennas and amplifiers they'd used on ~11 meters.

It was thought that giving Techs and Novices 10 meters would promote use of the band and help keep the unlicensed out.

Not at all, Bill. It simply means that FCC did not accept the arguments as
being sufficient to keep any code test except 5 wpm.

I think FCC had its mind made up on that score back in 1998, if not before.

I have NEVER understood how someone can make a statement like that. How do
you KNOW you won't like it if you do learn it?

Don't you see your cutting yourself off from a major part of ham radio based
on what?

Jim,

It is rampant along I-85 in the Charlotte/Atlanta corridor, I-77 thru
Columbia, SC, and I-20 at least
to the Georgia line. Truckers regularly beep and squeak their way on 28.085
along with abandon.
I am of the belief that if WE, the licensed users, do not take an active
role in preventing such abuse
of our band assignments, this problem will continue to get worse. After 10
and 12 Meters, it will
spread to 17 meters, onto 20 Meters and so on. It is really up to us to take
an active part to protect what we worked hard to obtain; if we don't, who
will?

>you are right - that was many years ago.

The "31M" MOS is still used in the US Army.

Last time I was at a field signal communications in operation was
at Fort Irwin, CA, back in 1989 as a civilian. They weren't using
any CW keys back then or even coming close to OOK CW modes
for anything. Fort Irwin was then, and remains, the Desert Warfare
Training Center...graduates would, in two years, bust the armor
of the Iraqi invaders of Kuwait and much later, other graduates
would use lessons learned to out-panzerfaust them in the second
Gulf War, sweeping right to the capital of Iraq in less than 3 weeks.

There's still a bunch of anal retentive amateurs in here who, never
having done a single bit of military communications, profess to be
absolute, self-righteous "experts" on How Things Are Done. They
are unable emotionally to come to grips with change or any
challenge to their very important amateur titles, rank, status
obtained a rather long time ago...and they keep on demanding that
all others DO AS THEY DID by working hard, knuckling under to
demands of seniors of that time, and following some fairyland
concepts of "proper radio operation" in an advanced age well
beyond the standards and practices of the pre-WW2 times.

The Living Museum of Amateur RadioTelegraphy is still
around, still kicking but now twitching in the onset of rigor mortis
and refusing to give in. We will have to crowbar their keys from
their cold, dead fingers. There are lots and lots of crowbars out
there. Attrition is slowly reducing the beepers' numbers.

Bye bye morsie.

FREEBANDING was all the rage in the 1920s.

Put the keys in the old Desoto and start up "200 Meters and Down."
:-)

>Back then Techs had no HF at all, and Novices had no 'phone at all. 10 meters
>was not so heavily used as today because every US ham who had 10 meter access
>also had access to every other US ham band, all modes, full power.

Darn Techs anyway...didn't learn enough morse to qualify as the Masters
of Radio working DX on (lower) HF with CW!

Novices had to work and slave in the small back rooms until they got to
be like the Masters of Radio. Apprentices...just not respecting the
mighty Masters. Tsk, tsk.

>So it was a natural for those "HF-ers" to gravitate to 10 meters. They could
>use the same antennas and amplifiers they'd used on ~11 meters.

Class D CB became a radio service back in 1958. Ever think that had
anything to do with it? :-)

>It was thought that giving Techs and Novices 10 meters would promote use of
the
>band and help keep the unlicensed out.

It should have...darn Techs and those apprentice Novices, not properly respecting the Masters of Radio! They should have Learned Their Place (way back in the bus)!

Morse code will never die...it just slowly beeps away...

Go thee and "comsume" little man of la mancha.

You have lots of imaginary windmills to destroy.

>> Such practices don't involve any amateur radio activity anywhere.
>
>Do tell! One could easily wonder how it is that you know that.

Easy. US civil radio information is freely accessible to all.

Your problem is, Dick Quixote, one of living in the past too
much, following standards and practices of the past, thinking
those will apply forever more. You've developed a fairyland of
myths about morse and think (wrongly) that amateur radio is
the center of the radio universe. It isn't.

>> By definition, US amateur radio is prohibited from any
>> pecuniary compensation (that's why the word "amateur" is there).

Tsk, tsk, there you go, "COMSUMER." :-)

By the same token, those "consumers" who MIGHT want to get into amateur
radio also...AND already have extensive experience in non-amateur radio.

As one of the anal-retentive Masters of (CW) Radio, you are reminded that
this whole newsgroup is about AMATEUR RADIO policy, not commercial.
The minute you go commercial on the ham bands is when the Posse
Commitatus of Hamdom is going to Get You! :-)

> BTW, betecha I've spent more time in keeping more COMMERCIAL radio stations
on
>the air than you have, Putzy Poo!

"Betecha?" My name is not "Betecha," DICK.

I can show no less than ELEVEN separate, distinct radio stations on the
back of my First Class Radiotelephone (Commercial) license certificates,
one of those being one I co-owned. That's just in US civilian radio. It
doesn't count the RF emitters involved in US government contracts.

> It really wasn't necessary for you to, once again, put forth so much effort
to
>show, yet one more time, that you're a trolling, dorky dumbass, most of us
reading
>here already knew that.

Poor baby. Resorting to puerile little epithets again? Tsk, tsk, tsk!

You MUST stop messaging with that mirror in front of you. You are
describing the image seen in that mirror, not the folks who are
writing messages in here.

A term which is actually a misnomer:

http://www.grand-illusions.com/percept.htm

> The actual persistence threshold varies with individuals and can
> go down to 15 "flashes" per second. That seems to be a combined
> function of the retinal cells and cerebral visual cortex.
>

>>Motion picture speed is 24 frames per second, but to eliminate flicker ecah
>>frame is flashed on the screen twice by means of a rotating shutter.
>
> Not quite.

How "not quite"?

Modern standard sound motion pictures run at 24 frames per second. But each frame is flashed on the screen twice, so there are 48 images per second on the screen. A two-bladed rotary shutter is usually used in the projector.

In the early silent film era, a speed of 16 frames per second was common, and a three-bladed shutter was usually used in the projector. Again, 48 images per second.

> The shutter is there to blank the "pull-down" time when
> the geneva mechanism and pawl yank down the next frame.

That's not the only thing the shutter does. It also blanks the screen halfway between pulldown intervals so that each frame is flashed on the screen twice.

> The
> intermittent movement requires a free loop of film before and after
> the shutter mechanism so that the supply and take-up reels can

Irrelevant to the discussion.

> Motion picture frame rate standards are still 24 per second and that
> is what nearly everyone sees. That's a comporomise between the
> maintenance of persistence of vision and length of film needed for a
> given time.

48 images per second. See:

http://www.bbctv-ap.freeserve.co.uk/supfr3.htm

or any reliable reference on motion picture projection.
>
>>So the effective flash rate is 48 per second.
>
> For nearly all film projectors and editors, it is still 24 per second.

Incorrect.

You're simply wrong on this, Len. 24 frames per second, 48 images per second.

Be a big boy and admit it.

>
> 73 de Jim, N2EY

Yes. Activity on HF/MF can be heard around the world on a regular basis where with VHF/UHF that seldom happens (yes I know satellites change that but the passes are so short, exchanges must be short). Thus it should be more difficult to get on the HF/MF bands. In this area we are supposed to represent a good image of our and so we should make an effort to insure that people value their ticket enough not to jeopardize it by making it somewhat difficult. We won't succeed 100% but it will be better than if we don't try at all.

Besides that the General written test is only slightly harder than the Tech written so it wouldn't really be that much harder to get on HF voice bands. If one were to learn everything in the "Now You're Talking" book, it is possible to pass the General from that alone. For example, this book contains information on the band privileges of all license classes, etc. It also contains all the equations that are used on both the Tech and General exams.

This weekend's Field Day was a prime example of the benefits of CW. Bands were very poor most of the weekend and the voice stations struggled to find contacts late in the event. Our CW stations far outstripped the voice stations in total number of contacts.

It's a slang for 12 Watts P.E.P., which is the max legal output on 11-meter
CB radio in SSB mode.

Maybe.

Or maybe S25.5 would have not been revised in 1992 if it was on the agenda,
conference wasn't postponed, etc. Remember that back in '92 the maritime folks
still had CW/Morse capability required on all ships over a certain size.

I think the delay actually worked FOR the total elimination of code testing.

>Something else happened in the interim, an explosion in
>Internet use, which has changed the landscape.

Which would have happened regardless of S25.5.

To paraphrase and expand on a statement by W3RV, amateur radio will continue to
exist because of things it offers that cannot be done with the internet, email,
cell phones or inexpensive long distance telecommunications. Toss in GMRS/FRS,
too. Example: most of the folks who got ham licenses for honeydew purposes in
the '80s and '90s now have cellphones for that job. There's no point in running
routine phone patches when you can direct dial for a few pennies a minute.

Amateurs, by definition, have to build their facilities with discretionary
money, time and other resources. And no hope of any financial return. Which
means they have to really want to do it or it's just not gonna happen. Classic
"bell the cat" situation.

It appears that it will be modified to make code testing optional, which has pretty much the same effect as dropping it, but legitimises the decision of certain countries to keep it (principally Germany and certain parts of the old communist bloc).

We all know that the FCC will be deluged with petitions, ranging from the sublime to the ridiculous. In the face of actual ITU rule changes, it is unlikely that they will respond by changing nothing. When the dust settles they are likely to drop element 1. The question is - what else will they change (if anything)?

Me too. Our club was a 3A with a satellite station and a QRP 'GOTA'
station. I was using the QRP rig on phone, supervising Techs and my son
(no licence yet). It was 3 hours after I got there that I realised it was
set to 2 1/2 watts instead of 5! That gave everyone a good laugh. We still
worked quite a few sections on a QRP rig set to half power, and without
having to use funny bleeping mode.

Absolutely. It changed it from an odds on probability to a near certainty.

Don't forget though that the maritime CW phasing out period began way back
in 1987, although it wasn't completed until 2000 (and some would say,
isn't complete now, despite no testing, distress watch, etc.).

The one I was at was 11A MDC, and the one up the road was 37A MDC!

Would have been nice if CT took more then 32 and accepted F.

160 was noisy last night. We had a storm south of us in Virginia.
How the hell did folks ever talk on 160 with AM back in those days?

I was sitting at 160 phone during the storm to the south. I saw about 85 contacts by 0500Z (0100 EDT). About 100 watts to a dipole. Half scale static. My ears were hurting!!! Between the two of us experienced sidebanders, it was rough.

Yeah, so what, my sideband ear comes from 11 meters. <G> Talk about pileups! Call CQ on 38 USB sometime. Try to run our SSB CB net when the skip is in. I can tell who it is by voice, even if I can't make out what they said, just by them calling CQ. I know who it is even if they're f-ing around, trying to change their voice. 26 years on a radio. They can't hide. I hear the old CBers on 2 meters all the time.

There are many dual operators in this area. When one part is dead, the other is alive. I only use sideband on part 95. AMers suck. <G>

Stop obsessing on that which you know nothing of. Anyway, Stewart, you are the idiot that insisted on posting the FRS/GMRS crap here - even though it is "Class A CB" and therefore belongs on "rec.radio.cb", and your MURS crap which has NO appropriate place because we all know it is NOT a legitimate radio service, but a manufacturer's mistake that the FCC bought into.

Regardless, not everyone here remains in favor of Morse Code. If there were a "codeless extra" available, then I might have one! That's how little I use morse code. Unfortunately, my license history ruins that - it shows that I have at least 13WPM (having held an Advanced class from 1993 to 2000). :-(

Personally, I find it antiquated, but it may come in handy in a "survival situation" where a canibalized radio is no longer capable of voice comms.

Odd, very odd. A requirement that is completely optional is the same as no
requirement at all.
>
>We all know that the FCC will be deluged with petitions, ranging from the

All depends on what is requested. If all that is requested is an end to code
testing, FCC can just drop Element 1 and make no other changes.

Is that what's best?

Well I don't have the club's totals (club call W8HP with our GOTA station on
W8JXU) but our CW guys did well and I took a turn at both of our CW
stations. We ran 5A at a nearby park that is used as a Scout camp at times
(bunk beds to sleep in and a place to cook, Yay!). For 20m CW and phone,
the count was near 300 each although the voice didn't really pick up until
late this morning. 80 and 40 CW were good but voice was very modest. My OM
picked up one CW contact on 15m this morning and one on 6m yesterday. There

wasn't more than a couple dozen voice contacts on 15m, 10m, and VHF combined.

However, there's always a silver lining. Most of us got a pretty good night's sleep since the bands were poor. Today, we knocked down most of the antennas and stations early and just kept our 20m ones running until time to quit. That left only a minimal teardown to do this afternoon.

I don't know the details, but we made 200 phone QSOs, and over 100 CW, but
we were a 3A. We had a TS-2000, an FT-817 and whatever the CW guys were
using! Antennas were an R7 and various dipoles.

Ryan:

Data transmitted over Amateur Packet Radio is not permitted to be
encrypted. Equipment to receive and decode AX.25 packet radio is
widely available, even to the news media, so that is not what I would
consider to be a legitimate concern. Any mode used by hams to
transmit data over the air must be considered to be wide open to
monitoring by anyone capable of acquiring the off-the-shelf technology
necessary to receive it.

Dick:

Hmmm -- I didn't consider the fact that the FCC must have approved the
FRS/GMRS combo rigs for manufacture and sale. Howver, I would
ass-u-&-me that they intended the purchasers to get the GMRS ticket
before utilizing that capability. If they approved them knowing full well
that they would be "inadvertently" creating thousands of potential GMRS
bootleggers, perhaps they figure that it would a good excuse to get themselves
out of the business of regulation and enforcement of GMRS operation,
thus saving themselves one more administrative burden linked to a
radio service with little or no economic significance.

Steve:

I enjoy all aspects of our hobby -- with the possible exception of endless
yakking on HF phone! Each year, I am my radio club's Field Day Digital
Mode Captain. I am also involved in Skywarn (ID # PLH010) and I am a
control operator for our repeaters. I have all the other "something elses"
in my life and always had, however, this didn't stop me from acquiring and
practicing the essential skill of Morse/CW operation! I just find it amusing
how often the "no-coders" pull out this tired old EXCUSE! I have no doubt
that if you somehow found the time to learn the code and use CW on the
air, that you would also learn how valuable a communications tool it can
be -- especially in emergency communications! The best part is, with
the International Treaty code proficiency requirement soon to be cancelled
by the ITU, and the FCC requirement soon to follow, you will no longer
be able to complain about it being "shoved down your throat" -- another
traditional "no-coder" complaint!

why are you comparing apples and tomatoes then?

the rules are clear, unless you have a license to operate in the section
from 27.405 - 28.000 (which I KNOW for a fact no one here does), you open
yourself up to litigation from the FCC, any commercial concern that may
have operating privileges there or even the military (which does have some
allocated spectrum there) this applies also for any frequency below 26.965
clear down to 12 meters (mostly commercial and marine band HF stuff).

you don't have the letter from the FCC saying you can operate there, its
the same as not having a license to drive a car on any street in america
(radio operations are a privilege, not a right and onyone spouting
otherwise really doesn't know what they are talking about).

if you want to show me where in the fcc rules it states that you can
operate there, be my guest. otherwise, stick to 11 meters (the class D
channels if you please) or get your ticket (amateur radio) and rgchew with
a bunch of us on bands you only dreamed of operating.

DE N7ZZT
Phoenix, Arizona

p. field day was a blast. I made several contacts on 6 meters from here to
south texas and even florida (on 25 watts and a homebuilt 2 element beam!)

3632. Technicians on 5Mhz?

Newsgroup: rec.radio.amateur.policy
Date: 2003-06-30 04:43:16 UTC
From: k0hb@arrl.net
Message-ID: <e79dbd9b.0306292043.3ad83295@posting.google.com>
Source record: 69782

Since Morse code is not an authorized mode on the 5MHz ham channels which open this week in the US, could a petition to allow non-morse-tested amateur radio licensees (Technicians) on these channels during FCC declared emergency communications be adopted by FCC? (Emergency comms being a prime reason advanced for the need for this allocation.) Since consideration of the removal of the ITU Morse test requirement may be delayed until a future WARC, this may issue may boil to the surface in coming months.

This would certainly open up a wider pool of available licensees during communications emergencies which might require HF operations (tropical storms, widespread floods, and similar "non-localized" emergency comm incidents).

Stow the flame-throwers for the moment, and comment dispassionately.

That thought crossed my mind. If some time in the future FCC
decides to merge GMRS and FRS we'll know. Since FCC gets none of the
income the GMRS licenses generates, they prolly couldn't care less about it,
comparative pittance that it amounts to in total anyway.

Frankly I wouldn't expect it for the singular reason that S25 still
exists and
FCC has shown itself loath to violate the letter of the treaty so far. I
doubt that'll change, probably S25 will first.

And, in a real emergency the rules allow use of whatever communications
are available.

Besides, dammit, five discrete HF channels will likely be overloaded with
all those who "didn't get the word". I know, emergencies are routinely
handled on a single HF channel, but they also routinely have difficulty
keeping the duffers off the emergency frequency, even with all that wide
open real estate out there to QSY to.
It'll be real interesting to watch the first 5 mhz disaster net unfold.

A radio station on the East Coast is supposed to involved also. There is also supposed to be at least one, perhaps more, simulated messages sent based on some actual messages sent many years ago. Each of the stations involved will respond to those messages. I have no details, but listen for all this just in case.

They had to use lions somewhere in the movie - lions seem to be a
Hollywood staple. After all, they had plenty left over after the old Tarzan
movies. Perhaps they just cut their hair, applied a little makeup, and
called them tigers. :)

I think they could if they wanted too. But, others argue that the license
is for amateur operators, therefore it must follow S25.5. The 5mHz
frequencies are not allocated by ITU to amateur use. My question is
"does S25.5 follow the person or the ITU amateur frequencies?"
I did not get anaswer, or I missed it.

> Since consideration of the removal of the ITU Morse
> test requirement may be delayed until a future WARC, this may issue
> may boil to the surface in coming months.

IARU reports that at WRC 2003 "no adminstration spoke in favor of
retaining S25.5". The concensus is to MOD S25.5 to:
"Administrations shall determine whether or not a person seeking a licence
to operate an amateur station shall prove the ability to send and receive
texts
in Morse code signals." I do not what the rule means.

IARU reports and supports that S25.5 will be deleted at WRC 2003,
which ends on Independance Day July 4.

Why don't we apply that mode to everything? This can fit in with the
new education initiatives

People just decide what they *don't* want to learn, and then set forth to not learn it.

Why should anyone have to learn history? That stuff is all in the past. Why should anyone learn math functions at all? As long as the calculator has batteries, you can look the formula up somewhere and plug tha numbers in. Why should I learn *anything* about car repair, I'll always be able to have someone else do it. The list goes on and on.

I fear that you're becoming forgetful in your dotage. You left out the
part about a minimum age for licensing. As far as the "ham community",
you aren't a part of it so that shouldn't be your concern.

Actually, the heart of being a "real" radio amateur is the amateur radio license. The sooner you obtain one, the sooner you'll achieve neophyte status in amateur radio.

> Morse code ability assures the ham of being primo, grade A, the
> "superiority" measured by his morse skill.

You've repeatedly demonstrated that you have a problem with anyone who might hold superiority to you in any area. When and if you ever obtain an amateur radio license, there'll be those who have more knowledge of amateur radio than you and there'll be those who are more skilled operators regardless of mode.

There are any number of radio amateurs here who have participated in
military or government communications and who have done so more recently
than you. You hold the title as being the only non-radio amateur who
presumes to tell us how amateur radio should be regulated.

> They
> are unable emotionally to come to grips with change or any

> concepts of "proper radio operation" in an advanced age well
> beyond the standards and practices of the pre-WW2 times.

Well, it's a cinch that YOU don't knuckle under. You're NOT going to
allow any "superior" type to tell YOU what to do. Of course you don't
hold an amateur radio license of any class.

> The Living Museum of Amateur RadioTelegraphy is still
> around, still kicking but now twitching in the onset of rigor > mortis and refusing to
give in.

By "Living Museum of Amateur RadioTelegraphy", I can only assume that
you mean those who use morse code. Why should those individuals give up
the use of a mode they enjoy? Why should they "give in" to someone who
isn't even involved in amateur radio in any way?

> We will have to crowbar their keys from

For once Lennie is close to the truth, and he didn't even try!

Very rarely have I had QSO's on CW that involve description of
bowel/bladder dysfunction, I've never heard anyone use profanity, and
I've never had a QSO that didn't end with kind exchanges.

If living in a "living museum" is what it takes to experience
civility, then so be it.

Lennie's pretty well made the case for not finding it on USENET.

Thanks, Putz.

Hi,

there have been a lot flames about the topic of the license issue of
FRS/GMRS. i don't want to be part of it. hence i opened a new thread.

i have just got a formal response from FCC. quote as follows, fyi ONLY!
==========

if you use only the FRS side of the radio, then you would not be required
to obtain a license. On the other hand, if you switch to the GMRS side of
the radio and transmit, you would at that point be in violation of FCC
rules.

Representative Number : ????? (marked out)

Hate to say I told you so -- but I will.

Best get an answer from the horse's mouth and ignore OPINIONS.

But then OPINIONS cost nothing and worth about as much

BINGO

I'm sure there are. The ones who post in here are exactly as I described.

>You hold the title as being the only non-radio amateur who
>presumes to tell us how amateur radio should be regulated.

NOBODY can tell the great and superior Dave Heil how to run
ham radio! Nossir! He GIVES orders, doesn't take them!

>When did you last wear the uniform of the military? How recently did
>you post your Army serial number and your rank?

What has that to do with AMATEURISM, superior being?

Why are you acting so despicably against US military veterans
BECAUSE of their military service? I didn't serve in the SS.

>Well, it's a cinch that YOU don't knuckle under. You're NOT going to
>allow any "superior" type to tell YOU what to do. Of course you don't
>hold an amateur radio license of any class.

No problem to me. Obviously to you since you seem to NEED the
"superiority" status. If you don't get reverence for being so damn
superior in everything amateur, you turn churlish, mean, and
spiteful...

Offhand, I'd say you just can't tolerate any viewpoints other than
your own superior ones.

>By "Living Museum of Amateur RadioTelegraphy", I can only assume that
>you mean those who use morse code.

No, those who go overboard in their quest to promote, venerate, and
show their superiority in a mode which a majority don't give a damn
about. The Gang of Four are such and in here.

>Why should those individuals give up the use of a mode they enjoy?

Why should they "give up using" a mode which is allowed?

I've never demanded or asked anything of the sort. You are starting
in on character assassination again, herr robust. Not nice.

>Why should they "give in" to someone who
>isn't even involved in amateur radio in any way?

:-) NO ONE at the FCC is required to hold or be granted any US
amateur radio license. The FCC can damn well cause ANY ham
to "give in" to what the FCC says. :-)

>I think it would be a safe bet to say that it'll be "Bye-Bye, Lennie"
>before we say farewell to morse code in the ham bands.

That's possible.

Of course Dave Heil is an IMMORTAL. He, like other members of
the Gang of Four, will never die. :-)

My advocacy is simply for the elimination of a morse code test for
any US radio license. I'm not after the elimination of morse code
use. You are, as usual, confused on that issue. Your problem, not
mine.

Members of the Living Museum of the Ancient Radiotelegraphy
Service will be beeping long after I'm gone. They refuse to go. :-)

>This from one whose involvement in amateur radio consists of talking
>about it, reading about it or playing SWL. How is it that you have a
>role, Leonard?

Poor baby, still pissed over not being recognized as a "superior
amateur?" Tsk, tsk.

I was doing big-leagues HF communications a half century ago. I've
been on more of the EM spectrum, used more modes of
communications in the last half century than herr robust has,
including is "service to the country" in State Department.

I MIGHT be interested in getting an AMATEUR radio license to add
to my hobbies...I've had a commercial radio license (more than just
an operator's) since 1956. But, seeing the wonderful cross-section
of "representatives" from US amateur radio in this newsgroup early
on, the thought has less and less appeal.

The prevailing thought among the wonderful "representatives" from
US amateur radio is that all MUST pass a morse code test AND
achieve a license grant in order to even talk about ham radio. Herr
robust is adamant about that...so much so that he regards opponents
to his viewpoints as well beneath his contempt. However, his
contempt for NCTAs shines in many words, is archived in many
Google posts.

Not being required in any way to use any morse code modes in the
last half century doesn't make anyone "inferior" to those who had to
test for same. Yet herr robust insists on that morse code test, if for
no other reason than his being a "superior" to "neophytes." That
is herr robust's problem, not mine.

GODI GOTA!

CW gets through when anything else will...

You can find ALL the job descriptions of US Army Military Occupation
Specialties via www.goarmy.com. Click the "Jobs" button at the top, do
the search using keywords. "Radio" keyword unrolls a lot of brief
descriptions of MOSs involving radio.

I checked and you are correct. The "31" is still there with lots of
suffixes but 31M seems to have been split up to 31P, microwave
specialist, and 31R, multi-channel communications specialist.

I can't talk much more about it since the Gang of Four DEMANDS I
be an "active participant" in something in order to talk about it. :-)
My Honorable Discharge was received in April, 1960...some in here
never served but discharge all over the newsgroup. :-)

GODI GOTA!

Morse code gets through when everything else will!

Oh goodie, an "optical expert" you are now? :-)

When were you ever an "expert" in optics in addition to doing your "electrical engineering" thing? Just curious since I was directly involved in a rather large DoD contract at Rockwell on an interferometer. Had to work with lots of high-level optical physicist types.

Methinks you have a terrible "persistence of righteousness" about your output in here. :-)

>
>http://www.grand-illusions.com/percept.htm

>>>frame is flashed on the screen twice by means of a rotating shutter.
>>
>> Not quite.
>
>How "not quite"?
>
>Modern standard sound motion pictures run at 24 frames per second. But each
>frame is flashed on the screen twice, so there are 48 images per second on
>the screen. A two-bladed rotary shutter is usually used in the projector.

Back when I actually RAN a projector in a cinema, the film rate was 24 frames per second. Back when I was actually running a 16mm projector, the film rate was 24 frames per second. Once, when I rented an 8mm projector to see some home movies of family, the film rate was 24 frames per second. While I never got a Masters in Optics, I can't ever recall any projectors that flashed on an image twice or any other multiples. All the mechanisms I've seen had the simple pawl and shutter arrangement to blank the projected image during the frame pull-down time.

The eye sees 24 frames per second and the eye-brain combination perceives motion on a frame-to-frame basis. It doesn't make any difference if the SAME frame is flashed on twice, thrice, or quadruple times. What you and everyone else sees is those 24 frames per second. The rate doesn't vary more than allowed by the internal projector rate controls.

Feel free to post your American Cinematographer's association card membership number.

>In the early silent film era, a speed of 16 frames per second was common, and
a
>three-bladed shutter was usually used in the projector. Again, 48 images per
>second.

The last time I saw any "silent films" was at the Rosenwald Museum
of Science and Industry in Chicago some time around 1950. I have
NO idea of the projector mechanism used in their "Gay 90s" section
which featured a nickelodeon.

In the "early silent film era" morse code was king for electrical
communications, having been used first for commercail communications
in 1844. There was no cinema in 1844...but I'm am absolutely positive
you are going to come up with all sorts of reducto ad absurdum
"corrections" involving camera obscuras and the famous series of
running horse photographs. All that in an attempt to prove me "wrong"
and you absolutely "right." :-) :-) :-)

>> The shutter is there to blank the "pull-down" time when
>> the geneva mechanism and pawl yank down the next frame.
>
>That's not the only thing the shutter does. It also blanks the screen halfway
>between pulldown intervals so that each frame is flashed on the screen twice.

...and you can send morse code in between the dits and dahs of
your solid-state break-in T/R switch. Of course you can. You SAY
so therefore you are absolutely correct.

>> The
>> intermittent movement requires a free loop of film before and after
>> the shutter mechanism so that the supply and take-up reels can
>> move at an approximate constant rate. Note: A geneva wheel may
>> not be used in cheaper projectors but was standard in cinema
>> projectors for decades; there are other, simpler pull-downs.
>>
>Irrelevant to the discussion.

So is the subject of motion picture projection and your "48 per second"
frame rate.

So has been your messages in other threads about trains and Chinese
adoptions and many other things which are definitely NOT about radio,
let alone amateur radio.

>> Motion picture frame rate standards are still 24 per second and that
>> is what nearly everyone sees. That's a comporomise between the
>> maintenance of persistence of vision and length of film needed for a
>> given time.
>
>48 images per second. See:
>
>http://www.bbctv-ap.freeserve.co.uk/supfr3.htm
>
>or any reliable reference on motion picture projection.

Go for it...DEMAND to be recognized now also as an optical
expert.

As far as I'm concerned, the acquaintences I have in the motion
picture industry don't agree with you. Of course, they aren't
amateurs so they "don't count" in discussions on this newsgroup.
:-)

>> For nearly all film projectors and editors, it is still 24 per second.
>
>Incorrect.

:-) Check with the motion picture standards folks. Since before WW2
the motion picture frame rate has been 24 images per second.

>You're simply wrong on this, Len. 24 frames per second, 48 images per second.
>
>Be a big boy and admit it.

What is a "big boy?" In here is would seem to be anyone who agrees
wholeheartedly with your statements. You have difficulty with accepting
corrections, being a devout morseodist.

Got your ASC card handy to prove membership in the American
Society of Cinematographers? Can you really and truly prove that
motion picture frame rate is "other" than 24 frames per second?

The eye-brain combination senses motion at the FRAME rate, not
how many times the same image blinks on during that ONE frame
still period.

The hot sun must have fried your visual cortex software during Field
Day...reboot.

3667. WRC update

Here's the latest:

http://www.iaru.org/rel030630.html

Everything looks pretty much settled except 40m. It now looks like phase 2
of realignment will be bumped to another conference, but phase 1 (i.e.
7100-7200 kHz) will probably squeak through, although we may not know
until the last minute. Keep your fingers crossed!

>Best get an answer from the horse's mouth and ignore OPINIONS.

You would be surprised at the list of WRONG replies from the
Commission that has been assembled over the years, primarily caused
by the person who replied not understanding what the answer should
have been to a legal or technical question because s/he was neither
a lawyer nor an engineer.

And the Supreme Court of the US has ruled that in spite of what
oral or written advice one gets from a government office, if the
law is otherwise, the oral or written advice is of no value and
cannot be relied upon.

The moral of the story: ask the right question and know the answer
before you ask it.

>But then OPINIONS cost nothing and worth about as much

I'll be glad to charge you for legal and technical opinions which
will hold up under all professsional scrutiny, then.

Others get it for free under the ARRL member assistance program.

This is not true in the case of the federal tax. I saw it clearly on one IRS pub, that if you filed tax incorrectly based on a response from an IRS agent, you will not be charged the penalty, even if you have to pay the right amount later.

Applying the same principle here, you **may** be right that I may still need to pay a license fee if I get caught. But I won't be fined $10000, given that I have the print-out of the official FCC email.

We need common sense other than "certificates or professionals" on what is good and bad to do. The legal and policy systems are based on common sense eventually.

Thomas

No, I don't. Can you point to an example where I've done so, Windy?

> NO ONE can tell you what to
> do! Ever!

Not much since my retirement. I can grant you some advice without
charge, Leonard: You won't make a dent in what goes on in amateur radio
until and unless you become a radio amateur or get a part-time job with
the FCC. Those things aside, you're simply irrelevant to amateur radio.

> Sieg Heil and gruss gott, herr robust.

You're still a horse's ass.

You missed the mark. You described those who have not had military
radio experience.

> >You hold the title as being the only non-radio amateur who
> >presumes to tell us how amateur radio should be regulated.
>
> NOBODY can tell the great and superior Dave Heil how to run
> ham radio! Nossir! He GIVES orders, doesn't take them!

You missed the mark. I was writing of the only non-radio amateur here
who attempts to tell radio amateurs how the game should be regulated.
I haven't given orders, but I thank you for pointing out that in the
world of amateur radio, I am superior to any non-participant.

> >When did you last wear the uniform of the military? How recently did
> >you post your Army serial number and your rank?
>
> What has that to do with AMATEURISM, superior being?

It has to do with comments you made in your last post, Foghorn Lenhorn.
If you're going to bray about others experience in military radio, your
experience is going to be up for discussion.

> Why are you acting so despicably against US military veterans
> BECAUSE of their military service? I didn't serve in the SS.

Against US military veterans? I AM a US military veteran. I'm not
required to like you because you served in the military. I find you to
be difficult to like.

> >Well, it's a cinch that YOU don't knuckle under. You're NOT going to
> >allow any "superior" type to tell YOU what to do. Of course you don't
> >hold an amateur radio license of any class.
>
> No problem to me.

...only if you want to be involved in amateur radio. You must want to be involved because you've haunted this group for years.

> Obviously to you since you seem to NEED the
> "superiority" status.

Need superiority status? Not likely. I'm sure that my knowledge and experience in amateur radio are quite superior to someone who is not and who has never been involved in amateur radio, let's say to a guy like you.

> If you don't get reverence for being so damn
> superior in everything amateur, you turn churlish, mean, and
> spiteful...

You're churlish, mean and spiteful and you aren't a radio amateur.

> Offhand, I'd say you just can't tolerate any viewpoints other than
> your own superior ones.

You believe that morse code testing in amateur (in which you are not a participant) should be done away with. You believe that there should be a minimum age for licensing in amateur radio (in which you are not a participant). You don't tolerate viewpoints at odds with your own on these issues. You believe you know more about how amateur radio should be regulated than those who have decades of experience in amateur radio. I can't believe your superior attitude.

> >By "Living Museum of Amateur RadioTelegraphy", I can only assume that
> >you mean those who use morse code.
>
> No, those who go overboard in their quest to promote, venerate, and
> show their superiority in a mode which a majority don't give a damn
> about. The Gang of Four are such and in here.

A majority of whom? Please define overboard. Please define "Gang of Four". I guess everything looks like an attempt at superiority if you can't play in the big game. Looks like you're the kid wearing a baseball uniform during football season.

> >Why should those individuals give up the use of a mode they enjoy?
>
> Why should they "give up using" a mode which is allowed?

That doesn't make sense.

> I've never demanded or asked anything of the sort. You are starting
> in on character assassination again, herr robust. Not nice.

There'd have to be a first time in order for there to be an "again".
All of your words here have been archived so you haven't a prayer of
looking like an innocent party now.

> >Why should they "give in" to someone who
> >isn't even involved in amateur radio in any way?
>
> :-) NO ONE at the FCC is required to hold or be granted any US
> amateur radio license. The FCC can damn well cause ANY ham
> to "give in" to what the FCC says. :-)

I didn't write of the FCC. I wrote of you. You don't work for the FCC.
You aren't a radio amateur. You're involved in no way with amateur
radio. :-) :-)

> >I think it would be a safe bet to say that it'll be "Bye-Bye, Lennie"
> >before we say farewell to morse code in the ham bands.
>
> That's possible.

I'm banking on "inevitable".

> Of course Dave Heil is an IMMORTAL. He, like other members of
> the Gang of Four, will never die. :-)

That'd be another error on your part. Everyone dies. If you're banking
on morse code preceeding you, you'll likely be quite disappointed.

> My advocacy is simply for the elimination of a morse code test for
> any US radio license. I'm not after the elimination of morse code
> use. You are, as usual, confused on that issue. Your problem, not
> mine.

You can understand my confusion because that isn't at all what you
wrote. If you meant something else, you didn't put any effort into
conveying it. It looks as if you created the confusion.

No one asked you to become an advocate for anything. Your "advocacy" is
self-generated in an endeavor in which you are not involved in the
slightest way.

> Members of the Living Museum of the Ancient Radiotelegraphy
> Service will be beeping long after I'm gone. They refuse to go. :-)

You can bank on the fact that radio amateurs will be using morse code
long after you're gone.

If the thought had ANY appeal at all, you could have obtained a license
in the seven or eight years you've been jawing here.

> The prevailing thought among the wonderful "representatives" from
> US amateur radio is that all MUST pass a morse code test AND
> achieve a license grant in order to even talk about ham radio.

You don't even need to pass a morse test to obtain at least one class of
amateur radio license. The test for other classes is only a piddling
five words per minute. You've talked and talked for seven or eight
years and you've admitted to a decades-long interest. You've done
diddly squat.

> Herr robust is adamant about that...so much so that he regards
> opponents
> to his viewpoints as well beneath his contempt.

No, Len. I regard you as worthy of my contempt.

> However, his

Wrong. I abide by Part 97 regulations in my radio operations. I'm licensed as a radio amateur. You aren't involved as a participant or a regulator.

Well I assume you really meant:

"How about your man on the street who just uses a GMRS for ABNORMAL
UNLICENSED communication?"

Well a radio shack page sez "The penalty for GMRS unlicensed operation is a
fine of up to $8,000".

http://support.tandy.com/support_electronics/doc31/31384.htm

Will they slap you with that much -- probably depends on the entire case and
severity thereof -- but I don't know.
But I sure wouldn't take a chance to find out.

GMRS licensed operators (like Hams) guard their spectrum jealously -- they
will and do turn in offenders.

Really want to know -- ask the FCC as they are the ones who levy the fine
!!!

Why flount the rules -- pay the $80 and don't worry about it.

You paid $___ for a driver license or did you.

Go read the case of _Richmond v Office of Personnel Management_
where Charlie Richmond relied on a written statement from the Navy
Personnel Office about what he could earn and not forfeit his
disability retirement payments, but on audit the retirement system
found that the Navy office had quoted a wrong figure, and the
penalty that poor Charlie had to pay was no pension payments for 6
months as the law specified.

This was upheld by the Supremes on the grounds that no government
agency official has the power to change what The Congress has
enacted.

>This is not true in the case of the federal tax. I saw it clearly on one
>IRS pub, that if you filed tax incorrectly based on a response from an IRS
>agent, you will not be charged the penalty, even if you have to pay the
>right amount later.

AFAIK IRS has been granted the power to waive the penalty in that case.
It's their decision, and good public relations, but they didn't have
to under the _Richmond_ decision unless The Congress ordered them to
do so.

Dieter ??

The FCC doesn't have to waive anything it doesn't want.
>
>Applying the same principle here, you **may** be right that I may still need
>to pay a license fee if I get caught.

That's locking the barn door after the horse has fled. You have to
pay it BEFORE you are caught to avoid the administrative or criminal
penalties for unlicensed operation. It doesn't take a graduate
degree in rocket science to figure that one out.

>But I won't be fined $10000, given
>that I have the print-out of the official FCC email.

If you are not in violation, no one will say anything. If you are
in violation, a "letter" won't help.

>We need common sense other than "certificates or professionals" on what is
>good and bad to do.

Common sense says that the world is flat. If you are dealing with
law or science, you need to listen to the professionals because they're
the ones who come up with, enforce, and interpret the law or the scientific
principles.

>The legal and policy systems are based on common sense eventually.

Boy, are you naive! How long have you been dealing with FCC Rules
and policy? Or even plain ol' traffic laws?

If FCC policy would have been based on common sense there would no
longer be a CB, let alone FRS or MURS or non-licensed wireless
devices, and there wuld have been adequate enforcement from the very
beginning to ensure that that was the case.

But no, certain bureaucrats 25+ years ago (and I do know the names
and faces) were looking for ways to do less work, and we spectrum
users are all paying the penalty and into the forseeable future.

<Don't get me started.>

Actually, from all the stuff I've just read, the answer is a big NO!! Apparently, the FCC doesn't even fine FM pirates big time until they've a) asked them nicely to stop, and b) possibly charged a small fine.

I'm not paying the $75, largely because I have no GMRS and no plans to buy a GMRS. If I were to buy or use one, I'd most likely purchase the permit.

We all know that there is a fine for unlicensed GMRS use. Those of us who can read and who have read more than 20 posts in this group, while there's some bickering about shared FRS/GMRS units when you're not using the GMRS channels, all know this. Sometimes you obey the rules because they are there for a reason-- this has nothing to do with the fine.

Yes, GMRS repeater owners do guard their bandwidth, but I suspect the FCC will not even respond to a complaint unless the name and the address of the offender are provided by the stoolie--oops, I mean complainant.

There don't appear to be any teeth to this fine. I suspect the FCC will eventually tear up the rulebook on GMRS, at least with regard to non-repeater capable units. I think that when this happens, GMRS users, even repeater owners, will barely notice the difference.

The maximum penalty can be issued, but in real life it may be
reduced. If there is no other problem, the initial NAL amount
(see below) can very well be in the low four figures.

In issuing a Notice of Apparent Liability to monetary forfeiture,
the issuing official is guided by a set table of penalties for
various infractions and violations, with upward and downward
factors specified. Then the subject has the right to reply, stating
why the penalty should be reduced or eliminated. Finally, the
issuing official is required to consider several factors in the
reply, including ability to pay, severity of the offense, ignoring
prior warnings, and culpability and cooperation of the individual,
in setting the amount specified in the Notice of Forfeiture.

Of course, if the subject merely fails to reply or even worse,
tells the Commission to "buzz off", then the whole enchilada is
levied. One of the most significant cases in punishing a radio
broadcast pirate started when the subject told the inspector "****
you" and the rest is history. We went all the way.

The best thing to do IS to suppress
totally the S25.5 .
Who cares about arabs and ex-USSR ??
These are not civilized countries, so
its a great mistake to consider their
wills.

They and the other 180-some-odd "not civilized countries" each have
one vote. The United States also has one vote.

Starting to see the picture?
